TABLES IN THE TEXT

Table I.—Examples of Cost and Proportion of houses measured.
Table II.—Average units of accommodation per family of given size.
Table III.—Relative standard of accommodation of uncrowded families.
Table IV.—Relative standard of accommodation of overcrowded families.
Table V.—Size distribution of overcrowded families.
Table VI.—Size distribution of overcrowded dwellings.
Table VII.—A hypothetical overcrowding standard.
Table VIII.—Overcrowding on the hypothetical standard of Table VII.
Table IX.—The City of London and the Metropolitan Boroughs and the County Boroughs arranged according to their degree of overcrowding.
Table X.—The Counties (with their associated county boroughs) arranged according to their degree of overcrowding.
Table XI.—Twenty of the most overcrowded urban areas and twenty of the least overcrowded urban areas.
Table XII.—Twenty of the most overcrowded rural districts and twenty of the least overcrowded rural districts.
Table XIII.—The variation in the intensity of overcrowding in the different classes of housing authority.
Table XIV.—Comparison between overcrowding in privately owned houses and in houses owned by housing authorities.
Table XV.—The housing authorities with the greatest degree of overcrowding in houses owned by such authorities.
Table XVI.—Density of occupation in houses owned by housing authorities.
Table XVII.—Numbers and sizes of overcrowded families in houses owned by housing authorities.

HOUSING ACT, 1935

REPORT ON THE OVERCROWDING SURVEY IN ENGLAND AND WALES

Introduction

1. Sections 1 to 12 of the Housing Act, 1935, together with the First Schedule, contain the specific provisions of that Act for the abatement and prevention of overcrowding. They set up a standard by which overcrowding is to be measured and provide for the fixing by the Minister of Health of "appointed days" after which, subject to suitable safeguards, it will be an offence to infringe that standard. A summary of these provisions will be found in Part I of Memorandum B on the Housing Act, 1935, which was issued to local authorities on 22nd October, 1935, and has been placed on sale. This Report contains a sufficiently detailed description of the overcrowding standard and of the method of survey and forms used to make it complete in itself without reference to Memorandum B.

The first step in the campaign to abolish overcrowding was the carrying out of a survey by every housing authority to ascertain the extent of overcrowding in their area and the places where it existed. Section 1 (1) of the Act provides as follows :

" (1) It shall be the duty of every local authority before such dates as may be fixed by the Minister as respects their district, to cause an inspection thereof to be made with a view to ascertaining what dwellinghouses therein are overcrowded, and to prepare and submit to the Minister a report showing the result of the inspection and the number of new houses required in order to abate overcrowding in their district, and, unless they are satisfied that the required number of new houses will be otherwise provided, to prepare and submit to the Minister proposals for the provision thereof "

On 19th November, 1935, the Minister issued a circular to all authorities with the exception of the metropolitan boroughs informing them of the dates he had fixed under the Section. The dates were as follows :—

- | | |
|---|-------------------|
| 1. For completing the inspection of the working-class houses in the area of the authority .. | 1st April, 1936. |
| 2. For preparing and submitting to the Minister a report shewing the result of the inspection .. | 1st June, 1936. |
| 3. For preparing and submitting to the Minister proposals for the provision of any new houses required for abating overcrowding | 1st August, 1936. |

In the case of London, in view of the special provisions in Section 21 of the Act regulating the respective duties of the metropolitan boroughs and the London County Council, the dates fixed were slightly different. Although the metropolitan borough councils were the authorities for carrying out the survey, the results of the survey had to be submitted to the London County Council for consideration and for transmission by that Council to the Minister. The date fixed for the completion of the survey by the metropolitan borough councils was 1st April, 1936, and the date fixed for the submission by the London County Council to the Minister of the report on the survey and for the submission of housing proposals was 1st August, 1936.

The present Report summarises for the whole country and for the various classes of authority shewn by the Index the results of the individual surveys.

2. Part II of Memorandum B on the Act previously referred to sets out in detail the method of conducting the survey which, after consultation with the associations of local authorities, the Minister recommended all authorities to adopt. The Minister did not formally prescribe the recommended method and forms, but he pointed out that returns on a uniform basis were necessary to enable him to obtain a complete picture of the housing conditions in the country as a whole and, in fact, the recommended forms were used in practically every instance.

The Overcrowding Standard

3. The standard consists of two parts ; one part dealing with sex separation, the other part being a standard of capacity. Section 2 (1) (a) provides that a dwellinghouse is to be deemed overcrowded if the number of persons sleeping in the house is such that any two of those persons, being persons ten years old or more of opposite sexes and not being persons living together as husband and wife, must

sleep in the same room. This part of the standard can only apply in the case of a house consisting of one room, because in the case of a house of two rooms or more it is always possible to separate the sexes at night.

Section 2 (1) (b) is the standard of capacity and in conjunction with two tables in the First Schedule to the Act, fixes in relation to the accommodation in any particular house the "permitted number" for that house, i.e., the maximum number of persons, irrespective of sex, who may be permitted to sleep in that house at one time. For this purpose children between the ages of 1 and 10 years count as half a person, and a child under one year of age does not count at all. In this Report the "number of units" in a family or the number of "equivalent persons" means the number obtained by counting each person over ten years of age as one unit, and each child between the ages of 1 and 10 years as half a unit.

The two tables in the First Schedule are appended.

In applying Table II, each room of the size mentioned is to be reckoned as capable of accommodating the number set out in the Table, and the aggregate for all the rooms in the house is ascertained in this manner. The "permitted number" for the house is the aggregate number so obtained or the number given by Table I, whichever is the smaller.

Table I

Where a house consists of—	The permitted number of persons is—
(a) One room	2
(b) Two rooms	3
(c) Three rooms	5
(d) Four rooms	7½
(e) Five rooms or more	10 with an additional 2 in respect of each room in excess of five.

(In using this Table, a room of less than 50 square feet is not counted as a room.)

Table II

Where a room in a house has a floor area of —	
(a) 110 square feet or more	2
(a) 90 square feet or more but less than 110	1½
(c) 70 square feet or more but less than 90	1
(d) 50 square feet or more but less than 70	½
(e) Under 50 square feet	Nil

It will be seen that if all the rooms in a house to which the Tables are to be applied are of 110 square feet or more in area, Table I only will have to be used. Table II is to be applied only when one or more of these rooms is between 50 and 110 square feet in size. In such a case, the total number of persons which would be allowed under Table II according to the size of the rooms in the house is calculated. The number so reached will be the permitted number if it is less than the number given by Table I.

In considering the application of the standard in relation to particular families it is to be noted—

- (i) that in the case of a house part of which is sub-let, the rooms occupied by the sub-tenant constitute a separate house; (Section 12, definition of "dwellinghouse");
- (ii) that only rooms normally used in the locality for sleeping or living purposes are counted as rooms, so that bathrooms, sculleries, etc., are not counted as part of the accommodation (Section 12, definition of "room").

Method of Survey

4. The method recommended to local authorities contemplated a survey in two stages. The first stage was a preliminary house-to-house survey of all working-class houses in the area directed to ascertain as respects each such house (a) whether it was empty; and (b) if it was occupied—(i) the number of families and persons in each family; and (ii) the number of rooms occupied by each family. The application of Table I in the First Schedule to the facts so disclosed indicates at once that a certain number of families are definitely overcrowded whatever the size of the rooms occupied may be. This preliminary survey would not, however, disclose those families which, though not overcrowded when regard was had solely

to the number of rooms in accordance with Table I, would nevertheless be found to infringe the standard when Table II, which takes account of the size of rooms, was applied. A family not overcrowded according to Table I, but overcrowded when Table II is applied, must be very near the overcrowding level on Table I. It was accordingly possible on the first survey to pick out all the cases which were likely to fall within the latter category and to arrange for a further inspection and measurement of the rooms in the houses concerned.

The second part of the survey accordingly consisted in a more detailed inspection involving the measurement of the floor area of all the rooms in the houses in which a possible case of overcrowding had been disclosed by the preliminary survey. In order to select such doubtful cases from the results of the preliminary survey local authorities were recommended to ascribe to each dwellinghouse a permitted number one fifth less than that which would be obtained by Table I. In other words, local authorities were recommended to measure the rooms in houses which the preliminary survey shewed were not overcrowded according to Table I but would be overcrowded if the permitted number according to Table I had been 20 per cent. less. Two forms were recommended on which the results of the individual inspections should be recorded. Form A dealt with the preliminary enumeration and Form B with the measured houses. These forms, together with the instructions for filling them up, are reproduced in Appendix I of this Report.

The rules for the measurement of floor areas were prescribed by the Minister under Section 6(4) of the Act ("The Housing Acts (Overcrowding and Miscellaneous Forms) Provisional Regulations, 1935"). The rules are to the effect that the floor area is not to take account of internal projections such as chimney-breasts, and that in the case of rooms with sloping ceilings any part of the floor where the height is less than 5 feet is to be excluded.

When the local authority had completed the two parts of the survey the results were incorporated in a summary form. This form—Form C of Memorandum B on the Housing Act, 1935—is the same as that used in the various summary tables in this Report. Local Authorities were asked to submit in every case a form covering the whole area of the authority, together with other forms covering only the houses in the area belonging (a) to that authority; and (b) to other local authorities. They were also asked to submit to the Minister copies of any subsidiary forms, e.g., relating to parishes or wards which they had prepared for their own use.

The Conduct of the Survey

5. In most areas the survey was carried out under the general directions of the Medical Officer of Health assisted by the Sanitary Inspectors. In order to complete the task by the date fixed by the Minister it was usually necessary to engage temporary assistants to undertake the preliminary enumeration on Forms A. The measurement of rooms, where necessary, was normally carried out by or under the direct supervision of the Sanitary Inspectors, but in some cases selected temporary assistants did the work. Some local authorities, realising that in the long run it would probably be necessary, in order to be able to comply with requests from landlords who wished to ascertain the "permitted number" for their houses, to measure the bulk of the working-class houses in their area, omitted the preliminary enumeration and proceeded direct to systematic measurement of all working-class houses. In one or two areas, individual councillors carried out the preliminary enumeration; in a small number of areas the local authority obtained the particulars for the Forms A by posting or distributing notices requesting the occupiers of houses to give the required information on a form provided for the purpose. In whatever way the work was done it called for a considerable amount of organisation on the part of local authorities and their officers, and its success depended on the willing co-operation of the public. That this co-operation was accorded is evidenced by the fact that although the survey covered nearly nine million dwellings, many thousands of which were entered and measured, only one or two isolated complaints from the public were received by the Minister.

The overcrowding provisions apply only to working-class dwellings, i.e., according to the definition in Section 12, "any premises used as a separate dwelling by members of the working classes or of a type suitable for such use". Local authorities accordingly had to decide, in the light of this definition, which houses in their area should be inspected. Many chose a rateable value criterion, excluding

all houses with a rateable value over £26, £20, or some other figure which they regarded as appropriate to their area. Others had no definite criterion but excluded houses in particular areas occupied by persons not of the working class. Some authorities adopted the course of including every house in their area, so that some of the returns received relate to houses with a permitted number up to 60. As already mentioned, some authorities measured the rooms in every working-class house in their area, but this was not usual. Usually the preliminary survey disclosed more cases of possible overcrowding in which measurement was necessary than of definite overcrowding, owing to the fact that the criterion suggested for selecting these possible cases was wide enough to ensure that no case of actual overcrowding could be missed. As a result most local authorities measured a substantial number of houses, the greater part of which on measurement were found to be not overcrowded. Table I gives a few examples showing the proportion of houses measured to the total number of houses ultimately found to be overcrowded. Complete statistical information of the number of houses measured during the survey was not asked for by the Minister, but on the information available the total number for England and Wales may be estimated at about half-a-million.

In Memorandum B it had been suggested that, on the average, one enumerator might be expected to visit and complete Forms A for about 300 houses in one week, and the experience of local authorities shows that this estimate was not far wrong. Local authorities were not asked to inform the Minister of the additional cost entailed in making the survey, so that it is not possible to say precisely what that cost was for the country as a whole. The costs incurred by a considerable number of local authorities are however known, and some of these are given in Table I.

Table I
Examples of cost and relative number of houses measured

Area.	Approx. Cost.	No. of Dwellings.			Cost per 1,000 Dwellings Inspected.
		Inspected.	Measured.	Overcrowded.	
County of London	£ 25,000	1,015,000	132,000	71,000	£ 25
Manchester C.B.	9,000	190,361	over 6,000	3,920	47
Dewsbury C.B.	310	14,480	3,267	1,154	21
York C.B.	465	19,592	not known	477	24
Walthamstow B.	622	36,738	2,354	583	17
Beccles B.	55	1,662	38	35	33
Swinton and Pendlebury B. ..	200	11,509	700	295	17
Gravesend B.	152	5,950	333	105	26
March U.D.	21	1,297	100	23	16
Portslade U.D.	90	2,727	2,727	41	33
Hemel Hempstead R.D.	100	1,934	1,934	20	50
Luton R.D.	226	3,711	3,711	93	61
Watford R.D.	83	1,690	1,568	19	49

Using these figures as a guide, it may be said as a rough estimate that the total cost of making the survey for the whole country was about £250,000.

The statistical returns were requested to be sent in by 1st June, 1936, and the bulk of them were received during May, but a few were received very early. The first to be received was from Leominster Borough on the 28th November, 1935 and the second was from Smethwick County Borough on the 11th December, 1935. The return for the local authorities in London was made by the L.C.C. during March.

The rate at which returns came in is shown by the following table:—

By the end of	Total returns received.
March	183
April	363
May	1,024
June	1,450

At the time this Report was written, complete returns from 64 authorities were still outstanding. (Vide paragraph 7.)

The Value of the Survey

6. The primary object of the survey was to ascertain in each area every case of overcrowding which existed at the time of the survey, together with sufficient details relating to each case to enable the local authority to formulate proper plans for dealing with the problem. This object was achieved when a Form B had been filled up for each house which contained an overcrowded dwelling, and such supplementary information as might be necessary in a particular case had been entered on the back of that form. In fact each Form B represents a kind of case-paper for each case of overcrowding, and many local authorities are using a Form B printed on a stiff card the back of which is skilfully designed to give a complete subsequent history of the action taken.

The secondary object of the survey was to give a local authority (and the Minister) a substantially accurate position of the amount of working-class accommodation in their area and the number and size of the working-class families occupying that accommodation. This object was achieved by the method of general survey recommended and by the compilation of the results of the survey in Form C. As already mentioned, Form C is the same form as is used in Appendices C1 to C5 of this Report. Each column of the Form shows the number and size of families occupying dwellings of the accommodation shown at the head of the column, and each row of the form shows the number and accommodation of dwellings occupied by families of the size shown at the beginning of the row. The stepped diagonal divides the overcrowded families from the remainder; entries on the form below and to the left of the stepped diagonal represent overcrowded families and houses; those to the right and above represent uncrowded families and houses. Entries on the step represent families just not overcrowded, i.e., families which would be overcrowded by the addition of a child over one year of age, or in course of time by an existing child under ten years of age passing that age.

From the point of view of the local authority the information classified on Form C affords a valuable guide as to the kind of accommodation of which there is a surplus or a deficit in their area having regard to the needs as disclosed by the distribution of families. This information will accordingly affect all the future housing operations of the authority whether they are building to replace slum houses demolished, to abate overcrowding or for ordinary housing needs. For example, in an area where Form C disclosed a surplus of houses with two bedrooms, no further houses of that type would be built, and if it became necessary (during slum clearance operations, for example) to rehouse a family which required a house with two bedrooms, one of the existing overcrowded houses of that type would be used and the opportunity would be taken of moving the overcrowded family into a newly erected house of a size suitable to that family.

From the point of view of the Minister the information classified on Forms C for all the areas in the country is valuable not only when dealing with housing proposals from individual authorities, but also as a guide in framing housing policy. It affords a general picture of the housing conditions in any selected part of the country and enables reasonably accurate estimates to be made of housing needs and of what would be the effect in particular areas and in the country as a whole, of any given variation of the present overcrowding standard.

The value of the survey for these purposes is not substantially affected by the fact that the statistics obtained have, for various reasons, no claim to be regarded as exact and uniform in the sense, for example, of the Census returns. The fact must, however, be borne in mind, especially when using the statistics to make comparisons between areas. Some of the reasons which make it necessary to exercise caution when using the statistical results of the survey for comparative purposes are as follows:—

- (i) The range of houses covered by the survey varied in different areas according to the criterion adopted by the authority to ensure that all working-class houses were inspected. For example, where every house in an area was included the resulting percentage of overcrowding relates to the whole population and is consequently less than the real percentage of overcrowding amongst the working-class population. Some returns do not include particulars relating to houses included or about to be included in slum clearance orders.

- (ii) The definition of " room " in Section 12 takes account of the custom of the locality. In those areas where it is customary to use a large kitchen for living purposes, that kitchen would be counted as a room ; in those areas where it is customary to have a small kitchen not usually used for living purposes, that kitchen would not be counted as a room. It is probable that even in areas where customs and conditions are comparable, the decisions of the local authorities as to what constitutes a " room " are not completely uniform.
- (iii) Local authorities will have varied in the way they have tabulated the less usual forms of occupation. For example, one house may be occupied by two unrelated families who have separate bedrooms but share equally all the other accommodation. Some authorities will have classified this as two families, dividing the accommodation between each according to circumstances ; other authorities will have treated this as one family with lodgers.
- (iv) The surveys vary in quality. Some are as exact as possible, every room in every working-class house having been measured ; others have the entries relating to unmeasured houses properly adjusted on a basis suggested by the experience of the houses which have been measured ; the majority have entered the unmeasured houses as if the actual " permitted number " were the " reduced permitted number " used in selecting cases of possible overcrowding (vide paragraph 4 of this Report). In a very few cases the results of the preliminary survey (without measurement) only have been received in time for inclusion in this Report. These variations in practice do not affect the houses found to be overcrowded, for these were mostly measured, but they affect, to a small extent, the general picture of the housing position in a particular district, and in the country as a whole.

THE RESULTS OF THE SURVEY

7. There are 1,536 housing authorities in England and Wales from whom returns should have been received. At the time this report was written 1,472 authorities had submitted returns in a form which enabled them to be included in the summary tables for the whole country, but between that time and the date of going to press some further returns were received and the particulars have been included in Appendix F in relation to the authority concerned. A small proportion of the returns received in time could not be included in the summary tables because the amount of information provided was for some reason or other insufficient—e.g. in some instances only particulars about overcrowded houses were given with no particulars about the remainder of the working class accommodation in the district. In all cases such particulars as have been received are included in Appendix F which also incorporates any amendments necessitated by the late receipt of amended returns. The Summary Tables (Forms C1 to C5 and CC1 to CC5) accordingly relate to 1,472 authorities out of the total of 1,536, or 96 per cent. of authorities. The authorities not included however are for the most part small, and in terms of population the Summary Tables cover nearly 99 per cent. of the whole country. Consequently the incompleteness of the Tables does not invalidate the general conclusions to be drawn from them, nor alter the general picture of the housing situation which they disclose. The authorities whose returns could not be included in the Summary Tables are given in the following list :—

Municipal Boroughs.—Appleby, Bewdley, Chard, Helston, Llanidloes and Tenby.

Urban Districts.—Alfreton, Barmouth, Brynmawr, Chatteris, Clayton West, Denby and Cumberworth, East Dereham, Emley, Flockton, Gunthwaite and Ingbirchworth, Hipperholme, Hornsea, Kirkburton, Kirkby-in-Ashfield, Kirkham, Llanwrtyd Wells, Long Eaton, Maltby, Market Rasen, Marple, Marsden, Menai Bridge, Penrith, Redditch, Risca, South Crosland, Swanage, Towyn, Whaley Bridge and Whittlesey.

Rural Districts.—Alston and Garrigill, Ashby-de-la-Zouch, Auckland, Bridgnorth, Bridport, Brixworth, Broadwoodwidge, Crickhowell, Dolgelly, Dursley, Edeyrnion, Evesham, Hemsworth, Holderness, Holsworthy, Kerrier, Limehurst, Lleyn, Machynlleth, Maidstone, Market Harborough, Millom, Overton, Penllyn, Romney Marsh, St. Austell, Swaffham and Walsingham.

In total, these areas contain about 150,000 families of which on the basis of the rest of the return, about 4,000 would be overcrowded.

I.—The Extent of Overcrowding in England and Wales

8. It was explained in paragraph 3 of this Report that the overcrowding standard consists of two parts, one part of which applies only to a house consisting of one room. Where the number of persons in one room exceeded the permitted number, i.e., if in the case of a room of 110 sq. feet or more in area the number exceeded 2, the dwellinghouse would be overcrowded on numbers and the question whether or not it was also overcrowded on the sex separation part of the standard became irrelevant and was not therefore recorded. In certain cases, however, dwellinghouses consisting of only one room were overcrowded, not in numbers but solely because of the sex separation part of the standard, cases for example, of brother and sister, father and daughter, etc., living in one room. The total number of such cases throughout the whole country was very small. In the whole of London the number was only 287 out of a total number of over 70,000 families overcrowded. In Manchester the number was 37 out of a total of nearly 4,000 families overcrowded. A few further examples are—Liverpool, 23 out of 11,500, Leeds, 2 out of 2,300, and Plymouth, 14 out of 2,750.

From the returns received at the date of this Report, the total number of families of 2 persons living in one room returned as being overcrowded solely on account of the sex separation part of the standard was under 500. These cases, which form such an insignificant proportion of the total cases of overcrowding, are not dealt with in the various tables which appear in the Appendix to this Report. Those tables are confined to the cases of overcrowding due to there being a larger family in the dwelling than is permitted by the overcrowding standard.

From the Forms C for individual areas, the aggregate Table C1 in the Appendix covering England and Wales was compiled. Apart from the small omission just referred to, this Table contains in itself all the information about housing conditions in relation to the country considered as one unit which was ascertained from the survey. It discloses at once that—

8,924,523 dwellings were inspected ; and that
341,554 dwellings were found to be overcrowded,

so that, throughout England and Wales, at the time of the survey, **3·8** per cent. of families were living in overcrowded conditions.

The Table gives a wealth of information about the working-class accommodation in England and Wales. It shows the number of families of any given size and the number of such families occupying dwellings of any specified capacity. Similarly, it shows the number of such dwellings of any given size, and the number occupied by families of a specified size. The entries below and to the left of the stepped diagonal show the numbers and distribution of the overcrowded families, while those above and to the right of that diagonal relate to the uncrowded families. The entries on the stepped diagonal itself show the families whose accommodation is exactly the minimum permitted by the overcrowding standard. The further from the diagonal an entry appears the greater is the departure from the standard, so that the worst cases of overcrowding can be picked out at once. Thus, for example, the table shows at once that the survey disclosed 33 families of 10 units each living in accommodation only capable of taking 3 units on the overcrowding standard.

A general picture of the extent of accommodation occupied by families of the working class in general, and by overcrowded families in particular, is perhaps more readily obtained from the following Tables II to VI which have been prepared from Table C1, than from Table C1 itself.

(In compiling some of these tables, entries in Table C1 referring to families of "12 units or over" and to dwellings with permitted number of "12 or over" have been computed as if they related to families or dwellings of exactly 12 units, but this does not seriously affect the result).

Table II

Average units of accommodation per family of given size

Size of family (equivalent number of persons).	Average number of units of accommodation (permitted number) occupied by families of the size in Col. 1.	
	All families.	Overcrowded families.
1.	2.	3.
1	4.4	0.4
1½	4.8	0.9
2	6.1	1.3
2½	6.7	1.8
3	6.7	2.1
3½	6.6	2.8
4	7.4	2.8
4½	7.4	3.0
5	7.7	3.6
5½	7.5	4.3
6	7.6	4.6
6½	7.7	5.0
7	8.5	5.3
7½	8.0	5.8
8	8.4	6.3
8½	8.3	6.5
9	9.0	6.8

10	8.9	7.6
10½	8.7	7.8
11	9.9	7.9
11½	9.3	8.3
12 and over	11.0	8.8

In Table II, which gives the average number of units of accommodation occupied by the various sizes of families, a family would be just not overcrowded if the number of units in the size of the family were the same as the number of units of accommodation, and consequently the excess of the numbers in column 2 over those in column 1 indicates the extent to which the average family enjoys accommodation in excess of that required by the overcrowding standard. Similarly the excess of the numbers in column 1 over those in column 3 indicates the extent to which the accommodation occupied by the average overcrowded family falls short of that required by the standard. The general picture given by this table is that the average working-class family is housed well above the statutory minimum standard, especially the families of average size. As the family gets larger, the less is the relative margin of accommodation above the standard. In the case of the large families of 8 or 9 units and more there is no margin at all. In other words, although some families of this size are not actually overcrowded, the accommodation at the disposal of the class is so limited that in total it is insufficient. If families of this size were spread evenly amongst the accommodation at present occupied by them, they would all be overcrowded.

Tables III and IV classify families according to the proportion which the accommodation they actually have bears to the minimum accommodation which they should have according to the overcrowding standard. Thus families with accommodation just equal to the minimum permissible by the standard, i.e., families just not overcrowded, are entered as having 100 per cent. of the minimum accommodation; families with less than 100 per cent. minimum accommodation are overcrowded, and the degree of overcrowding is greater the smaller the percentage. Similarly, families with over 100 per cent. minimum accommodation are not overcrowded, and the greater the percentage the greater the excess of accommodation over the minimum required by the overcrowding standard.

Under 40 but not under 30.. .. .	4,600	1·3
Under 30	1,300	·4

These tables disclose some interesting facts. Taking Table III relating to uncrowded families, it will be seen that a variation of the overcrowding standard which reduced the permitted number for a dwelling by 10 per cent (it is not suggested that a variation of this precise form is practicable) would increase the number of families who would be overcrowded by about 380,000. In other words, 4·4 per cent. of the present uncrowded families are very near the borderline of overcrowding. On the other hand, Table III also shows that 4,185,000 families have more than double the amount of accommodation required by the overcrowding standard which means that these families, constituting over 46 per cent. of all the working-class families in the country are so well housed that the number of persons in each family could be doubled and yet overcrowding would not ensue. Table IV brings to light the intensity of overcrowding; it shows, for example, that over 43 per cent. of overcrowded families have at least 80 per cent. of the minimum accommodation required by the overcrowding standard and that only 4·8 per cent. have less than half the minimum accommodation required by the overcrowding standard. It also shows that a variation of the standard which increased the permitted number of a dwellinghouse by 10 per cent. would reduce the number of overcrowded families by 52,000. Taking the Tables together it appears that about 433,000 working-class families, or 4·8 per cent. of the whole are housed within a margin of 10 per cent. above or below the statutory standard.

The comparison between the position of the uncrowded and overcrowded families can be effected in another way. From Table C1 it is easy to calculate the average number of units in an uncrowded or an overcrowded family, and also the average "permitted number" per dwelling occupied by these classes. Such calculations give the following results—

(a) *All families*—

Average number of units per family	3·20
Average permitted number per occupied dwelling	6·66

(b) *Uncrowded families*—

Average number of units per family	3·11
Average permitted number per uncrowded dwelling	6·76

(c) *Overcrowded families*—

Average number of units per family	5.60
Average permitted number per overcrowded dwelling ..	4.17

The average overcrowded family is, therefore, 74 per cent. larger than the average family, and occupies accommodation on the average 37 per cent. less.

In Tables V and VI the incidence of overcrowding is analysed in another way. Table V shows the number of overcrowded families of each size, and the corresponding percentage of the total number of families of the same size. It also gives the percentage distribution of overcrowding amongst overcrowded families of the various sizes. Table VI gives corresponding information for overcrowded dwellings.

Table V
Size Distribution of Overcrowded Families

Size of family (equivalent number of persons).	Overcrowded families of the size in Column 1.		Percentage proportion which the number in Column 2 bears to the number of all families of the size in Column 1.
	Number.	Percentage of total overcrowded families.	
1.	2.	3.	4.
1	867	0.2	0.1
1½	267	0.1	1.3
2	5,254	1.5	0.2
2½	13,072	3.8	1.7
3	14,613	4.3	0.8
3½	31,643	9.3	6.5
4	38,087	11.2	3.4

7	28,323	8.3	24.1
7½	16,010	4.7	33.7
8	19,517	5.7	41.7
8½	9,940	2.9	51.6
9	8,888	2.6	50.1
9½	4,425	1.3	63.4
10	3,541	1.1	59.8
10½	1,707	0.5	70.7
11	1,134	0.3	60.4
11½	497	0.1	67.4
12	378	0.1	48.7
12½ and over	323	0.1	40.4
Total	341,554	100	

Table V shows that overcrowding in small families up to 4 units in size accounted for 30.4 per cent. of all overcrowded families while overcrowding in large families of 7 units or over accounted for 27.7 per cent. of all overcrowded families.

The final column in the Table shows the proportion which the number of overcrowded families of a particular size bears to the total number of families of that size, and the entries bring out clearly what a high proportion of large families is overcrowded. The Table illustrates the fact that overcrowding may occur amongst families of normal size in certain areas because for some reason such as poverty, or acute shortage of accommodation, those families cannot obtain an ordinary working class dwelling; while in the case of abnormally large families overcrowding is likely to occur in any area because the average working class dwelling which is generally all they can afford is not large enough for them.

Table VI

Over 12		20	.01			

Table VI shows that 43.3 per cent. of the overcrowded dwellings were of either one or two rooms, while only 2.7 per cent. of the overcrowded dwellings had five rooms or more. Overcrowding is much more common in dwellings of two and three rooms than in dwellings of any other size.

EFFECT OF A HYPOTHETICAL ALTERATION OF THE OVERCROWDING STANDARD

9. The overcrowding standard is the first attempt of its kind to lay down a statutory arithmetical basis on which to measure overcrowding. In paragraph 3 of Memorandum B on the Housing Act, 1935, the following sentence appears: "It is relevant to point out that this standard does not represent any ideal standard of housing, but the minimum which is in the view of Parliament tolerable, while at the same time capable of immediate or early enforcement".

The ideal standard of housing may perhaps be taken as the standard outlined in Section 37 of the Housing Act, 1930. This is the standard which is applied in certain circumstances to the rehousing activities of local authorities. It is not a detailed standard, but provides only that a new house containing 2 bedrooms shall count as providing accommodation for 4 individuals, one containing 3 bedrooms for 5 individuals, and one containing 4 bedrooms for 7 individuals. The size of the bedrooms is left unspecified, but since in new houses one of the bedrooms at least is usually small, the standard may be taken to be equivalent to 2 individuals per normal sized bedroom, together with adequate living accommodation.

As mentioned in paragraph 6 of this Report, the results of the overcrowding survey can be used to estimate the effect of any alteration in the overcrowding standard, and to show the interesting results which may be obtained one experiment of this kind is made in the present Report. In Table VIII is shown what the overcrowding position would have been on the basis of the hypothetical standard set out in Table VII.

This hypothetical standard has been selected as an example of a standard which lies between the present statutory standard and that in Section 37 of the Housing Act, 1930; it is a standard which would mean that if a dwelling were not overcrowded it would normally provide sufficient accommodation for the family without the necessity of using the living accommodation for sleeping purposes.

It will be seen that on this hypothetical standard the number of overcrowded families would have been 853,000 instead of 341,000, the number actually overcrowded on the present standard. The greatest individual increase would have been in respect of families of 5 units.

The number of families overcrowded on the present standard is sufficiently high to mean that in many areas the local authorities, especially those still heavily engaged with their slum clearance programmes, will be fully occupied during the next few years in providing the houses required to abate overcrowding. On the other hand, except in very exceptional areas, the completion of the task within such a period is quite practicable.

On the whole, therefore, it appears that the present standard was fixed at about the right level to achieve its object. Once the present standard has been generally reached throughout the country, if Parliament decided that the standard should be raised to a level comparable with that of the hypothetical standard here used for purposes of example, it would not be unreasonable to assume that the task of achieving that new standard could be completed within a comparatively short number of years.

II.—The Geographical Distribution of Overcrowding in England and Wales.

10. From the overcrowding returns have been compiled the summary tables C2 to C5 of the Appendix, which show the overcrowding position separately for London, the aggregate of the County Boroughs, the aggregate of the other urban areas (non-county boroughs and urban districts) and the aggregate of the rural districts. In the tables D, E and F of the Appendix the position for each housing authority is shown separately. Table D deals with the metropolitan boroughs and the City of London, Table E with the county boroughs, and Table F with the administrative counties. In each of these tables the information given for each authority, besides showing the number of dwellings inspected and the number and percentage found to be overcrowded, with similar particulars separately for the houses owned by each housing authority, gives the number of families of each size found to be overcrowded, and the number of dwellings of each size found to be overcrowded, together with the number of families housed exactly at the minimum standard. From this classified information the maps in Appendix B have been prepared to show pictorially, in certain selected areas, the regional distribution of overcrowding. Where the returns from an area included in a map had not been received, the area has been left blank and un-numbered in the map.

In order to give a more readily comprehensible picture of the way overcrowding varies in different parts of the country and in different classes of area, Tables IX to XIII have been prepared from the material in the Appendix. Table X was prepared at an earlier stage than the others and therefore does not include a few of the latest returns. In drawing deductions from these Tables it is necessary to bear in mind the caution already given to the effect that while the actual number of overcrowded families recorded in any area may be taken as reasonably accurate, the calculated percentage of overcrowded houses for that area may be misleading in cases where either not all the working-class houses in the area were included in the survey, or more than working-class houses were included. The first cause of error is probably the commoner, and it also has the greater effect in producing misleading percentages; it appears however to be confined almost entirely to small districts. Comparisons between aggregations of local authorities—*e.g.*, counties—will therefore give more reliable results than comparisons between individual

authorities. In the case of some of the smaller Counties, however, such as Anglesey and Carnarvon, it appears probable from studying the proportion of houses included in the survey that the percentages of overcrowding are swollen by the limited scope of the survey.

The worst overcrowding is shown to be for the most part concentrated in two areas, the East End of London and the North East Coast. The administrative county of London and the geographical counties of Durham and Northumberland together contain over 130,000 overcrowded families, or about 40 per cent. of all the overcrowded families in the country, while the percentage of total population in these areas is only 16.

Of the large cities, towns or metropolitan boroughs, Sunderland is the worst, with 8,649 overcrowded families representing an overcrowding percentage of more than 20. There are practically as many overcrowded families in Sunderland alone as there are in the counties of Kent, Surrey and Sussex taken together. Shoreditch and Stepney were the most overcrowded of the Metropolitan Boroughs.

The country south of a line from the Severn to the Wash, but excluding London, has a total of just over 51,000 overcrowded families which is about 8,000 less than the number of overcrowded families in Northumberland and Durham alone.

The average overcrowding percentages for the different classes of local authority (*vide* Tables C2 to C5) were:—

In the Metropolitan Boroughs (and City of London) ..	7.0
In the County Boroughs	4.2
In non-county Boroughs and Urban Districts	3.0
In Rural Districts	2.9

The position in each class is analysed in more detail in Table XIII, where the number of authorities of each class with a particular percentage is shown. This table shows that except in the case of the authorities in London, the general picture in each class of authority is the same. A large proportion of authorities have percentages of overcrowding under the average for their class, the average in each class being raised by a comparatively few cases of very high percentages, due largely to places in Northumberland or Durham. Thus—

53, or 64 per cent. of County Boroughs have percentages not exceeding 4.	} have percentages not exceeding 3.
576, or 64 per cent. of non-county boroughs or urban districts	
266, or 58 per cent. of rural districts have percentages not exceeding 2½.

* The survey in Leeds did not include 25,650 dwellings being dealt with in the slum clearance programme. The local authority estimate that if these dwellings had been included the percentage of overcrowding would have been 5.5.

Table X

III.—Overcrowding in houses owned by housing authorities

11. The information given on this head is contained in Tables CC1 to CC5 in the Appendix, which show the distribution of families and working-class dwellings in houses belonging to housing authorities in England and Wales as a whole, in London, in the aggregate of the county boroughs, the aggregate of the urban areas, and the aggregate of the rural districts; and in Tables D, E and F which give the number of such houses and the number and percentage overcrowded for each housing authority in the country from whom returns have been received. The fact emerges from these tables that in the case of most authorities the degree of overcrowding in their own houses is greater than in privately-owned houses. Prima facie, this is a very unsatisfactory situation, but the reason for it is not far to seek. Local authorities, in their provision of new houses, have for the most part erected houses of a type suitable in size for the average working-class family, and the proportion of large houses erected has been comparatively small. In practice, however, they have carried out their duty to deal with the worst housing conditions, and to give preference to large families unsuitably housed. Particularly they have taken as tenants the families with young children, that is families growing in age and numbers who in course of time outgrow the accommodation available. The survey has disclosed many cases of overcrowding in local authorities' houses, but even the overcrowded families concerned are much better housed now than they were before.

Table CC1 shows that in the aggregate, the survey covered 873,033 dwellings owned by housing authorities, of which 44,888 dwellings or 5.1 per cent. were overcrowded. In the case of privately-owned dwellings, 3.7 per cent. were overcrowded. From Tables CC2 to CC5 similar information can be derived for particular classes of area, and this is summarised in Table XIV.

Table XIV

Comparison between overcrowding in privately-owned houses and in houses owned by housing authorities

Area.	Percentage of overcrowded families in	
	Privately-owned houses.	Houses owned by housing authorities.
London (including the City)	6·8	10·5
County Boroughs in the aggregate	4·0	5·4
Non-County Boroughs and Urban Districts in the aggregate	2·8	4·5
Rural Districts in the aggregate	2·8	3·7
England and Wales	3·7	5·1

In London, where the municipally-owned houses may belong either to the Metropolitan Borough or the London County Council, the highest percentages of overcrowding were in Poplar (2,023 houses, 28·9 per cent. overcrowded), Stepney (1,717 houses, 23·6 per cent. overcrowded) and Bermondsey (2,688 houses, 20 per cent. overcrowded).

In Table XV are given the areas outside London with the highest percentages of overcrowding in houses owned by local authorities.

Table XV

Blaydon U.D.	194	15·0	Easington	291	10·7

The tables in the Appendix relating to houses belonging to housing authorities serve to show not only the overcrowded families but also the way in which those authorities are disposing of all the accommodation which they own. Table CC1, for example, brings out some striking facts. There is a type of house erected by authorities in large numbers throughout the country, namely, the house with kitchen, living room and three bedrooms with a total superficial area of about 760 square feet. According to Section 37 of the Housing Act, 1930, such a house provides adequate accommodation for a working-class family of 5 individuals. The permitted number for such a house on the overcrowding standard would vary from $5\frac{1}{2}$ to 7 according to the sizes of the bedrooms. Table CC1 shows that at the time of the survey 2,515 of such houses were occupied by only one person, 337 by only $1\frac{1}{2}$ (one adult and one child) and 34,400 by only 2 persons. A similar position is shown in the case of larger houses, with permitted number from $7\frac{1}{2}$ to $8\frac{1}{2}$, e.g., the three-bedroomed house with a parlour as well as a living room, or a house with one living room and four bedrooms, where the table discloses that 1,930 such houses were occupied by only one person, 256 by $1\frac{1}{2}$ persons and 29,103 by two persons.

The most common explanation of this state of affairs is that the houses in question have been in the same tenancy for a considerable number of years. When the houses were first let—perhaps 15 years ago—they were fully occupied, but in course of time normal incidents like marriage and death have reduced the number of occupants. The existence of these under-occupied houses simplifies the problem of abating overcrowding in municipally-owned houses. Even after proper allowance has been made for cases where undue hardship would be caused by a change of tenancy it is clear that by rearranging some of their tenants amongst the houses at their disposal, housing authorities will be able to get rid of a substantial proportion of the existing overcrowding in those houses.

In order to give a picture of the way in which the housing accommodation provided by local authorities is actually utilised, Table XVI has been drawn up. The table shows the average number of units in a family occupying accommodation of a given type, and gives the relation between this average number and the "permitted number" for that type.

Table XVI
Density of occupation in houses owned by housing authorities

" Permitted Number ".	Most usual type of accommodation corresponding to the permitted number in Col. 1.	Dwellings with the permitted number in Column 1.				
		Total Number.	Uncrowded.		Overcrowded.	
			No.	Average No. of units in family.	No.	Average No. of units in family.
1.	2.	3.	4.	5.	6.	7.
Up to 2 ..	Sub-tenancy	7,345	5,721	1·27	1,624	2·7
$2\frac{1}{2}$ } 3	Sub-tenancy or dwelling for aged couple.	30,310	26,968	1·96	3,342	4·1
$3\frac{1}{2}$ } 4						
$4\frac{1}{2}$ } 5	Two-bedroomed non-parlour house ..	66,813	63,642	2·72	3,171	5·88
$5\frac{1}{2}$ } 6						
$6\frac{1}{2}$ } 7	Three-bedroomed non-parlour house	365,729	338,645	3·77	27,084	7·49
$7\frac{1}{2}$ } 8						
$8\frac{1}{2}$ }	Three-bedroomed parlour house, or four-bedroomed non-parlour house.	260,310	257,126	3·89	3,184	9·1
9 or over	Houses of larger type with 4, 5 or more bedrooms.	74,681	74,115	4·1	566	10·29

The Table shows at once what a large proportion of municipally-owned dwellings are of the type which contains three bedrooms, either with or without a parlour in addition to a living room. The three-bedroomed type number 626,000 out of the total of 873,000 dwellings or about 72 per cent. of all municipally-owned dwellings. According to the scale provided in Section 37 of the Housing Act, 1930, the three-bedroomed type is normal accommodation for a family of 5 individuals. The Table shows that in practice in houses of this type the average number of units in uncrowded families was about 3·8 while in the two-bedroomed houses it was 3·3. The number of individuals in a family is only equal to the number of units in that family when all the individuals are over 10 years of age; where some of the individuals are under 10 years of age, since such individuals only count as half-units, or do not count at all if they are under one year of age, the number of individuals in a family is greater than the number of units in the family. It is not possible, therefore, to make an immediate comparison between the actual standard of occupation and the scale in Section 37 of the Housing Act, 1930. For the purposes of such a comparison, however, it would probably be sufficiently accurate to assume that 4 individuals corresponds to $3\frac{1}{2}$ units and 5 individuals to 4 units, and on that basis it appears that, on average, the uncrowded municipally-owned houses are occupied on a slightly more ideal standard than that in Section 37.

Table XVI illustrates another fact. In commenting on Table IV it was pointed out that, taken over all the families included in the survey, the average number of units per family was 3·2. The entries in columns 5 and 7 of Table XVI show that the average number of units in families housed by local authorities is appreciably larger—in other words, local authorities are providing accommodation for the larger families. The entries in column 7, giving the average number of units in overcrowded families, when compared with the permitted numbers in column 1, give an estimate of the intensity of overcrowding in municipally-owned houses. It is evidently, in the average case, not very severe. For example, in the case of overcrowded three-bedroomed non-parlour type houses, the average size of family was 7·5 units. The table shows that, on average, the overcrowding was due to an excess of from 1 to $1\frac{1}{2}$ units per family.

The position of the overcrowded families in municipally-owned houses is further analysed in Table XVII, which also gives data for a comparison between the position in those houses and the position in private houses.

Table XVII

Numbers and sizes of overcrowded Families living in houses owned by housing authorities

Number of units in family.	Overcrowded families of the size in Column 1.		Percentage of overcrowded families of the size in Column 1 who are living in privately-owned houses.
	Number.	Percentage of total overcrowded families in houses owned by housing authorities.	
1.	2.	3.	4.
1	53	0·1	0·3
$1\frac{1}{2}$	11	—	0·1
2	408	0·9	1·6
$2\frac{1}{2}$	638	1·5	4·2
3	495	1·1	4·8
$3\frac{1}{2}$	1,145	2·5	10·3
4	1,149	2·5	12·5
$4\frac{1}{2}$	671	1·5	5·4
5	983	2·2	9·1
$5\frac{1}{2}$	3,002	6·7	9·8
6	3,890	8·7	12·7
$6\frac{1}{2}$	6,046	13·6	6·2
7	8,209	18·4	6·8
$7\frac{1}{2}$	5,134	11·4	3·7
8	5,010	11·2	4·9
$8\frac{1}{2}$	2,757	6·1	2·4
9	2,308	5·1	2·2
$9\frac{1}{2}$	1,210	2·7	1·1
10	908	2·0	0·9
$10\frac{1}{2}$	421	0·9	0·4
11	240	0·5	0·3
$11\frac{1}{2}$	104	0·2	0·1
12	58	0·1	0·1
$12\frac{1}{2}$ and over	38	0·1	0·1
Totals	44,888	100	100

It has already been noted in paragraph 8 of this Report that 30·4 per cent. of the overcrowded families in the country consist of small families up to 4 units in size. Such families are almost always sub-tenants living in one or two rooms in a larger house. Table XVII shows clearly that the overcrowding in municipally-owned houses is for the most part due to the housing of large families in normal sized dwellings, and not to any appreciable extent to the practice of sub-letting. For example, in municipally-owned houses families consisting of 4 units or less account for only 8·6 per cent. of the overcrowded families, while in privately owned houses such families account for 33·8 per cent. of the overcrowded families. At the other end of the scale, families consisting of 7 or more units account for 58·7 per cent. of all the overcrowded families in municipally-owned houses, while in privately-owned houses such families only account for 23 per cent. of the total.

IV.—The Number of New Houses required to abate Overcrowding

12. The statistical returns received from local authorities which are summarised in this Report do not suffice to give any accurate figure as to the number of additional houses which would have been necessary at the time of the survey to relieve the cases of overcrowding. That figure can only be obtained by aggregating information supplied by each local authority after they have carefully considered the problem of their own area. Local authorities have been asked to forward to the Minister by the 1st August, 1936, their estimates of the number of new houses required, and the number and sizes of those which they would probably find it necessary to provide themselves. In making this estimate the authorities will have regard not only to the requirements of the families actually overcrowded at the time of the survey, but also to those families likely to become overcrowded, through children growing up, within the next two years. Their estimates will also take into account the fact that overcrowding can be abated in a variety of ways—e.g., in their own houses by a redistribution of families—and will have regard to accommodation rendered vacant by the removal of overcrowded families and to any vacant houses in their area in so far as they are in excess of the normal proportion necessary to ensure mobility.

Nevertheless, the statistical returns afford a guide as to the general magnitude of the problem. The total number of new houses necessary will obviously be substantially less than the actual number of families found to be overcrowded. For the whole country the number of new houses will, therefore, be substantially less than 340,000.

Reports of housing needs already received from some authorities suggest that the total estimate of new houses required is likely to be well under 50 per cent. of the total number of overcrowded families as found by the survey. Assuming, however, that it might be as much as 60 per cent., then the number of new houses required would be about 200,000. This figure is not put forward as any sort of reliable estimate, but solely to obtain an idea of the extent of the building problem involved in abating overcrowding.

During the six months ending March, 1936, local authorities erected 28,086 houses, mostly for rehousing persons displaced by slum clearance. They still have about 150,000 houses to build for this purpose, but even so, it will be seen that, in the aggregate, the problem presented by the abatement of overcrowding is well within their capacity. This is only true of the country generally. In particular areas, particularly in the East End of London, where overcrowding is rife, considerable time must necessarily elapse before the problem is solved.

In view of the various estimates of housing needs to abate overcrowding which have been given currency, it is perhaps worth while noting that even on the hypothetical standard postulated in paragraph 9 of this Report, the total number of houses required would (on the same basis as above) be some 500,000. With this figure should be compared the total number of houses with a rateable value of £13 or less (or £20 in the Metropolitan Police District) erected by private enterprise and local authorities together in the six months ending March, 1936, namely, 81,000.

MINISTRY OF HEALTH,
LONDON, S.W.1
JULY, 1936.

London Tables, giving for each metropolitan borough and the City of London, arranged alphabetically, the distribution of overcrowded families and overcrowded dwellings, with some particulars as to overcrowding in the dwellings in each metropolitan borough owned by local authorities	D
County Borough Tables, arranged alphabetically, showing for each county borough the distribution of overcrowded families and overcrowded dwellings with some particulars as to overcrowding in the dwellings in each county borough owned by local authorities	E
County Tables, arranged alphabetically under Counties in England and Counties in Wales, showing for each housing authority in the administrative county particulars similar to those in Tables D and E. In each county, the housing authorities are divided into urban and rural, and arranged alphabetically under their class	F

FORM A.

OVERCROWDING SURVEY.
PRELIMINARY ENUMERATION.

No. of
premises in
rate book

1 Address or situation of premises.....

2 Name of occupier.....

3 Description of property.....

To be filled in by enumerator.				To be filled in at the office.			
Names of tenants and sub-tenants. 4	Number of habitable rooms. 5	Number of persons normally sleeping therein. 6		Equivalent number of persons sleeping in the dwelling. 7 (a)	Permitted number. 7 (b) 7 (c)		Whether overcrowded. 7 (d)
		10 or over.	Under 10.		Actual.	Reduced.	
(1)							
(2)							
(3)							
(4)							
(5)							

Enumerator..... Date.....

FORM A.

Instructions to enumerators.

A separate form must be used for each structurally separate dwelling.

Entries 1 and 2.—May in some cases be filled in at the office in advance.

Entry 3.—Insert brief description of property, e.g., two-storied house, tenement house, etc.

Entry 4.—The name of each tenant and sub-tenant occupying a portion of the premises as a separate dwelling is to be entered here.

Entry 5.—Must only include rooms normally used as living rooms or bedrooms in the locality.

The age to be taken into account is the age on the birthday next *after* the date of the enumeration.

Note.—Particulars should be filled in as far as possible whether the house is occupied or not. When dealing with an empty house the enumerator should enter the word "none" under entry 4, and if it is not possible to obtain precise information as to the number of rooms he should enter his estimate under column 5 putting E after the number. Thus if he estimates that the house has 3 habitable rooms he should enter 3E in column 5.

Instructions to office.

Entries 1 and 2.—May be found in the rate book (if filled in at the office).

Entry 7(a).—This is calculated from entry 6. Persons over 10 count as 1. Persons under 10 count as $\frac{1}{2}$.

Entry 7(b).—This is the number calculated from 5 using column (b) in the table below.

Entry 7(c).—This is the number calculated from entry 5 using column (c) in the table below.

Entry 7(d).—If 7(a) is greater than 7(b) (i.e. definite overcrowding) put + + here.

If 7(a) is greater than or equal to 7(c) (i.e. possible overcrowding) but less than or equal to 7(b) put + here.

Table.*

Number of habitable rooms. (a)	Permitted number.	
	Actual. (b)	Reduced. (c)
1	2	1½
2	3	2½
3	5	4
4	7½	6
5	10	8
6	12	9½
7	14	11
8	16	13
9	18	14½
10	20	16
11	22	17½
12	24	19

* This table is based on the assumption that in the ordinary dwelling, some of the rooms will be below 110 square feet in area, and that consequently the permitted number ascertained solely from number of rooms without regard to their size would normally be in excess of the exact permitted number. The allowance for this factor in the table given is about one-fifth. The Medical Officer of Health may, however, find a different factor more appropriate for his district, in which case he will amend the third column of the table accordingly.

FORM B.

OVERCROWDING SURVEY

1.		2.			3.				4.								
Number in Rate Book..... Address.....		Name and address of owner or agent.....			Number of Families in the house.....				Name of responsible tenant of whole house (if any).....								
To be filled in by the Inspecting Officer :—Initials.....					Date.....		To be filled in at the office.										
5.	6.	7.			8.	9.			10.	11.	12.	13.	14.	15.	16.	17.	
Name of Tenant (or sub-tenant).	Land- lord's Sur- name.	Number of persons normally sleeping in premises.				Description and sizes of rooms.				Number of persons.					If over-crowded put +	Date for review.	
		Aged 10 or over.			Ages of persons under 10.		Description, e.g. kitchen, bed-room, living room.	Length. ft. ins.	Breadth ft. ins.	Floor area. sq.ft.	Allowed per room on Table II.	Total allowed on Table II.	Allowed on Table I.	Permitted.			Equiv- alent adults (Date).
		As Married Couples.	Other Males.	Other Females.	Males.	Females.											
(1)																	
(2)																	

Instructions for filling in Form B. (At the House)

A separate form must be used for each structurally separate dwelling.

The office will normally have filled up entries 1, 2, 3, 4, 5, but if any of these are left blank the inspecting officer should elicit the facts and fill them up at the inspection. The inspecting officer should append his initials and the date.

Entry 6.—The "landlord" means the immediate landlord of the occupier in column 5. Thus in the case of a sub-tenancy, the "landlord" will be the tenant letting out the sub-tenancy.

Entries 7 and 8.—These will include only the persons normally sleeping on the premises. For entry 8 the age of persons under 10 is to be entered in years and twelfths of a year (e.g. 5 years 9 months as $5\frac{9}{12}$, the age to be reckoned on the day of the month which corresponds with his birthday and follows next after the date of the inspection. Thus if a child was born on the 10th of January and the inspection is on the 20th of April, the age to be taken is the age on the 10th of May—i.e. so many years and 4 months; if he was born on the 25th of January the age to be taken would be that on the 25th of April.

Entry 9.—Normally the length and breadth will be entered—the area being computed and entered at the office—measurements being taken according to the instructions issued, but where rooms have a very awkward shape the inspecting officer should himself measure the floor area and complete entry 10.

Entries 11, 12, 13, 14, 15, 16 will be filled up at the office.

Instructions for filling in Form B. (At the Office)

This form is to be filled up as far as possible at the office but if there is any doubt as to facts (e.g., the responsible tenant) they should be left for the inspecting officer to elicit and fill in.

Entries 1, 2, 3, 4, 5 will normally be filled in at the office from Form A.

One Form is to be used for each house, the separate tenancies (1), (2), etc., being filled in from Form A. From the number of rooms given on Form A it will be possible to draw the line between the various tenancies. In practice it will probably be better to leave space for one or two rooms extra to avoid confusion if a mistake has been made on Form A.

Entries 6, 7, 8, 9 will be filled in by the inspecting officer, together with his initials and the date.

Entry 10 will normally be filled in at the office, but if it is not possible to measure length and breadth (e.g., if the room has a very awkward shape), the inspecting officer will have entered his estimate of the floor area.

Entries 11, 12, 13, 14, 15, 16 will be filled in at the office.

Entry 11 will be the number of persons allowed for each room according to Table II having regard to the description of the room (rooms not normally used in the locality as living rooms or bedrooms should not be counted).

Entry 12 will be the sum of entries 11.

Entry 13 will be the number allowed under Table I.

[N.B.—No room under 50 square feet or not normally used as a living room or a bedroom in the locality may be counted.]

Entry 14 is the lesser of entries 12 and 13.

Entry 15 is calculated from entries 7 and 8 and is the number of persons of 10 or over plus half the number of children of 1 year, or over, but under 10.

Children below 1 year will not be counted but in making entry 15, due regard should be paid to the difference in the date of making this entry and the date entered by the inspecting officer on his inspection.

For example, if 3 months have elapsed, all children entered as of age $9\frac{2}{12}$, $9\frac{5}{12}$, $9\frac{8}{12}$, will be counted as of age 10 or over, and each must count as a whole unit and not a half. Similarly, all children of age $\frac{1}{12}$, $\frac{4}{12}$, $\frac{7}{12}$ must be entered as children between 1 and 10 years.

Entry 16 will be made at the same time as entry 15. A + sign should be put :—

(a) If the number under 15 exceeds that under 14; or

(b) If there are insufficient rooms to allow of proper segregation of the sexes for persons of 10 or over.

Entry 17 should be filled in for those houses which if still occupied by the same family (which includes children under 10) are likely to become overcrowded within two years. The entry will be the month and the year, one month after which the house would be overcrowded. For example, if the survey is made in January, 1935, for a house having a permitted number of 3 persons and the occupants are a man, wife, one child entered as $\frac{2}{12}$ and another as $8\frac{7}{12}$, then in 7 months the number of "persons" will be 3, and in 1 year and 5 months it will be $3\frac{1}{2}$, i.e., the house will be overcrowded. The "date for review" will then be 1 year and 4 months after January, 1935, i.e., May, 1936, and the entry will be $\frac{5}{12}$.

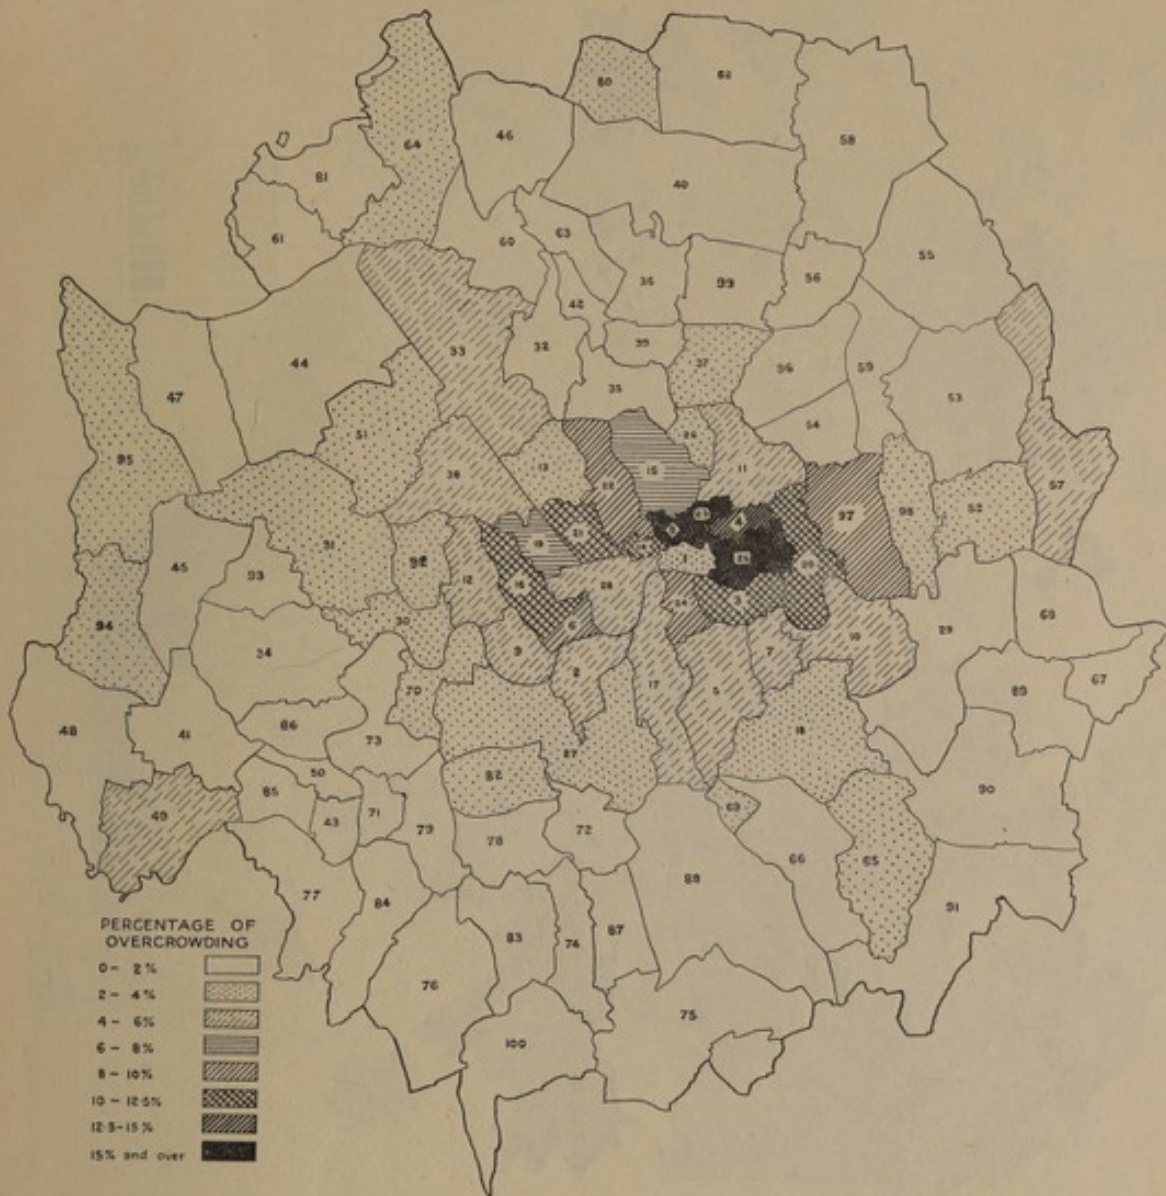

Table I.		Table II.	
No. of rooms.	Permitted No. of persons.	Size of rooms.	Permitted No. of persons.
1	2	110 sq. ft. or over	2
2	3	90 sq. ft. or over, but under 110 sq. ft.	$1\frac{1}{2}$
3	5	70 sq. ft. or over, but under 90 sq. ft.	1
4	$7\frac{1}{2}$	50 sq. ft. or over, but under 70 sq. ft.	$\frac{1}{2}$
5	10	Under 50	Nil.
and two persons extra for each additional room. No room under 50 sq. ft. should be counted.
