Extract from Collier's Historical Dictionary.

I EONAR D Lessius, a Jesuit, was born near Antwerp, Oct. 1, 1554. He taught Philosophy and Divinity at Louvain in the Fesuits College, and died Jan. 5, 1623, at the Age of 69. He left several Works behind him, which have

been published in two Volumes, Folio.

Lewis Cornaro, defended from one of the most noble and illustrious Families of Venice, was born in the 15th Century. He wrote a Book of the Advantages of Temperance, translated into Latin by Lessius. He died at Padua in 1565, being about a hundred Years old. Thuanus in the 38th Book of his History gives a Character of him, Part of which I shall transcribe for the Reader. " Leavis Cornaro, " fays he, was an extraordinary and admirable In-" stance of Long Life; for he lived a hundred "Years without any Decay in his Health or Un-" derstanding. By his Temperance and the Re-" gimen he observed, he recovered his Constitu-" tion from fome Infirmities, the Liberty of his "Youth had brought upon him; and likewife by " the Force of Thought and Care conquered his na-" tural Propensity to Choler; insomuch that when " he came to be old, he enjoyed an extraordinary " Degree of Health, and was as remarkable for " the Equality and Sedateness of his Temper, as " he had been formerly for his Passion. He wrote " Books on this Argument in his Old Age, in " which he mentions the Diforder of his Youth, " and promises himself a great many Years to " come: Neither was he deceived in his Expec-" tation; for he held out to above a Hundred, " and then died a very easy Death. His Wife, " who was no less aged than himself, survived 44 him."

TREATISE

OF

Health and Long Life,

With the fure MEANS of attaining it:

In TWO BOOKS;

The FIRST by

LEONARD LESSIUS;

The SECOND by

LEWIS CORNARO,

A Noble VENETIAN:

Translated into English by

TIMOTHY SMITH, Apothecary.

Auspicious Health appear'd on Zephyr's Wings;
She seem'd a Cherub most divinely bright,
More soft than Air, more gay than Morning Light.
Hail, blooming Goddess! thou propitious Power,
Whose Blessings Mortals next to Life implore;
With so much Lustre your bright Looks endear,
That Cottages are Courts when those appear.
Mankind, as you wouch safe to smile or frown,
Find Ease in Chains, or Anguish in a Crown.
Garth.

THE

PREFACE.

HE Profusion of Luxury and Intemperance, into which this Age is fallen, renders every Attempt to extirpate them, and to enforce the Practice of their contrary Virtues, not only justifiable, but necessary. In all extreme and desperate Maladies and Disorders, as well of Mind as Body, no Help should be refused: For in fuch Cases, not so much the Means or Instrument, as the Removalof the Evils, is to be regarded. Experience has often confirmed to us, that the greatest Events frequently arise

PREFACE.

arise from the slenderest Causes. Upon this Confideration I have ventured to endeavour, by a modern Translation of the ensuing Treatises of Lessius and Cornaro, the reviving and bringing to light those excellent, though longneglected and concealed Rules and Precepts of Temperance and Sobriety, therein laid down and prescribed to Mankind; without entering into a tedious and laboured Apology for my Inequality to the Task, which, I think, favours more of Pride and Conceitedness in a Publisher, than any unfeigned Lowliness and humble Opinion of himself. And as to the Character and Reputation of the original Treatises, they are too well established to need a Recommenda-Body, no Help thould be refuted

CORNARO'S TREATISE,

Of the Benefits of a Sober Life.

A

HYGIASTICON:

OR, A

TREATISE

Of the MEANS of

Health and Long Life.

CHAP. I.

The Occasion and Scope of this Work.

Treatifes already extant on the Subject of the Preservation of Health, seem at first View to render this present Attempt of mine altogether unnecessary and vain: But when I reslect on the almost infinite Number of Rules and Cautions they abound with, concerning the Quality and Quantity of Meat and Drink; concerning

cerning Air, Sleep, and Exercise; the Seasons of the Year, Purgations, Bleedings, and the like; and, befides, the many different Kinds of Compound, Opiate, and other exquisite Remedies therein prescribed: Andwhen I consider too, into what a Labyrinth of Care the exact Observation of these Things must of Necessity involve Men, and what a downright Slavery it must be to every Person, who endeavours punctually to perform each particular Circumstance in this Matter enjoined him: I fay again, when I feriously reflect on the nice Performance which is required of all these Physical Injunctions; I cannot help flattering myself, but that this Treatise of mine, whose Rules are fewer, less perplexing, and equally as beneficial, will not be deemed impertinent, but meet with a favourable Construction, and kind Reception from the World.

And, moreover, besides the Difficulty of an exact Conformity to fuch a Multiplicity of Rules and Maxims, it is to be remarked, that when Men shall have done their utmost in this Point, the Issue or Success of their Endeavours commonly falls short; nay, many times quite contrary to Expectation: And the Reason seems to be this; either a total Neglect, or flight Observance, of somewhat seemingly trifling and inconfiderable; yet on the critical Performance, or strict Practice whereof, perhaps depended the whole Business: For the Wills and Humours of Men, we know, are stubborn and uncontroulable, and their Appetites too ungovernable to admit of any violent Restraints. Men, we fee,

fee, will, at least the generality of them, eat and drink, and live, according to the ordinary Course of the World, and indulge their sensual Appetites in everything to the full. Thus comes it to pass, that all their other Care and Diligence concerning these Physical Maxims, or Prescripts, in the End produce little or no Benefit at all. Hence proceeds that Aversion, which most Men retain for the Advices and Injunctions of Physicians, and their Forwardness to decline them, and to leave all entirely to Nature and Event. To live physically, they hold, (according to the old * Proverb) is to live miserably; and they look upon it as a very great Unhappiness for a Man to be dieted, to be denied the free Use, perhaps, of an insatiable Appetite, or Defire. To be kept, as it were, under fuch a perpetual Awe and Restraint, they imagine to themselves to be as deplorable a Condition as can befall him. For this Reason they are for giving a Loose to their unruly Desires, without confulting either the Quality or the Quantity of their Food, but fall to it twice or thrice, or oftener in a Day, and flick to it as long, perhaps, as their greedy Appetites will hold out: And when once their Bodies are full and fatiffied, the very next Thing pitched upon, is an immediate Recourse, or Application, for some time, to Business, exercising the Faculties of their Minds in the Contemplation and Pursuit of fomeweighty and important Concerns. There is no fuch thing as perfuading them to the Ufe

Qui medice vivit, misere vivit.

of purgative Evacuations at proper Seasons, or before the Disease begins to gather upon them; concluding all is well and safe within, so long as nothing outwardly appears, or is selt to convince them to the contrary. Thus it happens, that their Bodies at long-run become sull of crude and vicious Humours, which through a thoughtless Continuance do not only insensibly increase upon them, but at last turn to Putrefaction, and grow malignant: So that upon every light Occasion of either Heat or Cold, of Winds or Weather, of extraordinary Labour, or any other Inconvenience or Excess, a dangerous Instammation ensues, and vents itself

in mortal Sicknesses, and acute Diseases.

Many Instances of excellent Men, have I myfelf feen fnatched away by an untimely Death merely upon this very Account; who, nodoubt, might have arrived at an advanced Age, had they but observed a due Regimen; and by their Learning, and good Works, might have been both a Benefit and an Ornament to their Country, and thereby, in all Probability, have added to their own Glory in a better World. Numbers unquestionably there are, of all Sorts and Degrees of Persons, as well Clergy as Laity, who, being either wholly ignorant of, or not duly confidering, this Matter, enjoy but an imperfect Share of Health; and who, for Want of being better informed, or thoroughly convinced of it, find themselves grievously obstructed in their Studies, and in the Discharge of those Offices and Functions of the Mind, which it is, or at least ought to be, their Defire, as well as Duty and Interest, Having to perform.

Book

Having therefore for a long Time feriously and maturely weighed this Point, I at last concluded within myself, that it would prove a Work of no small Importance, to inform the World of that Method of preserving Health, which I myself have so long, and so happily, experienced; and which has for many Years past preferved not only my Body found, but also my Senses and rational Faculties free and clear. The bodily Inconveniencies I laboured under, before I entered upon this Course, were numerous; nay, I was fo far gone, that even the ablest Phyficians of the Times despaired of my living much longer: And no less happy were the Effects of fuch a Regimen to divers others, than to myself; being indeed the very felf fame which holy Men and fage Philosophers of old practifed: And it confifts chiefly in this, viz. a right Ordering of our Diet, and in a certain Moderation of our Meat and Drink: Such a Moderation I mean, as is neither troublesome nor destructive to Nature, but, on the contrary, the very reverse; adding daily as well Strength to the Body, as Vigour to the Soul.

While my Thoughts were intensely employed on these Matters, I was interrupted by a Person of Quality, who brought with him a little Book wrote in Italian, entitled, The Benesits of a Sober Life; which he frankly offered and recommended to my Perusal. The Author of it was one Lewis Cornaro, a Venetian, a Man possed of many excellent Qualifications, liberally endowed with the Gifts of Fortune, and universally esteemed and respected. In which

Book this Course of Life is wonderfully commended to all Men, and confirmed by long and undoubted Experience. I was so exceedingly delighted with the Reading of it, that I judged it well worthy a Latin Version, and highly deferving a Publication.

That this Subject is not foreign to the Profession of a Divine. I would not that any Man should entertain any odd Notions of this Affair, that I, who am a professed Divine, should

take the Liberty of writing on this Subject. In the Theory of Physick I have long ago made a considerable Progress: And I flatter myself, the present Design is no way foreign to the Profession of a Clergyman; in consideration that it is the Divine Virtue of Temperance that is chiefly in Question; to wit, wherein it consists, what are the proper Means to compass it, what may be the true Measure of its Object, how this Measure may be discovered, and, in fine, what are the Benefits and Advantages resulting from it. Such a Search, such a Study, as this, is not wholly physical; for both Divinity and Moral Philosophy are intermixed with it.

Besides, the main End and Scope of my Design is well becoming a Divine: For my principal Aim is the furnishing the Religious and Devout with such Rules and Methods of living, as may make them with the greater Chearfulness, Ease and Zeal, apply themselves to the faithful Service of the Great God, and of our Saviour Christ Jesus. It is indeed hardly credible, with how great Alacrity, and with what inward Consolation, those Persons who addict

themselves

themselves to Sobriety, may (if so be they have any reasonable Notions at all of Divine Mysteries) attend Divine Service and the Preaching of the Gospel, their private Devotions and Meditations, and, in fine, every Spiritual Exercise. And this, in Reality, was the principal View I had in the writing of this Treatife; this my chiefest Wish and Desire. As for the Hep or Advantage that it affords the Studious and Contemplative, I shall say nothing of it hereafter. intending to speak more at large at present, Whether, therefore, you regard the Subject-Matter, or the End, be that as it will; still I look upon it, that this Treatife is no way unbecoming, or unworthy the Pen of a Divine. Thus, friendly Reader, have I given you my Reasons for the Undertaking of this Work.

CHAP. II.

Of the true Meaning of a Life of Sobriety, and of the due Proportion of our Food, viz. Meat and Drink.

BUT (to pass from the general Scope and Design of my Undertaking) I come now to the Matter itself; in treating whereof I shall consider these three Things: First, What is meant by a sober Life: Secondly, What is the Method required to the right adjusting of our Diet: And, Thirdly and Lastly, What are the Benefits and Advantages resulting from it.

As to the first Point, That is properly styled a sober Life or Diet, which stints us in our B 4 Meals,

Meals, and will not fuffer us to exceed the Bounds of Temperance, or to swallow more down, or oftener, than our Constitutions will well bear, and our Stomachs rightly and eafily digest, with Reference to the Functions of the intellectual Faculties. This is what we terman Orderly, Regular, or Temperate Life or Diet: Which Phrases or Denominations we shall severally make use of to fignify one and the fame Thing. The Matter then, about which this Diet is principally conversant, is Meat and Drink; wherein a constant Measure is to be kept; though it equally concerns the Care and Regulation of all other Things; fuch as immoderate Heat and Cold, excessive Labour, and the like; all which heap many Inconveniencies on the Body, and many times disturb at least, if not totally obstruct, the Operations of the Mind.

Now this Measure or Pro-Different Conportion is not the same with re-Aitutions require different Measpect to all, but very different fures. according to the various Constitutions, particular Strength, and unequal Ages, of Men: For one Degree of Proportion is due to Youth when in its Flower, another to Maturity, and a third to Old Age, The Sickly and Infirm, the Sound and Robust, the Phlegmatic and Choleric, have likewife their feveral Measures; in regard, that in such a Diversity of Complexions the Faculties of the What is every Stomach are very different. one's due Measure. Now the Measure of Food ought to be as precifely adjusted to the Quality

and

and Condition of the Stomach as possible; and so indeed it may be said to be very exactly proportioned, when the Stomach kindly receives its Food, and, in the midst of any bodily or mental Exercises, can by its concoctive and digestive Powers turn it into its due and proper Nourishment.

I fay, in the midst of any bodily or mental Exercises, &c. in respect, that Men of robust Constitutions and much Labour require more Food than the Tender, Studious, and Contemplative: For mental Employments greatly prejudice and retard the Concoction; and that, either because, in drawing up the full Force of the Soul, they do, in a manner, lessen and fuspend the Power and Actions of the inferior Faculties: Thus, for instance, when our Thoughts are actually very intent upon Study, we are many times deaf to the very Striking of a Clock, and for the most part blind to, and regardless of, any thing that represents itself to our Sight, or other Senses: Or, it may be, because they do call off not only the animal, but the vital and natural Spirits themselves from their proper Offices. And often from hence it is, that a third Part of the Food shall fuffice those whose Professions or Studies oblige them to read or write much, which is neceffary for them that only apply themselves to bodily Exercises or hard Labour; although an Equality of Age and Constitution might otherwise, perhaps, demand an Equality in both their Diets.

The great Difficulty then lies in finding out this Measure, which St. Austin of old well observed in his 4th Book against Julian, writing to this Effect: " Now, in the Act of that " necessary Pleasure of Eating with which we " refresh our Bodies, who is able in Words to " express, in how bewitching a manner the agree-*6 able Sensation thereof-infatuates and prevents " us from discerning the Measure of Necessity? "For, if there be any of those Provisions, that " yield a more than ordinary Delight in the " Eating thereof, fet before us, we are thereby " quickly and eafily tempted to overlook the * Measure of Necessity, and to go beyond " those Bounds and Limits of Eating, which " are confistent with our Health; whilst we " cannot be prevailed upon to think that " a fufficient Portion, which in reality is fo; " but are ever willingly deluded by their de-" licious Provocation, and fancy ourselves to 66 be about the Business of Health, when in er very Deed we are but too freely indulging ** the Service of Pleasure: So that Lust knows " not the Limitations of Necessity." Thus he ascribes the Cause of this Difficulty to Pleasure, which blinds us fo, that we cannot difcern the Bounds of Moderation; still enticing us on, and perfuading us that we do but make provision for Health, when in Reality we are only contending for Pleafure. The Discovery therefore of this Measure I shall make my Business to discourse of in the second Place, producing Rules for the clear and certain Attainment of it.

Whether Students in Colleges, &c. ought to be folicitous concerning this Measure.

But here, perhaps, it may be objected, that in regular Societies, such as are Colleges in the Universities, &c. no such strict Observance is required

concerning this Measure; inasmuch as either the Statutes of the Societies, or the discreet Orders of Superiors, have allotted a Sufficiency, appointing, according to the different Seasons of the Year, such and such Portions of such and fuch animal Food and light Vegetables, and fuch Quantities of Wine and Beer, as are convenient; each of them being proportioned out by Weight and Measure: So that the Students boldly affirm, there can be no Danger of Excess, with a Proviso they do not exceed their stinted Allowances. It will be difficult, I fear, to convince these Gentlemen, that those Catarrhs, Coughs, Head-aches, Pains of the Stomach, Fevers, and others the like Maladies, which often infest them, are the Effects only of an Excess of their Diet. They will readily enough lay the Blame on either the Winds, a bad Air, too frequent Watchings, tedious Lucubrations, or any other the like external Caufe: But their Opinions and Notions are certainly very erroneous; for it cannot possibly be, that any one particular Stint should be found proportionable to fuch a Variety of Appetites and Complexions: So that what is but reasonable and requisite for an hale, strong, and sprightly Youth, is more than twice or thrice the Portion of an aged, infirm Person. And this, I think, is a Truth, manifest without Demonstration. Now these various

various Allowances, which are appointed at the Difcretion of the Governors and Founders of fuch Societies, are not intended as just Measures for every Man: No; (these Stints being judged fufficient for the Cravings of the strongest and largest Stomachs) but that those, who are of more weakly Appetites, might have an Opportunity of exercifing their Virtue by a voluntary Abstinence, and of keeping themselves within the Bounds of Reason and Moderation: For it is nothing very extraordinary, nor very meritorious, to shew one's felf temperate in the Absence of Temptations; but to be able to fit an-hungry in the midst of provoking Dainties, this is a Virtue, and a Victory indeed, and well pleafing to Almighty God. To the end, therefore, the Exercise of this Virtue, and the Rewards attending it in this, and in another Life, might not be wanting to those who feek and endeavour after them, the Benefactors and Establishers of religious Societies have, perhaps, dealt out a larger Portion, and more of Variety, than is absolutely necessary, or than they would willingly each should confume. In relation to this we have a very fingular Example in the Life of Pachomius, faithfully written above a thousand Years ago, as it is extant in Surius; wherein it is reported, that this very Pachomius, in his Monasteries, and especially in those that younger Students lived in, ordered (besides Bread and Salt and Herbs) fuch or fuch a Dish of more delicate Provisions to be placed before them; to the end (notwithstanding almost all the Monks in general were so abstemious, as to resuse this more inviting Banquet) yet that each of them might have it in their Power however to eat thereof, or to abstain at Pleasure: And so, if either for Mortification-sake, or for the better qualifying themselves for Religious Worship, they should resolutely deny themselves, they might be said to have exercised a greater Virtue; since it is more difficult, and consequently more commendable, to restrain one's Appetite amidst Variety of provoking Dainties, than can possibly be allowed, when those Temptations

are out of Sight, or little thought of.

Nor do I think, that this Opinion will at all appear the less probable for supposing, that in this Allowance of Variety and Abundance there was a direct Intention of giving some kind of Refreshment to Nature; insomuch as the Refreshment intended was not this, namely, that a luxurious Intemperance at any Time should be suffered to be indulged among them; but only that there might be, now and then, an Opportunity of Delight and Recreation administered through the different and grateful Savour of various Kinds of Dishes; however, with this Restraint and Caution along with it, never to permit this * Dulce Furere to tranfcend the Limits of Temperance, nor yet fully to gratify the Cravings of their Appetites: For whatsoever exceeds this Measure, is to be placed to the Account of Vice, let the Solemnity of the Occasion be what it will, whether that of Marriage, Dedication of Temples, or any other the most facred Feast. Now that we must always hold to be Intemperance or Excess, which proves more in Quantity than the Stomach is able perfectly to concoct without the least Remains of Crudity behind.

CHAP. III.

Seven Rules for the better Discovery of this right Measure.

Neafure, it will not be improper to make use of the following Rules and Observations.

The first Rule is, That, in case a Man takes fo much Food at his Meals, as shall thereby render him incapable or unfit for his mental Employments, fuch as Prayer, Meditation, speculative Studies of Learning, and the like; it is then manifest, that he doth exceed that Measure which he ought to keep: For both Nature and Reason demand, that the vegetative Part in Man (that is, that wherein the Growth and Preservation of the Body do confift) should be so managed and nourished, that no Offence or Hurt should be thereby given to the animal and reasonable Faculties of the Soul; inafmuch as the vegetative Part is ordained as an Affiffant to these other, and for that Reason should be of the utmost Furtherance and Aid, instead of an Obstruction to them, in their feveral Functions and Operations. Whenever therefore, on account of the vegetative

vegetative Part, there is so much Food taken as proves of any remarkable Offence or Molestation to the Operations of the superior Faculties, namely, of the Senses, the Imagination, the Understanding, or the Memory; then it is, I think, evidently plain, that an Excess of Diet has been indulged. Now this Irregularity causes Abundance of Vapours to be emitted out of the Stomach into the Head; from whence alone proceed this Offence and Impediment to the nobler Parts, which, as Experience testifies, would be but sparingly conveyed thither, was but a due Measure rightly observed: For all those that are sober Livers, are as expert, brisk, and active, and equally as capable of going through any Exercise the intellectual Faculties shall require, as well after as before their Meals: And this Cornaro himself (whose Treatife of The Benefits of a Sober Life, is hereunto subjoined) doth often testify; and it is no more than what I myself, and divers others of the same Society, do daily experience. Nay, those ancient and holy Fathers, whose Diet was but once a Day, and that but slender, were not one Jot the less qualified for their spiritual Exercises, nor thereby rendered less capable of performing them aright. If so, with how much the greater Ease then may those perform their religious Duties, who divide the Quantity, and twice a-day moderately refresh Nature!

I observed to you before, that those Vapours and Fumes, which cloud or darken the Understanding, do chiesly proceed from the Meat received ceived into the Stomach: Chiefly, I say, in regard that, however this be the principal, yet it is not the sole Cause; for these Vapours arife not only from the Meat immediately before taken, which begins to be dissolved and concocted; but from that Abundance of Blood and Humours also which are lodged in the Liver, the Spleen, and the Veins; which, together with the Food, quickly cause a Fermentation, and convey too great a Store of noisome and acrid Fumes to the Brain. And these are Evils, which a sober Diet can alone rectify; Temperance by Degrees will be able to lessen this Overplus of Humours, to abate this ill Moisture, and to reduce them, both in Quality and Quantity, to their due Proportions; fo that these Fumes, upon a moderate Refreshment only, shall vanish and be no more: For when Nature, by the Ministry of the vegetative Faculties, hath got all the Humours of the Body in a perfect Subordination, she doth so order and dispense all Things, as in a manner to ward off all Diseases from the Body, and will fuffer no Impediment to interfere with the fuperior Functions and Duties of the Soul. Nor is it of any Consequence at all, that Men of fober Characters are addicted to the usual Custom of taking a Nap after Meals; fince it is done by way of Refreshment only, and in order to recruit those Spirits, and recover that Strength, which, it is likely, may have been wasted by any bodily or mental Employments: For Sleep is subservient to both these Ends. Besides, this Nap of theirs is generally very thort,

Numbers

short, and what they themselves could with Ease refrain from: Where it is otherwise indeed, that is, all those who are wont to sleep a good while; it were necessary, that they abate as many Hours of their Night's Rest as they have consumed in Sleep the Day before. But, after all, this Custom of Napping most Physicians hold to be better neglected, as the contrary one is judged to be the most agreeable to Health.

The fecond Rule is, That where there is fuch a Quantity of Victuals taken at once, as doth produce any remarkable Dulness, or Heaviness of Disposition, contrary to what a Man before enjoyed; unless it be by reason of some present Ailment, or by reason of the Remains of some former Indisposition; it is then a certain Sign, that the due Measure has been exceeded: For it is the only Business and fole Property of Meat and Drink, when moderately taken, to refresh Nature, and to strengthen and cheer the Heart. Those Persons therefore, who are of fuch an unhappy Constitution, as to feel a Weight, or an Oppression of Stomach, upon every Meal they eat, would do wifely in lessening their daily Portion, and in weighing carefully the Rise of this Mischief; whether it springs from too great an Abundance of Meat and Drink, separately or jointly: And when they have discovered where the Error lies, they must then immediately (if they value their own Ease and Health) set about rectifying it, by continuing to eat and drink lefs, till the Cause of their Disorder shall intirely cease.

Numbers there are, who are greatly deceived in this Matter, who, although they feed liberally upon what is very nourishing, yet are perpetually complaining of a peculiar Faintness and Weakness of Stomach; which they very injudiciously ascribe to the Want of Nourishment and animal Spirits: Whereupon they fall upon gratifying their Appetites with what is more delicious and luxurious still, and take care to provide Breakfasts betimes, from a vain Apprehension of Nature's finking for Want of proper Sustenance. Thus, as I said before, do they wretchedly impose upon themselves by these their absurd Notions and Opinions: For instead of a timely Abstinence, or some proper Evacuation to disburthen Nature, already oppressed with too great a Store of ill Juice and Moifture, they take a quite contrary Courfe, and, by still forcing more down, foolishly add to their former Disorder: For this Weakness they fo much complain of is the sole Effect of ill Humours, and not of the supposed Want of Nourishment: And this is plain from the Poorness of the bodily Constitution, and also from those frequent Swellings and Gripings of the Belly, the just and almost unavoidable Consequences of fuch high Living. Now the Mufcles and Nerves are vaftly prejudiced by reason of these gross Humours clogging them up; through which the Spirits themselves have their only Passage: Whereby it comes to pass, that the animal Spirits (from which, as from the common and immediate Spring of Life, every Power of Sense and Motion in the Body is derived)

rived) in a great Measure are obstructed in their Course, and debarred that Prerogative over the Body, which is due to them: And thus, merely from the Interception of the animal Spirits through this Excess of Humours, proceeds all that Weakness and Lumpishness of the Body, and Stupidity of the Senses. We daily see Instances of Persons, whose Bodies are thus overcharged with those ill Humours and vicious Moisture I have been speaking of, to confirm the Truth of all this; who every Morning of their Lives feel a Debility, and an Oppression of Spirits, on account of those Superfluities remaining in them after their former Night's Supper and Repose. But when once Abstinence and the Purgations of the Head begin to throw off these bad Effects, a sudden Chearfulness and Activity gradually ensue; and this Vigour would ftill continue to increase upon them, with a Proviso they could be but content to confine themselves to a spare and simple Diet. But in case they indulge themselves in high and moist Foods and rich Sauces, while the Remains of these Moistures lie unconcocted in the Body, their former Indisposition will quickly return again, and create them equal Torment and Uneafiness. The Man therefore that is defirous of preserving his Senses and rational Faculties free and clear, and would be able to act with a sprightly Vigour and lively Apprehenfion, must forbear the spurring of Nature on beyond her Craving; and must, if Need be, in order to expel the contracted Humours, make a proportionate Abatement in his Diet; that

that so the Spirits may have a free, uninterrupted Passage through the several Parts of the Body; and that the Mind also may be constantly prepared, and apt for every Motion and Ser-

vice in the Body.

The third Rule is, That we must be careful not to have an immediate Recourse from an irregular Way of Life to a severe and precise one; but it is to be done cautiously and by Degrees, daily subtracting from our wonted and excessive Luxury by small Abatements; and in this Method are we to persevere, until we shall have at length arrived at that just Proportion, which is no ways burdensome to Nature, nor yet prejudicial to the Operations of the intellectual Faculties*. This is a common Tenet among Physicians, that all violent or fudden Changes, if any thing remarkable, do prejudice or injure Nature; in regard that Custom obtains almost the Force and Quality of Nature itself. Wherefore it cannot be but of very dangerous Consequence for a Man forcibly to be driven from that, whereunto he has been fo long accustomed, and instantly to be obliged rigorously to pursue the very contrary: For, as that which is contrary to Nature, so that likewise which is contrary to long and inveterate Custom, is very grievous and difficult to be undergone: And

^{*} Dr. Cheyne, in his Essay of Health and Long Life, widely differs from Lessus's Opinion; who says, there can be no Manner of Danger in breaking off so pernicious a Custom all at once, as a pretended: That it were as reasonable for him that is tallen into the Fire or Water, to lie there, because of the Danger of removing him suddenly. Vide Page 45.

therefore it is adviseable, that old Habits be shook off by Degrees, and not of a sudden; that, as our Progress in them was slow and gradual, so must our Regress be. And thus the Alteration, the less perceptible it is, the less Difficulty will it create us in the Performance.

The fourth Rule is, That notwithstanding an exact Proportion cannot be precifely adjusted for each Person, considering the various Differences of Mens Ages, Strength, and Difpositions; and also the great Diversity in the Nature and Quality of various Kinds of Food; yet, generally speaking, for those who are much advanced in Years, and for those also that are of weak Complexions, twelve or fourteen Ounces of Food a Day are judged fufficient, and are what ought not be exceeded: And as their Food, so should their Drink be equal. But this is to be understood of those only who are employed in sedentary Professions, or intellectual Studies, and use very little or no Exercise of Body. Lewis Cornaro, the Venetian, greatly extols and approves this Meafure; who himself in the thirty-fixth Year of his Age first entered on this Regimen, and continued in it with perfect Health, and the Integrity of his Senses, to near fourscore Years of Age. The Eastern Christians likewise, who fled from the Persecutions to the Deserts of Egypt and Arabia, lived to a very great Age on this Allowance, with nothing but mere Element for Drink; and according to Cassian, this Proportion was established, as it were by a Law, throughout their Monasteries. Now if thefe

these holy Fathers upon long Observation found twelve Ounces of Bread, without the Addition of any other Sort of Food, to be sufficient. and by this one common Measure preserved their Minds and Bodies found, even to a good old Age; furely then, that same Quantity of Bread, doubled by as much of any other Sort of choice Victuals, yielding twice the spirituous Nourishment, cannot but suffice Nature; especially too, when this Confideration goes along with it, that instead of Water, which was their only Drink, we now allow ourselves in the frequent Use of generous Wines and strong Liquors: And whatever Notions we may entertain of thefe ancient Fathers Abstemiousness, it is certain, they all confumed not even this Measure, but that many ate, and drank, and lived with less.

That this Meafure may fuffice (ordinarily) even the Sound and Robuft. Now although what hitherto has been discoursed of in this Place is chiefly concerning the Tender, the Weak, and the Aged; yet I am of Opinion,

and to me it seems very probable, that this particular Measure is sufficient for those that are in Health and Vigour, and in the Verdure of their Years; I mean, provided they are Perfons, whose Professions lead them to much Use of their intellectual Faculties, and the free Indulgence of speculative Studies. And this is a Truth sounded on infinite Examples of holy Men in former Ages, whose Lives are still extant in History; who, from the Meridian of Life, or before, strictly observed the same Regimen;

little

Regimen; and although Bread, or Herbs, or Pulse, was their only separate Food, and as plain and coarse as this their Manner of Diet was, yet they lived very long and very healthy, even in the Height of their Persecutions. And I am the farther inclined to believe this Measure fufficient, in regard, that in almost all Monasteries it was commonly established, as it were by Law, as ordinarily sufficient as well for younger, as elder Persons: So that the ancient Fathers, whose own better Experience had taught them, what in this Kind was most requisite for Nature, have judged that this same Measure might ordinarily suffice to After-ages: And with this Opinion of theirs does Lewis Cornaro fall in, whose own Example is a Confirmation of it; who, as I observed before, in the Meridian of Life, first began this Stint, and continued it in a Manner punctually to his Diffolution.

The fifth Rule is, That there is no great Regard to be had concerning the Quality or the Nature of the Food, provided the Person is remarkable for, or for the most part enjoys, a sound and healthy Constitution; and upon his eating of such and such Kinds of Meat, no seeming Disorder of Stomach doth ensue: For, generally speaking, any Sort of Food, that is common to one, suits agreeably enough with hale Constitutions, if so be not too much of it be taken at one Time: And thus a Man may live as healthily as he could wish to do, and as long as Nature designed him, upon a Milk Diet alone, with Butter, Cheese, and Beer; especially if from his Infancy he has been used to

littleelse. But from those Foods, Hurtful Meats are to be avoided. though never fopalatable, which are certain to put the Stomach into an immediate Disorder, it is prudent to abstain, at least from feeding too liberally upon them: Among which none ought more industriously to be avoided (because it is generally believed nothing is of more pernicious Consequence) than your fat Meats. These mightily weaken the Stomach, and relax its aftrictive and retentive Faculty; whereby the Concoction is in a great Measure spoiled; and whatever is taken down besides, is apt to flip undigested, and half raw as it were, out of the Stomach. Besides this, there are other Mischiefs consequent hereupon: Fumes are often plentifully conveyed from the Stomach to the Head: These too are often seconded by Dimness of Sight, Coughs, Asthmas, and other Infirmities of the Lungs: And the very Meats themselves too, unless perfectly concocted, (to which End both a good Stomach and Length of Time are requisite) are the Product first of vicious Humours, and then afterwards of bad Fevers; in regard they are converted partly into choleric, and partly into phlegmatic Juices and Moistures. It is adviseable therefore, that Students refrain as much as possible from this pernicious Way of Feeding; and if at any Time they chance to fall in with fuch Provisions, be it remembered, it is to be done but very sparingly, and not without taking a good Quantity of Bread along with them: And this will be a Means partly to avoid the Danger of these intolerable, and too frequently fatal Inconveniencies. Of

Of much the same Nature are all those Kinds of Food, (as it is often feen) that in the Head breed Cataracts, Clouds, Dizziness, Distillations, and Coughs; and that affect the Stomach with Crudities, Flatulencies, Gripings, Gnawings, Frettings, and the like; and, in a Word, all those that any ways injure the bodily Constitution, or impair the intellectual Faculties: For how abfurd and senseless a Thing is it to purchase the vile and momentary Pleasures of Gluttony, at the Expence of fo many Inconveniencies? And certainly there cannot be a plainer Demonstration of a Man's Slavery to this Vice, than when he immoderately fills his Belly, and pours in that, which he is already but too sensible is so very destructive to his Constitution, purely to gratify the Craving of a liquorish and an inordinate Appetite. Now, when I say it is a Man's Interest, and an Obligation which he is under, to deny himself these Kinds of Food, I would not be understood to mean, that a Man may never venture on them at any particular Time, or any extraordinary Occafion: No, what I would willingly be understood to mean, is, that I would have them but very feldom used, and then but very sparingly: And thus it may be, nay, it often happens, that those very Provisions, which, when taken in larger Quantities, are manifestly injurious, do, in less Proportions, even benefit Nature.

Among all these Kinds of Food, there is none, in my Opinion, more proper for aged, infirm Persons, than Panado;

Panado a very convenient Food for the Aged, &c.

which, (as Lewis Cornaro testifies) with now and then an Egg or two, is alone sufficient for the Sustenance of Nature; and a Diet, on which any Person may live to a great Age with Chearfulness, and a good State of Health. Panado is the Italian Name of that Kind of Pap or Gruel, whose Composition is nothing else but Bread and Water, or some Flesh-Broth stewed together. The Reasons why this Kind of Food is deservedly so much in Esteem, and so very excellent, are, because it is most light and easy of Digestion, and so very like that Chyle which the Stomach itself makes by the Concoction of Meats. It is remarkable also for its most temperate and inoffensive Qualities, and for its being less subject to Putrefaction and Corruption than many other different Kinds of Food are. Besides all this, it makes a Plenty of good Blood; and, if required, it is still capable, with the Addition of a very few Ingredients, of being made warmer, and more comfortable, and nourishing to the Stomach: So that worthily was it spoken by the Wise Man, Ecclus. xxix. The Principal of Man's Life are Bread and Water. The Import of which Words is, that these are, and ought to be, a Man's chief Support: And, as the Wife Author of our Being originally defigned them as alone sufficient for the Prefervation of Life, the follicitous Pursuit of expensive and delicate Varieties, as they administer only to Lust and Gluttony, is altogether needlefs.

Plutarch, in his Treatise of Health, disallows of Flesh; where he says, "* That Crudities are es greatly to be feared upon fuch Meals: For the eating of Flesh, even upon the Stomach's immediate Reception thereof, doth very or much oppress it, and, upon its passing off, is apt too frequently to leave behind malignant Remains. It were therefore certainly best so 66 to inure the Body, that it should not need or " require the Feeding on any Flesh at all: For the Earth produceth in Abundance Eatables, 66 fufficient as well for the Delight or Gratifica-"tion, as the Support or Nourishment of the " Human Constitution; great Part whereof " may be eaten simply as they are; and the other, by the various Forms and Compositions of Art, may be rendered very palatable and " very agreeable." With this Opinion of Plutarch many Physicians join; and Experience, the most undeniable Proof of all, confirms it: for there are many Nations, who seldom eat any Flesh at all, but live chiefly on Fruits and Rice, and by this same Course of Diet prolong their Lives and preserve their Healths very wonderfully: Such are the Inhabitants of Japan, the Chinese, the Africans, and the Turks. Nor need I to have wandered abroad into History for

^{*} Maximè cruditates metuendæ sunt ab esu carn'um. Nam hæ & initio statim valdè prægravant, & reliquias post se malignas relinquunt. Ac optimum quidem erat ita corpus assuesacere, ut nullum id carnium requireret esum: non enim modò ad nutriendum sufficientia largiter tellus producit, sed etiam ad delectationem & vo'uptatem; quibus partim nullum alium apparatum requirentibus vesci possis, partim sexcentis modis miscere & suavia reddere. Plutarchus lib. de sanitate tuenda.

Instances of this Nature: The very self-same Thing is to be seen at home among our own Countrymen, and many others of mechanic Employments; whose ordinary Fare is Bread and Cheese, or Butter, Pottage, Pulse, or Herbs; seldom indulging themselves in Flesh: And yet how hale, hearty, and strong, are they! And who, generally speaking, live longer, or indeed so long, as the low and temperate Feeders? Not to mention any thing of the Fathers in the Defert, and of all Monasteries of old.

Variety of Dishes prejudicial to

The fixth Rule is, That it is absolutely necessary, that every Man (the Preservation of whose Health is at Heart) should above

all Things forbear Variety of Dishes, and the luxurious Artfulness of Cookery. Upon this Account is it, the most learned Physician Difarius, and even Socrates himself, endeavour to diffuade Persons from tampering with those Meats and Drinks, qui ultra sitim famemque sedand am appetentiam producerent; " which lengthen out "the Appetite beyond the natural Cravings of " Hunger and Thirst." And this, indeed, is a common Rule to all Physicians; and the Reafon why it is so, is, because Change and Variety are grand Incentives to Gluttony, and strong and endless Provokers of the Appetite: And thus comes it to pass, that the due Proportion is enormoully exceeded, and oftentimes three or four Times as much as would suffice Nature, is swallowed down at one Meal, purely to gratify a sweet Tooth, or a brutal Itch. Besides, there is a great Diversity in the very Nature and Tem-

per of various Sorts of Food; and these are often very contrary to each other in their Consequences; for some are sooner, others later in their Digestion: And this is an Inconvenience, from whence fpring intolerable Mischiefs, such as Wind and Crudities in the Stomach, Gripings of the Bowels, Colicks, Obstructions, Pains in the Reins, and oftentimes that most racking Disease, the Stone itself; and, in a Word, a total Depravation of the Digestion. And these Evils, as I told you before, follow upon fuch a luxurious Intemperance and ill-chosen Diet, which will not fail, sooner or later, to corrupt and vitiate that Chyle, or Juice, which is the main, nay, the only Recruit of either good or bad Blood, and consequently of either good or bad Spirits. Whereupon Francis Valeriola, an excellent Phyfician, in one of his Chapters on this Head, argues thus: " * That all Phyficians have been " equally of the same Opinion, that nothing is " more pernicious to Men's Health, than Variety and Plenty of Meats at the same Table, and making long Meals." And Kenophon, in his first Book of the Sayings and Doings of Socrates, writes, That his Diet was most spare and simple, and fuch a one, as it was in every one's Power easily to procure, as well as Socrates; it being of fo trifling an Expence, and fo very ordinary. Athaneus out of Theophrastus reports likewise, That among others there was one Phalinus, who used nothing else but a total Milk Diet: And

^{*} Ciborum varietate & copia in eadem mensa & prodectione in longas m ras, nihil nocentius homini ad salutem, omnibus ex æquo medicis visum est. Locor. Comm. lib. 2. cap. 6.

again, according to Pliny, one Zeroastres lived 20 Years in the Desert on Cheese only, which was so remarkably tempered, as never to have been impaired by Age. In a Word, although the Quantity of Food may indeed be varied according to the Age, Sex, Nature, Strength, the Country the Party is of, and the Exercise he uses; yet still, as well in the present Age, as it was once in the former Ages of the World, Persons of all Sorts, and of every Nation, will live more healthy, and longer, by universal

Temperance, than otherwise.

But to proceed to the seventh and last Rule: Whereas the main Bufiness, or chief Difficulty, in fixing and punctually observing a due Regimen, proceeds from the fenfual Appetite; and as that very Appetite is derived from the Apprehension of the Fancy or Imagination, whereby Meats are conceived to be delicious; special Regard must be had, in order to correct and cure this dangerous Conceit betimes: Towards the more effectual Accomplishing of which, two Things especially are absolutely necessary; the one is, That a Man do (as much as conveniently may be) shun Assemblies and Company, and withdraw himself from Feasts and Dainties, whose more agreeable Sight and delightful Smell ferve only to stimulate the Appetite, and insensibly to cheat Men into Excess and Gluttony: For the Presence of every Object is naturally moving and affecting, and operates upon the Faculty to which it properly belongs; and therefore it is certainly more difficult to curb the Appetite, when in the tempting View or immediate Expectation.

pectation of some inviting Banquet, than not to long for what is absent, or at an unknown Distance: And the very self-same Thing holds good too in all the Objects and Allurements of every other Sense. The other Thing, that is so very conducive to the same End, is, to endeavour to be thoroughly perfuaded or convinced, that the bewitching Charms and Enchantments of Gluttony are not what they at first externally appear to be, exquisitely palatable and agreeable; but, on the contrary, exquisitely fordid, ill-favoured, and detestable, as Experience too often, and too foon convinces Numbers: For all Things, when resolved into their Principles, discover what in reality they are, and manifest what that was that lay disguised under that grand amiable Appearance, with which they were presented. Now what can be imagined more noisome and disgustful, than these various and rich Foods and high Sauces, when once they have undergone a thorough Change in the Stomach? And it must be allowed, that the greater the Artfulness or Luxury is, that is used among them, the more noisome consequently will be their Savour, and the more pernicious still their Effects. And thus it falls out, that some People, through an Excess of high and fumptuous Living, are by and by constrained to have Recourse to the Assistance of outward Perfumes, in order to qualify or allay that otherwise intolerable Odour of their Bodies. Their very Breathings and Excrements too shall become most foul and stinking, and at long-run equal in a Manner to Putre-C-4 faction

faction itself: The contrary whereof none more fully, or more happily experience, than your hale, robust, fresh-coloured Peasants, and mechanic Artificers, who contentedly live on plain Country Fare, with Temperance and due Labour.

And this Happiness of Constitution, so peculiarly adapted to Temperance and Sobriety, is the admirable Contrivance and Ordinance of the Wise Author of our Being, to the End we might be the fooner, and the more effectually wrought upon to contemn splendid and sumptuous Entertainments; to retrench our Extravagancies, and to recall and amend our Follies; to abandon our Excesses, and to become daily the more prudent, no less in the Choice of than temperate in the Use of all Things. And if Health, and Ease of Body and Mind, and Length of Days, (Bleffings, which the Generality of Mankind are apt to efteem the greatest that can befall them in this Life) are not of themfelves Encouragements powerful enough to work in us an entire Reformation; yet, if we will be but at the Pains seriously to reslect a little, (as indeed it is a Matter which well deserves our most frequent and serious Meditation) we shall soon be convinced, to our much greater Comfort and Encouragement, that an holy Sobriety extends its Views still farther, even beyond the unrelenting Grave; and that it carries its nobler and eternal Rewards along with it. So true it is, that Godliness hath the Promise of this Life, as well as that which is to come.

CHAP. IV.

Certain Doubts and Objections answered.

A Sthere are two Doubts or.

Questions, which more altered.

Whether this Measure be to be altered.

immediately offer themselves toour Consideration in this ensuing Chapter; the first I shall take Notice of is this: Whether or no it is not proper both the Quantity and Quality of Meat and Drink should be varied according to the different Seasons of the Year; forasmuch as a larger Portion of Food seems more agreeable to Winter than to Summer, in regard that in the Winter-time (as Hippocrates affirms, Sect. I. Aphor. 15.) Men's Bellies are hotter, by reason of the cold Air without forcing the Heat into the inward Bowels, as it were from the Circumference into the Centre: But in Summer (vice versa) Men's Bellies become more faint or languid, in regard that by the Warmness of the Air the Heat is forcibly extracted from the inmost Parts, as it were from the Centre to the Circumference, and there distipated. In like Manner drier and hotter Kinds of Provisions feem more requisite for the Winter Season, by reason of the Abundance of Phlegm which is then bred, and is not so easily and readil; dissolved: But, in the contrary Season, a moist and cooling Diet is much more proper; inasmuch as, through the Heat of the external Air, there happens a great and copious Effusion of Humours, and an Over-heating and Parching of the Body.

5

In answer to this, I say, That, how closely soever we ought at all Times to adhere to the approved Maxims and stated Rules of Physicians, yet in this Particular, however, an Over-preciseness, or Scrupulousness, is not material: For when there is an Opportunity of Compliance wanting, we need not be extremely follicitous concerning it: For in case we find Necessity of a drier Kind of Diet in Winter, or long continued moist Weather, which cannot readily be procured; this is an Inconvenience, which may eafily be remedied by increasing our Stint of Bread, or by lessening that of our Drink, or other moist Nourishment: For the Abundance of Liquor, or other moist Food, which in a dry Summer feems mostly beneficial, will (if continued many Days together, when once the Air is grown raw and cold) in all Probability even prove prejudicial; because it is many Times apt to occasion Distillations, and to produce Coughs, and Hoarsenesses of the Lungs: And again, on the other hand, when a moister Kind of Diet feems most requisite, the Portion of our Liquor may be augmented by diluting our Wine with a little more Water; or, what is as well, we may drink clear Small-Beer of a due Age, which is of itself alone sufficient to moisten and refresh the Body. I no where remember, to the best of my Knowledge, that the holy Fathers of old made any Account at all of this Diverfity of Seasons; but that they appointed one and the same Measure of the same Kinds of Victuals annually to be observed among them; and in this Method of Diet did they constantly and punctually persevere; and yet notwithstanding they

they arrived at a green old Age. But in this present Age there is a Plenty of Provisions in all Societies, as well civil as religious; Provisions proper for each Season, and for every Occasion: So that every Man, who follows and delights in a Course of Temperance, may indulge himself in whatever he fancies to be most agreeable to his Palate: And I hold, it may be done with Sasety, and without Blame, if at the same Time upon Experience he finds it to be no less agreeable to his Constitution.

The fecond Doubt or Queflion to be confidered, is, Whether or no this Measure and Stint, which we have prescribed, orany other, that Men shall judge most convenient for them, ought

Whether the daily Messare or Stint ought to be taken all at once, or divided into Portions.

to be taken at one, or more Meals. To which I answer, That however all the Ancients, who were fo eminently temperate, were content with but one Meal a Day; and that, according to Cassian, was either after Sun-set, or at the ninth Hour of the Day; yet there are Numbers, besides myself, who are of a different Way of Thinking, and hold, that the Aged, the Sickly, and the Weak, should divide the Quantity. And the Reason is plain; because those very Persons not being able to take much Suffenance at once, it is better that they eat the oftener, and less in Proportion, the more frequent the Repetition of their Meals is: For hereby will the Inconvenience of a disordered Stomach be avoided, and the Digestion too rendered much lighter and eafier by far: Wherefore it is adviseable, that they

C 6

take seven or eight Ounces at Noon, and at Night about half the aforesaid Quantity, or otherwise, as they themselves upon Trial shall learn to be best and safest for them. But after all, in these Cases, long Custom bears a mighty Sway: And there is a great deal of Regard also due to the Disposition of the Body; for, if the Stomach abound with cold and tough Phlegm, it feems expedient that a Man should make but one Meal a Day of animal Food, confidering - the Length of Time requisite for its perfect Concoction and Dispersing. And this I myself have abundantly experienced, both to my Satisfaction and Advantage. However, it will not be amiss to take some little Matter at Night; and what I would willingly advise a Man to, are fuch, in particular, as may serve in some Measure to dry up the vicious Moisture of the Stomach; viz. a few Jar-Raisins with Bread, or some other light Food, endowed with the like drying Properties: For all those, who are thus unhappily affected, cannot be too careful, nor too speedy, in correcting this Evil as effectually as may be; fince from this very Indisposition the Stomach is troubled with Flatulencies, which naturally ascend up into the Brain, and affect it with a Swarm of noisome Effluvia. Sapientia (fays one) in sicco residet, non in paludibus & lacunis. Whence Heraclitus: Anima sicca, sapientissima.

But here, perhaps, it may be objected by some, in Consutation of what hath been already delivered, that this stinting a Man's self in his Food is attended with some bad Consequences, and is an Error, which many excellent Physicians

have

have thought fit to reprove : For, fay they, the Stomach is hereby contracted, and at length becomes fo much accustomed to this fixed and proportionate Measure, that, if at any Time it chance to exceed, the Capacities of receiving being, as it were, forcibly enlarged and extended, it fuffers much in its Oppression from its unnatural Load: In order to remedy which Inconvenience, they argue, that no Person ought precifely to follow one particular Regimen, but to allow himself a little more freely in his Diet at one Meal than at another: And this Opinion of theirs Hippocrates himself seems to fall in with, and to confirm, in his fifth Aphorism, Sect. I. where he fays, * " That a very slender, stated, "and exact Diet is dangerous, even in the Health-"ful and Sound; because it is with much great-" er Difficulty, or Trouble, that they bear with " any Failures or Omissions in this their Course. " of Temperance: Therefore on this Account " a slender and exact Diet is more dangerous " than one a little more plentiful."

My Answer is, That this Rule takes place in all those that have neither Conduct nor Discretion enough to continue long in the same Course of Temperance and Sobriety; who are still so little Masters of themselves and Appetites, as easily to be diverted from their wonted Regularity, whenever Provisions of Number, Plenty, and Delicacy, tempt them to Sensuality; and more especially, whenever the persuasive

^{*} Etiam infanis periculosus est valde tenuis, & constitutus, & exactus victus; quoniam delicta gravius serunt. Ob hoc igitur tenuis & exactus victus periculosus est magis quam paulò plenior.

Arguments, and strenuous Sollicitations of agreeable Friends and chearful Company unanimoufly conspire at the same Time, towards gaining them Members of their Society, and Partakers of their Excelles. These Persons, I will allow, may derive to themselves many Inconveniencies from their Folly, and Weakness, and Inconstancy; and not undefervedly: But the Case is widely different with those who can resist these proffered Occasions and Excesses whenever they please, and are so far their own Masters, as to be able to persist in their usual Course of Temperance and Frugality. To them a fet and exact Diet is most agreeable and fitting; more especially, if they are Persons in Years, and of weakly and tender Constitutions; as both Reafon and Experience do evidently demonstrate. Nor doth it argue greatly, if now and then, upon some particular Occasion, they are tempted to exceed, fince (Iamperfuaded) little Prejudice can accrue, merely from one or two Excesses, to fuch Persons as are sober in the main, and are careful to make it up by a greater Degree of Abstinence afterwards. As for Instance: Allowing any fober Person be prevailed upon to indulge himself a little more freely in his Diet at Dinner, then let him forbear any Supper at all: Or, if at any Time at Supper he is drawn to exceed, then it will be proper for him to omit his Dinner the next Day following. And this is an Inconvenience not of fuch mighty Moment, one should think, that, on purpose to avoid the Hazard thereof, a Man should be against, or discouraged from binding himself ordinarily to a fet

fet Measure of Diet; inasmuch as these accidental Excesses, so they break out and blaze but seldom, are rarely prejudicial, even to the Aged and Insirm.

But in case indeed this Intemperance or Irregularity be fuffered to undergo frequent Repetitions, and its Continuance to prevail many Days together; they, who have been once accustomed to a low and light Diet, will be fure to heap upon themselves manifold and fore Disorders; more especially those who are already well stricken in Years, or are of fickly declining Natures. In Confirmation of the Truth and Certainty whereof we have a notable Instance in the Person of Lewis Cornaro, the Venetian; who, as himself testifies, from the 36th Year of his Age, to upwards of 74, during which Time he lived upon the scanty Allowance of 12 Ounces of Food, and 14 of Drink, per Diem, enjoyed his Health very prosperously: But when once he came, through the irrefistible Importunity of some of his Friends, to deviate from his accustomed Manner of Life, he foon was convinced of the unhappy Difference. Himself tells us, in his own Treatise of Temperance, That this Change brought on him a violent Pleurify in his Side; that it created him many wandering Pains of Body, and at length threw him into a very fevere high Fever, which held tormenting him 35 Days without Intermission; fo that the Phyficians judged him past all Hopes of Recovery. He also farther adds concerning himself, that Death must shortly and unavoidably have been his Fate, fince Medicines were all in vain, had

not he made a timely Return to his former Courfe of Temperance and Sobriety; by the mere Force whereof he recovered, and lived many Years afterward with great Chearfulness. The like Instance of a Person, I myself remember to have happened; whose Custom it was, to make his Dinner his chiefest Meal, not caring for much Supper: And while he followed this his chosen and approved Regimen, he enjoyed a large Share of Health; but upon his recanting his Method of Living, through the Persuasions of some of his most intimate Friends, who advised him to. take a little more largely at his Suppers, he in a very short Space of Time became full of Complaints, from the cruel Pains which affected his Stomach and Bowels in so terrible a Manner, as, it was thought, did endanger and threaten his very Life: And notwithstanding, by the Help of many Remedies, and the Care and Advice of very knowing Physicians, he was twice relieved, and happily set free, still he relapsed a third Time into the same Passions and Disorders: Whereupon, finding little Encouragement either from the Art of Physic, or Physicians, he was at length determined, upon this his third Relapfe, to betake himself to his former wonted Course, which he no sooner entered upon, but found mighty Benefit, and his Pains to affuage daily; and in a few Weeks he was so perfectly brought to rights again, that no feeming Diforder did remain, fave only a great Debility and Weakness of Body, which his dry and sober Diet quickly rectified: For it is neither the Abundance, nor the Daintiness of Food, that strengthen

ftrengthen and support Nature; but the moderate Use or Quantity, equivalent to the Strength, and the good Condition of what we eat, answer-

able to the Constitution of the Body.

Nor is Hippocrates's Aphorism, before alledged, contrary to this Opinion of ours: For what he there signifies by a spare Diet, is of so small Nourishment, and besides so little in Quantity, as is not sufficient for the Upholding of a Man's natural Strength, and the Support of his Constitution: But we admit of all Manner of Victuals, that are agreeable to Nature, and such a proportionate Measure of them, as best suits the Stomach, and mostly tends to the Preservation of Health.

It is likely indeed some may fay, It is not in every one's Power, at least not with equal Ease and Convenience, to ob-

Purging feafonably, another Means of preferving Heal h.

ferve this exact Course of Diet. What then? Can there be imagined no other Way for a Man to preferve his Health and prolong his Life by? Undoubtedly there may; namely this: That twice every Year, viz. Spring and Autumn, the Body be well purged and cleanfed of all its sharp and crude Humours. I speak of all those who do not ordinarily use much Exercise of Body, but are altogether intent upon intellectual Studies; fuch as Gentlemen of the Long Robe, Lawyers, Students, and the like. Nor ought this Purging to be but after a good Preparation of the evil Humours, and then not without the Advice and Direction of some honest and skilful Physician: Neither will it be by

any means fafe or proper to undertake this Business rashly, by a too heady, or a too speedy Repetition of Medicines one upon the Neck of another; but it is to be done gently, cautiously, and judiciously, by taking suitable Remedies for two or three Days together. Thus will the Physical Regimen be the more easily borne, and its Virtues or Effects communicated with double Relief and Benefit to the Patient; for, on the first Day, the first Region, (as it is termed among Physicians) that is, the Inteftines, are to be purged; on the fecond, the Liver; and on the third, the Veins, in which lies the great Source of vicious Humours; for all those Persons, that in any Sort live intemperately, do daily add fresh Supplies of bad Humours, which being fucked, as it were by a Sponge, into the Veins, are dispersed throughout the whole Human Machine; so that in two or three Years Space there shall be collected together fuch an huge Mass of crude Humours, as one would imagine impossible for the Habit: to contain.

Now these Humours at long-run do corrupt and putrefy, and bring upon a Man mortal Diseases, and are, in sact, the sole and true Cause of so many unhappy Wretches dying before their Time: For almost all, that die before old Age, do sall by this very Means, namely, by their Intemperance and Excess; save those very sew, in Comparison, who are slain by outward Violences, either by the Sword, or Fire, or Water, or wild Beasts, or by any other the like satal Accidents; as also excepting those, whose Lives

Tives are finished by either the Plague, or Pestilence, or Poison, or by some other the like fatal Infection. And it is not to be queftioned, but there are a great Number of Souls, who, with a Store and Plenty of all Things good in their Possession, do die and perish through this Abundance of malignant Humours in their Bodies; who, had they been condemned for Galley-Slaves, and kept fober on Bread and Water, might have endured less, enjoyed a better State of Health, and longer Life. This Danger therefore may in a great Measure be avoided by purging seasonably, at least twice every Year; for thus will it be found upon Experience, that neither the Quantity of ill Humours will be so very large, nor their Malignity fo great, being evacuated and kept under by proper Medicines, taken as before directed: And many, who have been careful in observing this same Method, have I myself known to have arrived at a good Old Age, and to have passed their Days in innocent Mirth, and with Freedom of Spirits, uninterrupted by any remarkable Sickness or Disorder.

CHAP. V.

Of the Benefits arising from a sober Diet to the Body; and the first is, That it preserves a Man from almost all Diseases.

AVING finished the two first Heads
I proposed to treat of, viz. The true
Meaning of a Life of Sobriety, and the Method
required

required to the rightly adjusting of our Diet; we come now, in the third and last Place, to consider and explain the Benefits which accrue to the Soul and Body from a Life of Tempe-

rance and Sobriety.

The first Advantage is, That a Man is hereby difencumbered and released from almost all Sorts of Ailments: For a regular Life drives away Catarrhs, Coughs, Phthisics, Vertigoes, and Pains both of the Head and Stomach; banishes Apoplexies, Lethargies, Epilepsies, and every other ill Affection of the Brain: It also prevents the Gout, the Sciatica, and Rheumatism, and even Crudity herself, the Parent of Diseases; and, in fine, so tempers the Humours, and preserves them in such a due Proportion, that they offend no way either in Quality or Quantity. Now, where there is an agreeable Symmetry among the bodily Humours, there can be no great Store of Seed, or Materials lodged productive of Diseases; inasmuch as the true Cause or Means of Health consists in this, namely, that the Blood, and confequently the other Juices, be rightly and proportionably tempered in the Body. And this both Reason and Experience do confirm: For we may daily obferve, that those, who lead temperate and sober Lives, are rarely molested with Distempers; and, if so be they chance at any Time to relapse, they are certain to bear them with more Patience and better Resolution, and, besides, to obtain a much speedier and happier Issue out of their Sufferings, than those are wont to do, who have been chieffy instrumental to their painful

painful Miseries and Disorders by a Life of Lewdness and Sensuality. There are many Persons, with whom I am well acquainted, who, although they are weak by natural Constitution, and far advanced in Years, and almost continually employed in speculative Studies, yet by this temperate Regimen live in Health, and have passed the major Part of their Lives, which has been not a few Years, free from any dangerous Symptoms of any remarkable Diftemper: And the felf-same Thing too is to be made good by the Examples of the Fathers and Monks of old, who prolonged their Lives to a very long Date, with the utmost Chearfulness, Ease, and Health, by means of a spare and low Diet.

And the Reason of all this is, because almost every Disease, under which Mankind ordinarily labour, receives its Rife from Repletion; that is, from Men's taking down more Food than either Nature wants, or the concoctive Powers can dispense with: In token whereof we find, that almost all Diseases obtain their Cure from Evacuation, which is effected many Ways, whether by Lancet, Leeches, or Cupping-Glasses; or by Vesicatories, Issues, or Setons; or by any other Chirurgical Art, or Physical Method, the Materia Medica directs, for the Lightening and Relief of oppressed Nature. To these Rules of Practice are added and prescribed Abstinence and Spareness of Diet: Whence it evidently appears, that the Disease was bred by Repletion; for Contraries are cured by Contraries.

Contraries: Whereupon Hippocrates faith *, Whatever Diseases are bred by Repletion, are cured by Evacuation; and those that proceed 66 through Evacuation, by Repletion." But these latter rarely happen, and hardly ever otherwise than upon a Famine, Sieges, Sea-Voyages, and the like Events: In which Cases the adust Humour, which the Heat through Want of Food hath bred and kindled, is first to be removed; and then the Body by Degrees is to be nourished and strengthened, by supplying it with a gradual Increase of Sustenance. fame Course also is to be taken for the Recruit of Nature, when, from great and grievous Sufferings of repeated Fits of Sicknelles, the Evacuations have been manifold; whereby the bodily Strength or Constitution has been greatly exhausted, or very much damaged and reduced. Since therefore, as I said before, almost all Diseases proceed from this Ground, viz. from a Redundancy of Nature; it will follow of Confequence, that whofoever is fo wife as to observe a just Medium in his Cups and in his Diet, shall happily escape, or be freed from, almost all Diseases: Which Thing is also intimated in that famous Saying of Hippocrates, 1. 6. Epidem. Sect. 4. + Aounois Tyeins, auwpin Tpopis, aonvin Hovav. It is a Maxim of Health, to eat without Fulness, and to be diligent in Labour.

^{*} Quicunque morbi ex repletione fiunt, eos evacuatio sanat; et quicunque ex evacuatione; repletio. Sect. 2. Aphor. 22.

† Studium sanitatis est, edere citra saturitatem, et impigrum esse ad labores. Hippoc.

Wherein he attributes the Preservation of Health to Sparingness of Diet, and bodily Exercise.

The very same Thing too is confirmed by that which Phy- sent of Diseases. ficians affirm, that Crudities are

ficians affirm, that Crudities are the first Original or chief Cause of all those Diseases wherewith Mankind are ordinarily molested. Whereupon Galen, in his 1st Book de Cib. bon. et mal. Succ. faith, * " Nobody will " ever be feized with a Disease, who takes " fufficient Care not to fall into Crudities, or "Indigestion." [i. e. that eats no more than he can eafily digeft.] And with regard to these Crudities, the usual Saying is, Non plures gladio, quam occidere gula; " that more fall by Sur-" feits, than by the Sword." And Holy Scripture faith, Eccluf. xxxvii. 31. Many have perished by Surfeits; but he that is temperate, shall prolong his Life: And in the Verse preceding, Be not greedy upon every Dainty, and pour not thyself out upon every Meat, for in many Meats there will be Sickness. Now a sober Course of Diet doth ward off these Crudities, and thereby totally eradicates and destroys the very Ground-Work of Diseases. What we call Crudity, is the imperfect Concoction of Food; for, when the Stomach, either by taking down more in Quantity, or Things stronger in Nature, and of greater Resistance in Quality, than the Supplies of Action and Living require, finds that the active and concoctive Powers of

^{*} Nemo morbo corripietur, qui accurate cavet ne in crudi-

the Solids are insufficient for them; then that Chyle or Juice, which is made of the Food fo taken, is said to be crude, that is, raw, or to have Crudity in it; which introduces into the Habit a black Train of dangerous, nay, fatal Consequences: For, in the first Place, it affects, and fills the Brain and Bowels with phlegmatic and bilious Excrements; in the next, it occasions a mighty Store of Obstructions in the narrow Passages of the Stomach; in the third, it corrupts and vitiates the whole Temper of the Body; and, last of all, stuffs the Blood-Vessels with such a Mass of viscous, morbific Matter, that the Individual must of Necessity fuffer Diseases, Pains and Miseries, in proportion to the Greatness of the Over-Balance.

These Things might be severally and largely demonstrated; but the Thing being sufficiently manifest of itself, especially the first and second Point, I shall therefore proceed to explain only the third and fourth. When the Chyle is crude, or malignantly concocted by the Stomach, and rather corrupted than digested, (for so Aristotle calls it, μόλυνσιν, not ωέπσιν; a Corruption, not a Concoction) there cannot be produced pure and uncorrupted Blood in the Liver, out of fuch viscid and gross Chyle, but, on the contrary, what is only very foul and putrefied; for, as Physicians affert, the second Concoction cannot amend the first. Now, as a rotten and corrupt Tree cannot produce good Fruit, fo neither is it possible, that the impure Mass of Blood fhould be capable of yielding any found or folid Nutriment to the Body; but of Necessity

its whole Texture or Temperature must be evil tinctured, and so become obnoxious to terrible Symptoms and Diseases: For the third Concoction, which is carried on in the most minute Pores of the Body, (where the Blood is affimilated to every Part, which it is designed to nourish, and lastly, disposed to the receiving of its Form) cannot amend the second. Thus the animal Machine, by reason of these Crudities and Foulnesses, is by Degrees changed, corrupted, and made subject to an infinite Number of Mischiefs. Again, the acrid and sharp Crudity of the Chyle is the Cause, that the Veins throughout the whole Body abound with a Mixture of impure and foul Blood; wherein are engendered and secreted many bad Qualities. or evil Humours, which by little and little do putrefy, and at long-run upon the flightest Occasions become inflammatory, and vent themfelves in very deplorable and grievous Symptoms; whereby Multitudes are unhappily swept away, and perish even in the Verdure of their Years. These dreaded Inconveniencies a sober Course of Diet doth relieve, by taking away those Crudities; which are the very Source and Root of all: For when there is no more received into the Habit, than the concoctive Powers can well manage; and, befides, when there is Time too sufficient allowed them for their proper Work or Business; Crudities then can find no Admittance; but the Chyle must of Consequence be rendered good and agreeable to Nature: And from good Chyle springs good Blood; from good Blood, found and wholefome

wholesome Nutriment; which never fails to beget, in and throughout the whole animal Oeconomy, a complete and perfect Harmony: So that a good and firm Constitution of Body and Health are hereby established and preferved.

Health confifteth in two Things, viz. In the due Proportion and Symmetry of the
Humours, both in respect of their Quality
and Quantity; and in a certain spongy Kind of
Disposition throughout the whole Body, having no Let, or Impediment, by Obstructions;
so that the animal Spirits are at their full Freedom or Liberty, and the Blood too, and other
Juices of the Body, kept in a due Degree of

Thinness and Fluidity.

Nor are Temperance and Sobriety only effectual in the Prevention of crude Humours. but also of Efficacy in wasting and extirpating those Superfluities of Nature, which a Mal-Regimen may have already occasioned, and that more fafely and effectually than any Kind or Degree of Exercise whatsoever can pretend to; as the celebrated and most learned Doctor Viringus doth shew in his 5th Book of Fasting, where he fays, " that Labour doth only con-" fusedly stir the Body, and always exerciseth " fome Members more than other, and most " commonly only fome few Parts alone, and " many Times even those few Parts not with-" out a great and dangerous Hurry and Pertur-" bation of Humours, with the enfuing Hazard of either a Surfeit, or Fever, or some pleu-

66 ritics

ritic, or other Kind of Disorder; creating " much Pain and Torture to the poor Sufferer, " and perhaps threatening at the same Time his " very Life: But Abstinence penetrateth far " more deeply, even into the remotest Reces-" fes of the Body, and with Ease and Equality " promoteth a general Evacuation." For it extenuates its over-thickened Blood and Juices, opens its feveral Obstructions, throws off all its superfluous Excrements, and in fine gives a Flow of Spirits, releasing whatever hinders or retards their Motions: And all this too is done without Disturbance of the Humours, without Fluxes and Pains, without furfeiting the Body, without the Risque of Diseases, without the Expence of Time, or Loss or Neglect of better and nobler Employments. Notwithstanding, it must be allowed, that Exercise, when moderately and opportunely used, and discreetly chosen, is very advantageous, and to many necessary.

Yet ordinarily, to such as are eminent for their Temperance and Sobriety, whose learned Professions engage them the more closely to profecute their Studies, and who at the same Time take much Delight in them; to such, I say, there is no absolute Occasion for long-continued Exercises; whereby not only much Time, but also too much of the Spirits themselves are wasted. More gentle and less violent Actions will sometimes serve their Turn as well. It is enough, if, only for the Space of a Quarter or Half an Hour, or so, they exercise themselves by either ringing a Dumb-Bell, or by playing at Shuttle-

D 2

Cock,

Cock, or Billiards, or by strongly working their Arms backward and forward with Weights, which some have for that Purpose; and so fwinging and shaking them in their Hands. Or it may be done with a Cane, or Flesh-Brush, rubbing it strongly over the whole Machine. And these are Exercises, which many grave and worthy Men do use (and that without the least feeming Indecency) in their Retirements. And there is no other, that I know of, that doth more effectually stir all the Muscles of the Body and Limbs, nor more rid the Joints of adhefive, flimy Humours, and render them more pliant and strong, than the before-mentioned Exercifes. There are indeed several other falutary Actions, which might be reckoned; fuch as riding on Horseback, or in a Coach, or walking for the Air, or playing at Bowls, and the like; which serve at the same Time to amuse and divert the Mind, and quicken the Imagination: But after all, how beneficial foever in themselves these, or any other Acts may be towards Health and Long Life, still let it be remembered, that without Abstinence and Sobriety, that is, unless Men do, and are resolutely determined constantly to follow the uncorrupted Dictates of Nature, Reason, and Religion, all the Art, Exercise, or Physic in the World, whether jointly or feparately made use of, will stand them but in very little stead: Wherefore, to be short, the best, safest, and most effectual Means of obtaining this End, will be to follow the Advice of the Poet:

Know, without Fasting Physic can cure none; But * Fasting will cure almost all, alone.

CHAP. VI.

Two other Advantages it brings to the Body.

A Second Advantage a frugal and simple Diet affords the Body is this; namely, ga c.

A faber Diet a good Defence a-gainst outward Cau es.

that, besides its Prevention of bodily Diseases, bred through Crudities and the internal Corruption of Humours, it doth also arm and fortify against outward Causes and Accidents: For those, whose Bodies are untainted, and in a manner free from Viscidity and Groffness in the Fluids, are not so susceptible of the Injuries of the Winds or Weather, nor yet so liable to receive any Hurt or Impression from immoderate Heats and Colds, Actions or Labours, as other Men are, who abound in foreign and noxious Mixtures, from the sensual and inordinate Gratifications of their Appetites and Defires: And, if at any Time they perceive themselves to be attacked by any of these or the like Inconveniencies, still, as it is generally remarked, their Cure is much more eafily and speedily effected. The same Thing too is verified in external Accidents, such as in Wounds, Contufions, Diflocations, Fractures, and the like Violences; in respect that there

^{*} The Poet here does not mean absolute Fasting, for that would be even prejudicial to Health; but Abstinence, or a greater Degree of Temperance.

is very little, or no Flux of morbific Matter falling on the Part affected. Now the Flow of acrimonious Humours (as is obvious to every Man of common Sense) is a fore Hindrance, or grand Enemy, to the Cure of any Wounds whatsoever; and not only so, but is the Cause of much Pain and Inflammation, and often of an high Fever: In Confirmation whereof we have a very remarkable Instance in the History of the Life of Cornaro; wherein we are informed, that, as he was one Day riding in his Chariot for the Air, he had the Misfortune to be overturned in it, and to be dragged by the Fury of the Horses several Yards; whereby one of his Legs and Arms were broken, and his Body and Head also bruised in a very terrible Manner; that, being taken up speechless, he was immediately conveyed home; but that, before the Phylicians and Surgeons (being fent for) could come, he recovered his Senses and Speech a little, so as to be able to make them rational Answers. Upon their nice Examination and narrow Inspection of his torn and tortured Carcase, they unanimously judged him irrecoverable, but at a venture agreed to his being let blood, and purged, in order to prevent, if possible, the Fluxion of Humours, Inflammation, and Fever, fo much feared and expected: But Cornaro, reflecting on his wonted Abstemiousness and Regularity of Life for fo many Years together, whereby his Blood and Juices, as he thought, could not but be tolerably found and clean, rejected their Advice, and complied only in having his Limbs fet, and his Body anointed with some proper Fomentation.

Fomentation. Thus relying (as was his usual Custom) on Nature as his sole Physician, and Temperance as his only Physic, he miraculously recovered in a short Time, though at the Age of Seventy. Farthermore, a sober Diet is a good Defence against all Manner of Insection; for its Venom is certainly never more forcibly resisted, than when the Human Machine is undefiled with Impurities and Corruptions. Socrates himself is an Instance in this Case, who, as Laertius writeth, by his Temperance and Frugality happily escaped the Plague, which so vehemently reigned at Athens, and greatly wasted that noble City, the Place of his Abode.

A third Commodity a spare and Its Mitigalow Diet communicates, is, that, tion of incuranotwithstanding it is inessessual in ble Diseases.

notwithstanding it is ineffectual in the Cure of fuch Distempers as are incurable in their own Natures, still it never fails to mitigate and relieve them, and, besides, of giving the Patient more frequent Intervals of Ease, and the Possession of his Mind and Faculties, how short soever it may fall of obtaining a final, uninterrupted Truce. This daily Experience proves; for there are some Persons, who, being far advanced in Age, have not fufficient Time remaining for a perfect Cure of a Disease; and others, in whom the Difease is so deeply rooted, by a bad Constitution derived to them from their Parents, that they are not capable of a total Cure: And yet, by a proper Form of some low, nutritive Diet or other, have I known each of these to prolong their Lives a great while, and to be

^{*} Libro 2. de vitis philosophorum.

in a manner always chearful, and apt for the Performance of intellectual Occupations: Whereas, on the contrary, others equally as distempered have I feen, who by an injudicious Choice of ill Living have exasperated their Complaints, violently afflicted Nature, and at last overset her quite. Thus it is evident, I think, that it is partly in our own Breasts to lengthen out our Days, tho' labouring under the most confirmed or habitual Indisposition, by a partial or palliative Cure; and at the same Time in some Meafure to become serviceable to ourselves, or Mankind, in our mental, if not bodily Capacities: But withall let it be remembered, that this Privilege, if I may be allowed the Expression, is no otherwise to be obtained, than by a constant and regular Course of Life and Diet.

CHAP. VII.

That it procures long Life, and causes Men to live and die with less Pain and less Horror.

A Fourth Advantage arising to the Body from a low and meagre Diet is, that it is an Instrument not only of Health, but of Long-Life to its Followers; and, besides, infallibly procures a Man a more gentle and easy Passage into another State, when by the Course of Nature he comes to die. These Things are manifest both in Reason and Experience. As for Old Age, it is evident from History, that holy Men, in Deserts and Monasteries, of old, lived to an extreme Age, notwithstanding their Austerity of Life, and Scarcity of bodily Conveniencies.

niencies. Which Thing, in my humble Opinion, chiefly is to be attributed to the prevailing Power of a temperate Life or Diet. Paul, the first Hermit, prolonged his Life to almost 115 Years: An Hundred of them were spent in the Defert, sustaining himself the first 40 of them with nothing but a few Dates, and mere Element; and the Remainder with only half a Loaf of Bread, which, as his Historian informs us, was his only daily Allowance ever after. Athanasius also testifies, that St. Anthony lived 105 Years on Bread and Water, adding only a few Herbs at last: And Numbers besides, by the very same Course of admirable Abstinence, have arrived at Ages almost as great and greater. Witness Paphnutius, who exceeded 90 Years; St. Hilarian 84, although originally of a weak and tender Constitution. James, the Hermit, a Persian born, lived 104 Years; and Arsenius, Tutor to the Emperor Arcadius, and Romauldus an Italian, to 120 each. Udalricus, a Paduan Bishop, a Man of wonderful Abstinence, faw 105; Epiphanius, almost 115; Simeon Stylites, 109; St. Hierom, 100; St. Remigius, 74 in his Bishoprick; and Venerable Bede, near 100. It would be needless, as well as tedious, enumerating all the Examples that might be brought from Histories, and the Lives of the Saints, to confirm the Truth and Certainty of all this. I omit very many in our Days, who, by means of a plain and simple Diet, have extended their Lives with perfect Health unto 80, 90, and 95 Years and upwards: And we have some at the Age of 60 and 70 among us, even now, who for their D 5 Activity 25%

Activity and Vigour can hardly be ranked

among the Aged.

Nor can it be thought, that these Persons, just before recited, lived so exceeding long by the fupernatural Gift of God, and not by the Power of Nature; inafmuch as this Length of Days was not the Premium of some few, but of very many, and almost of all those who pursued that precise Course of Sobriety, and were not cut off by any outward Accident, or Violence: Wherefore St. John, who alone among the Apostles escaped violent Death, lived 68 Years after the Ascension of our Lord; so that in all probability he arrived to the Age of an Hundred Years. St. Simeon was 120 Years old when he suffered Martyrdom. St. Dennis the Areopagite lived till he was above 100 Years old; and St. James the Younger saw 96, having continually attended Prayer and Fasting, and always abstaining from Flesh and Wine.

Nor doth this Privilege belong only to Saints, but to others also. Witness the * Brachmans among the Indians, who live to a very great Age by the like Courses of Moderation; as also among the Turks do the religious Professors of their Mahometan Superstition, who are very much addicted to Abstinence and Austerity of Life: And fosephus, in his 2d Book and 7th Chapter of the Wars of the Fews, writes, that the † Essense were Men of long Lives; sew or none dying under a hundred Years, by reason of

^{*} Heathen Priefts.

[†] A Sect of Monastick Philosophers among the Jews, who referred all to Destiny, held the Mortality of the Soul, &c.

the Simplicity of their Diet, and regular Life.

Democritus and Hippocrates prolonged their

Lives to 105 Years. Plato exceeded 80.

Lastly, when Scripture saith, He that is temperate adds to his Life, Ecclus. xxxvii. it speaks generally of all those that follow Abstinence, and not of Saints alone. Never- Homicides and theless I grant, indeed, that Blasphemers do wicked Men, and in particular, not live long. Homicides and Blasphemers, do not for the generality live out half their Days, let them be ever fo temperate in their Diet, or Manner of living; because to those Persons God himself is averse, and sooner or later suffers his Vengeance to overtake and destroy them in their Iniquities and Absurdities: Yet still it may be remarked, that those very People fall not by Means of any inward Malignity of Body, but through some external more fatal Judgment, which the too frequently incensed Deity at last thinks fit to let loose upon them. In like Neither the Manner those, who are studi- Lufful. oully addicted to Lust, cannot but be short-lived; because there is no one

Thing more exhaustive of the Spirits and bodily Juices, than Lust is, nor indeed serves sooner, and more effectually, to weaken and

fubvert the very Foundation of Nature.

But it may perhaps be objected by the Adversaries of Sobriety, (for surely none else will presume to start the same Objection) that there are Instances of Persons in the World, that have arrived at a good Old Age, without the Benefit or Assistance of this low and sober

Diet we have been treating of; nay, of Perfons, who in a manner, during the whole Course of their Lives, have been prone to lewd and fenfual Gratifications, and almost perpetually rioting and wallowing in Luxury. But, alas! how few are there of these Sort of Examples in the World, in comparison of those poor Souls who have died Martyrs to their Wantonness and Debaucheries! How few, I say again, in Respect and Comparison of those who have taken contrary, wifer Courfes; Courfes, guided by the Dictates of Nature, Reason, and Religion! It is certain from Experience, that Gluttons or intemperate Feeders die before their natural Time: But in case a Man should chance to be of so uncommon and strong a Constitution, (which is the Case of few) as not to receive any Hurt or Impression from his repeated Excesses, nor almost from any thing, save from Time or Age itself; still what Encouragement can there be, except a little fenfual Delight, for him to continue his Course of Intemperance and Irregularity? or rather, what not, to perfuade him to break off fo pernicious and fatal a Course and Custom? If a Man finds himself to be almost of an original Constitution of Brass, (and of such must that Person needs be, I think, which Luxury cannot wear) I fay, if Luxury can hardly ftorm or weaken the human Fabrick, how strongly will Nature and Temperance preserve it! What more glorious Opportunities will a Man have for the Improvement of his learned Professions, and of instructing and benefiting Mankind? And, what is more material still befides

fides the Esteem and Admiration of the World, how happily will he contract the Love and Approbation of God himself, and the sure Expectation of those Rewards of Sobriety promised in the Gospel! Besides, these Lovers of Pleafure more than Lovers of God, allowing they should chance to live to a great Age, are, in the main, miserable and unhappy. Exercise and Physic are their constant Application; and this, as the Poet expresses it, is to die, for Fear of dying. In respect of their Understanding, they live but a short Time, its Light being soon extinguished: The Care of their bodily Health ingroffes too much of their precious Time, to spare it for better Purposes; which is, in fact, to make the Soul become the Servant of the Flesh, that is, a Slave to its own Vassal. Such a Life fuits but badly with Man's Nature, much more so with a State of Christianity; whose Good and Happiness is altogether spiritual, and is not to be otherwise purchased than by Acts of Mortification and Self-denial, and the Employment and Exercises both of Mind and Body.

Add to all this, that those Persons, who are originally of weak and tender Natures, if so be they live soberly, are much more secure, in respect of their Health and Life, than those of the soundest Constitution, otherwise intemperate: For the former of these are sensible, that there can be no soul or impure Mixtures in their Blood and Juices; at least, so very little, as must be insufficient for the Product of Diseases: But the latter Sort, (your Bon-Vivants) after some few Years, must of Necessity perceive their Bodies to

abound with vicious Moistures, or acrimonious Humours, which, gradually putrefying, at last burst out into very terrible Symptoms and Disorders. Aristotle in his Problems testifies, that there was in his Time a certain Philosopher, Herodicus by Name, who, altho'he was thought and judged by almost every body to be of a very weakly Complexion, and funk into a deep Confumption, nevertheless, by the Art The dialinhung, lived till he was an hundred Years old. Plato also makes mention of the same Man in his 3d Book de Rep. Galen in his 2d Book de Marasmo, as also in that of his Preservation of Health, reports that there was a certain Philosopher too in his Time, who had undertook in some of his Writings to lay down certain Rules and Maxims, in order to instruct Men how they might preserve themfelves free from Old Age. Galen indeed doth worthily deride this, as an huge Piece of Vanity and Folly: Yet still the Philosopher's own Example was a manifest Argument, that his Art was not altogether vain neither, but very available toward the lengthening out of the short Span of Human Life; for, when he was at the Age of Fourscore, he, as himself informs us, laboured under fuch a Wasting or Decay of Body, as hardly rendered him any thing differing from a mere Skeleton; yet by his Art, and the fingular Moderation and Temper of his Diet, he was fo far instrumental to the prolonging of his own Life, that he died not till after many Years lingering in a gentle Consumption. And the fame Galen in another Place fays, * " That, by

^{*} Arte illa quæ diætam præscribit, eos qui ab ipso ortu imbecillum

"means of that Part of Physic which pre"fcribes a proper Diet, those, who have de"rived too tender and weakly a Constitution
"from their Parents, have brought themselves
"on to extreme Old Age, without any Weak"ness, or Diminution of their Senses, free from
"all Pain and Diseases." He also adds afterwards concerning himself, "Even I, though I had
"not an healthy Constitution from my Birth,
"nor led a Life of much Freedom and Ease of
"Mind, yet by the Precepts of this most useful
"Part of Physic, which I practised after the
"28th Year of my Age, I never fell into any
"Distemper, except a slight Fever of 24 Hours
through Weariness, or Excess of Labour."

Nor do the Lovers and Followers of Temperance only It brings quiet come to extreme Old Age without fuch a sensible Feeling of the Pains and Miseries incident thereunto; but, when their very Departure is at hand, it is sure to be attended with less Struggle, Grief, and Horror; inasmuch as the Bond, wherewith their Soul and Body are united, is unloosed, not by any mighty Violence used to Nature, but by a Kind of simple Resolution and Consumption of their radical Hu-

becillum corpus non funt fortiti, sensibus illæsis et ab omni morbo et dolore alienos, ad summam senectutem pervenire. Deinde addit de seipso: Ego vero tametsi nec salubrem corporis statum ab ipso ortu sim nactus, nec vitam planè liberam egerim, hac tamen ipsa arte usus, post 28 ætatis annum, ne minimo quidem laboravi morbo, nisi sortè diaria sebri ob lassitudinem aliquando contracta. L. 5. de Tuenda Sanitate.

mour: And it fares with them as with a Lamp, that, when the Oil is spent, calmly and peaceably

expires of itself: For, as a burning Lamp may be three Ways extinguished; first, by outward Violence, as when it is blown out; secondly, by its being drowned, as when there is too great a Measure of Oil poured in it; and thirdly, by the Waste and Spending of the Oil itself; so

Man's Life compared to a Lamp. likewise the Life of Man (which in Truth resembles much the Nature of a Lamp) may be ex-

tinguished three several Ways too; as, first, by external Force, whether of the Sword, or Fire, or Strangling, or the like Accidents; fecondly, through the Abundance of evil Humours, or their malignant Quality, whereby the radical Humour by Length of Time is oppressed and overthrown; and, thirdly and lastly, when the radical Humour itself in Tract of Time is totally confumed by the natural Heat, and blown into the Air, which is done much after the same Manner as boiling Oil or Water is wasted by the Heat of the Fire. Now, in the first and second Kinds of Death, there is certainly a very great Struggle and Encounter of the whole animal Oeconomy; and fo of confequence much Pain and Grief must needs ensue, as long as that continues, in respect that the Temper is overset by the Violence of its irresistible Contrarieties, and the Bond of Nature forcibly broken: But, in the third Kind, there is either little or none at all of this Scuffle and Combuftion of Nature, in regard that the Temper is internally and gradually dissolved, and the original Humidity, in which Life principally confifts, is confumed together with the in-bred Heat: For

For, whilst the Humidity or Moisture of the Body keeps on wasting, so does its Heat equally abate too; and as foon as its Humidity is once quite gone, or dried up, does its Heat also jointly extinguish along with it, just the same as a Lamp, or Taper, goes out for want of Fuel. And thus calmly and quietly does almost every sober Perfon, that is not fnatched away by any untimely Mischance, make his Exit out of this World: For, to fuch as have constantly and punctually observed a temperate Regimen of Diet, it is impossible any the like Commotion should arise, by reason there are no evil Humours received or retained long enough in the Habit to produce them and their fatal Consequents; and therefore it cannot but follow of course, that every Perfon must live till the original Humidity and in-bred Heat be so far consumed, as that they are not fufficient to retain the Soul any longer in the dark Prison of the Body: And in like Manner would a Man's Exit or Departure be, should the Divine Goodness think fit to deprive him of his Preservation of the native Heat, although the radical Humour should continue; or, on the contrary, if the radical Humour itself should, by the Command of an Almighty Power, be in an Instant destroyed.

The fifth Advantage of a sober Diet is, that it renders the Body lightsome and agile, fresh and expedite to all the Motions

It makes the Body agile and expedite for all Employments.

and Services belonging to it; for Heaviness, Oppression of Nature, and Dulness, do all proceed from the Abundance of Humours which do obstruct obstruct the Passages of the animal Spirits, and clog and stiffen the Joints, by filling them too full of sizey, or gluey Moistures: So that, the Excess or Redundancy of sharp Humours being removed by means of Diet, the Cause or Effect of all that Heaviness, Sloth, and Dulness, doth entirely cease, and the Spirits themselves become free and active. And, moreover, by the very same Means it comes to pass that the Concoction is rendered perfect, or complete; and so good Blood is produced, out of which a kindly Flow of pure, unmingled Spirits is perpetually issuing, wherein all the Vigour and Agility of the Body do principally and originally consist.

CHAP. VIII.

That it maintains the Senses vigorous and entire.

The Commodities of the Mind by Sobriety.

Aving produced, and difcoursed of five Commodities, which Sobriety affords the Body; I shall in the next

Place endeavour to lay before you the Advantages the Soul also reaps from the same Cause: And these too I shall reduce to five more.

The first is, that a plain Diet administers an almost constant so the Senses.

Soundness and sprightly Vigour to the outward Senses: For the Sense of Seeing is chiefly eclipsed in aged Persons by reason of the optic Nerves being cloyed with superstuous Humours and Vapours; whereby it happens, that the animal Spirits, which serve to the Sight,

are either darkened, or not afforded in such Abundance as is needful or necessary for the quick and clear Discernment of outward Objects. Now this Evil or Impediment is often to be removed, or at least may very much be mitigated, by a temperate Diet, prudently abstaining from whatever serves to replenish the Head with Fumes and Vapours: Such are too fat or oily Substances; over strong, or spirituous Liquors; too delicious, or high-seasoned Foods of all Sorts, especially Ragoos and Olios, and the like foreign Provocatives, compounded of Ingredients as pernicious to the Mind, as such

unnatural Meats are to the Body.

The Sense of Hearing is likewise obstructed by the Fluxion of crude and superfluous Humours proceeding from the Brain, and descending into the Organ of Hearing, or into the Nerve thereunto subservient: And this is the Cause of a Man's growing deaf, or thick of Hearing (as it is often expressed) in that Part where the Humour falls. Now this Flux is to be prevented the very same Way, viz. by a Life of Temperance and Sobriety. It is true, a physical Regimen may be proper, and of infinite Service, in this as well as in many other Cases where the Difease has not already taken too deep Root: But yet, how powerful foever that alone may be towards a Cure, it must be allowed, that it will do its Work much more speedily and effectually when joined with Abstinence.

The Sense of Tasting is chiefly vitiated by evilHumours that infectits Organ: As, supposing

choleric, tart, or faline Humours to possess the Tongue and Throat, (whether it be that they descend from the Head, or ascend from out of the Stomach, whose inward Tunicle is continued with these Organs) every thing will then go down bitter, tart, or faltish. And even this Indisposition may be rectified by a low and simple Diet; whereby it is also farther brought about, that the most coarse and ordinary Food is more palatable and agreeable to a fober Man's Tafte, and affords him treble the Ease, and Pleasure, and Advantage, than can possibly accrue from the richest and most delicious Provisions a racked Invention can contrive, to those who are addicted to Voluptuousness and Gluttony; for the evil Juices, that did infect the Stomach and the Organ of the Taste, and which created a Loathing and Inappetency, being dispersed and quite expelled, the Appetite returneth of itself, and the pure Relish and natural Sweetness in Meats are then recovered and fenfibly felt.

The other two Sensations, viz. Smelling and Touching, are in like manner preserved by Means of the same most useful Part of Physic:

I acknowledge indeed nevertheless, that the Vigour and Sprightliness of the Senses, especially of the Eyes and Ears, are in some much abated, and in others almost extinct by Time or Age itself, in regard that the Temperature of the Organs is by little and little dissolved, the radical Humour and native Heat being gradually consumed and dried up: Whereupon the Constitution becomes more dry than is proportionable to the Operations of the Senses, and all the Passages and

and Pores are clogged and stopped up with cold Phlegm; which of all Things else is certainly the most contrary to the Functions of the intellectual Faculties; for, as old Men, by the inward Temper of their Bodies, grow very dry and very cold, so likewise do they become full of Moisture, because of excrementitious Humours: So that, in short, Old Age is nothing else but a cold, dry Temper, proceeding from the Consumption of the radical Humour and inbred Heat, whereunto there must necessarily be conjoined an Abundance of cold Phlegm, diffused throughout the whole Habit.

CHAP. IX.

Its Mitigation of the Passions and Affections.

HE fecond Commodity, which a fober Diet communicates to the Soul, is, that it has a very great and happy Influence on the Affections and Paffions of Men, especially on those of Anger and Melancholy; effectually moderating their inordinate and excessive Violence: It also works the same most agreeable Effects on those other Affections, which are conversant about the Taste and Touch of delectable Things: So that even in this Regard it deservedly merits our utmost Esteem and Veneration; for how shameful and abominable a Thing is it, not to be able to suppress or fubdue Choler; to be obnoxious to Melancholy, and cruel Cares of the Fancy; to be enthralled to Gluttony; to be a Slave to the Belly; and to be continually hungering and thirsting af-

ter Wantonness and Debauchery! Nor is it only highly shameful, and contrary to Virtue and Goodness, to be thus miserably disposed, but very pernicious also in regard of a Man'sown Health, and full of Scandal and Difgrace in the Eyes of good Men. But Sobriety eafily remedies all these Evils, partly by subtracting, and partly by correcting, the bodily Humours, which are the Causes of them. And that these Humours are the efficient Cause of such Passions, is, and ever was, the received Opinion of all Physicians and Philosophers, both ancient and modern; and, besides, is what is manifest by Experience; for we may almost daily observe those, who abound in choleric Humours, to be very angry and rash; and those again, subject to Melancholy, to be continually possessed with Grief and Fear: And if these Humours be kindled, or fet on fire, in the Brain, they produce Phrenfies and Madness; if an acid Humour replenish the Tunicles of the Stomach, it creates a continual Hunger and Ravening; and in case there be a Store of inflammatory or boiling Blood in the Veins, it continually incites and stirs up Lust, more especially if it be accompanied with any flatulent or windy Matter: And the Reason is, because the Affections of the Mind follow (as is well known in Philosophy) the Apprehension of the Fancy. Now the Apprehension of the Fancy is conformable to the Disposition of the Body, and to the Humours therein predominant: And hence comes it to pass, that Men are presented in their Dreams with various Illusions, or Spectres, either more or less agreeable, or more or less

less terrifying and amazing. Thus some, who are choleric, are chiefly affected in their Sleep with the imaginary Appearances of either Fire or Burnings, Wars or Slaughters: Others, of more melancholy Dispositions, are often disturbed with the dismal Prospect of either Funerals, or Sepulchres, or some dark and doleful Apparitions: The Phlegmatic dream more frequently of Rains, Lakes, Rivers, Inundations, Drownings, Shipwrecks; and the Sanguine abound in different Kinds of Pleasantries, such as Flyings, Courfes, Banquets, Songs, and amorous Sports. Now Dreams are nothing else but the Apprehension of the Fancy, when the Senses are asleep: Whereupon it follows, that as in Sleep, fo likewise in Waking, the Fancy for the most part apprehends Things agreeable to the Humour and Quality then prevalent; and especially upon the first Approach or Presentment of the Object, till it be corrected and otherwise directed by Reason. So then the Excess of these Humours perverteth the natural State and Apprehension of the Fancy: For Choler, inasmuch as it is extreme bitter, and contrary to Nature, causeth a Man to pass the most ill-natured Constructions on other People's Words or Actions, and to conceive every thing displeasing or disfatisfactory to his perverse and peevish Temper, as though it were intended, or actually levelled at his own Person with the utmost Malice and Revenge: And because this Humour is fiery and impetuous, it makes the Apprehension so, and prompts a Man to a speedy Retort, and Revenge of the frequently-mistaken Injury, or evil Treatment.

The melancholic Humour is Treatment. heavy, cold, and dry; lumpish and sour; swarth in Colour, and very hurtful to the Heart: And thus it makes the Fancy to apprehend all Things as having Enmity; bringing Sorrow and Sadness, and full of Darkness. Now, by reason of the Coldness and Heaviness therein, it comes to pass, that this Humour doth not incite or urge a Person to the precipitate Repulse of Evil, as Choler doth, which is light and active: But, on the contrary, it casts a Man into panic Fears and Terrors, Flights and Delays. Phlegmis cold and moist; whereby it is brought about, that the Apprehension is slow and dull to every thing, without any Vigour, Acrimony, Alacrity: So that Choler makes a Man angry and rash; hasty, bold, and confident; earnest and contentious; peevish and revengeful; clamorous and loud; blasphemous and profane: And hence arise so many Injuries and Fightings, Wounds and Slaughters; as are daily tragedized among Mankind: For even those Mischiess consequent upon Drunkenness, generally proceed from the Fury of Choler fet on fire and augmented by Wine. Melancholy makes Men fad, pufillanimous, timorous, folitary, penfive, and inclining to Despair: And as Choler, while it ferments and rages, doth for some Time pervert the right Judgment of the Mind; fo Melancholy perverts it almostalways, especially if it be that Kind which feizes upon the Brain, or emits noxious Vapours from the hypocondriac Parts into the Head and Heart. Phlegm makes Men flow, feeble, and drowly; fearful and forgetful; and, in fine, unqualified

unqualified for the proper Discharge, or due Performance of any momentous Undertakings: For, notwithstanding this Humour is less prejudicial to the Constitutions of Men than either Choler or Melancholy, it is nevertheless exceeding contrary to the Functions of the Mind; because by its Coldness it dulls the mental Vigour, and by its Moistness doth cloy the Brain, and re-

tard the free Motions of the Spirits.

But even all these calamitous Evils are remediable by a good and convenient Form of Diet; and, if faithfully continued, it will in Time abate and correct those gross Humours which are the Origin of all, Nature, if left alone, will often perform the Work effectually of herself; but she will hardly ever miscarry, if timely applied to, when backed and affifted by a judicious Choice and Administration of proper Medicines. She will be perpetually either confuming, or driving them out of the Habit, and thereby wonderfully purify the whole Temper of the Body, and resupply it with a fresh Mixture of sound Blood and fweet Juices, and carefully preferve it from relapsing for the future into the same Crudities and Maladies. This is the happy Fruit of a fober Course of Life and Diet. Who then, that is now ready to fink under the heavy and intolerable Evils of Lewdness and Sensuality, will still persist in his Irregularities and his Miferies, rather than, by a timely and generous Retreat, recover his former Health and Ease, his temporal and eternal Advantages? The Confequences of Sobriety are so amiable, as well as profitable in themselves, that it is a Wonder to me,

me, how a Man can help being captivated with its attracting Beauties, and agreeable Qualities. What Calmness of Mind, what Affability, what modest and generous Deportment, what Chearfulness, what Tractableness, and prudent Moderation, are all its Followers Possessors of? The benign Juice or Nourishment, which Nature works upon, occasions benign Affections and Manners: And the malignant Juice (fuch as Choler and Melancholy breed, if they exceed in any hurtful Quantity or Quality) produces a kind of Savageness and Cruelty in the Affections and Manners: Wherein it is also worthy Confideration, that evil Humours not only excite and ftir up the Passions, and first give them Rise or Motion; but again, by a certain Kind of Sympathy, are themselves also kindled, and inflamed, and heightened by the Paffions: And by reason of their being thus strengthened and elevated, they add new Force and Energy to the Passions, augmenting and confirming them. This is evident in the choleric Humour, which, when abundant, stirs up Wrath, and an irrevocable Refentment of Indignation, through the Apprehension of the Fancy, which it hath poisoned or corrupted: And, on the other hand, the Commotion of Anger, by a certain peculiar Sympathy that is between them, inflames the Spirits, and choleric Humour; and then again the choleric Humour, being rendered fiery and impetuous, causeth the Fancy to conceive the Matter more strongly and vehemently; fo that the Injury feems to be redoubled to what it was. Thus the Commotion of Anger itself is mightily increased

increased and fortified: And, what is worse still, it often happens, that Mens Anger do even terminate in Madness, if so be the Fancy be constantly occupied, or the Imagination be suffered to dwell too long on the supposed or real Injury. It is therefore furely the wholesomest Advice that can be taken, for a Man to endeavour, all he is able, to compose and reconcile his ruffled Temper, and to banish all malicious and revengeful Thoughts from his Heart, forgiving both the Transgression and Transgressor; fince Malice and a fettled Hatred are certainly very pernicious, not only to the Mind, but also to the Body. In like Manner the melancholic Humour, by means of the Fancy, exciteth Grief, although in fact there be no true or folid Foundation for it: And Grief thus fet at Work by a certain Kind of Sympathy straitens the Heart, and obstructs its free Dilatation; whereby the melancholic Humour becomes adust, and more malignant; in regard that the dark and gloomy Fumes are pent up in the Brain, and cannot be dispersed: And thus, by reason of its greater Malignity, it amplifies the Affection of Grief and Sorrow, and frequently driveth on to Despair, and to the most fatal Resolves.

CHAP. X.

Its Preservation of the Memory.

HE third Commodity arising to the Soul from a sober Diet, is the Soundness of the Memory: For the Memory, above all Things E 2 clse,

else, suffers most from a cold Humour possessing the Brain, which the Aged and Intemperate are more frequently troubled with, and obnoxious to. This Humour both stuffs up the narrow Passages of the Spirits, and damps the very Spirits themselves, rendering them sluggish: So that the Apprehensions of the Mind become thereby flow and languid, inconstant and irregular, and often make a Man lose himself, his Reason, and his Argument in Disputation. And the Cause of all this is threefold: First, by reafon of the animal Spirits, which the Fancy makes use of, as well in Remembrance, as in all her other Actions, being, as it were, fuddenly intercepted, or retarded in their Course, by the phlegmatic Humour; upon the immediate Interception whereof ceafeth the Apprehension, and confequently all Remembrance. Secondly, it is brought about, in respect that the Apprehension was weak and feeble, and without Reflection, and that by reason of the Poverty and Unaptness of the Spirits. Now the Apprehenfion of any thing made without Reflection, is incapable of leaving behind any fuch Print or Impression of itself, as is sufficient for Remembrance; fince all Remembrance is immediately conversant about our own Actions, and only mediately about the Objects of those Actions: For I do not properly remember that Peter was dead, but that I saw, or heard, or read, that he was dead: So that, where there is no Reflection on our own Actions, there cannot be a sufficient Print left for Memory. The third Cause is the Unaptness of the Spirits themselves: For, notwithstanding

withstanding the Print or Footstep be in some Measure sufficient in respect of itself, still it often falls out, that through the Poverty or Impurity, Inactivity or immoderate Heat of the Spirits, we are disabled from making any convenient Use, or tolerable Advantage, of that very Impression. And by this Means it sometimes happens, that a Man almost quite loseth his Memory, and forgetteth all his Learning; as when Abundance of cold Phlegm stops up the narrow Passages of the Brain, and causes the Spirits themselves to become resty and unwilling, and doth over much moisten and cool the very Substance of the Brain itself.

Now towards either the Prevention or total Cure of all this Evil, or Inconvenience, little else is required, than fome prudent Caution or Care in the right Government of our Diet, viz. Abstinence from strong and sharp Wines, which ferve only to inflame the animal Juices, and to fill the Head with acrid and noxious Fumes. I do not earneftly contend altogether for a total Abstinence of spirituous Liquors, (though Water is certainly the only universal Menstruum, and most fitting Diluter of all Bodies proper for Food) but for a moderate and prudent Use of them: For, altho'Wine is hot, yet when drank in Abundance, and unfeafonably, it occasions cold Difeases, viz. Distillations and Coughs, Rheums, Apoplexies, Palfies, and the like: And the Reason is, because it conveys to the Brain a Stock of foul Vapours, which, being there refrigerated, are condensed into that cold Phlegm, which is the Source and Origin of all these Evils.

E 3

Nor is it only requifite, that a Man abstain from heady and fumy Drinks, but also from all Abundance of moist Things; and, as far as he is conveniently able, betake himself to a dry Kind of Diet. And this will be a Means either to prevent a superfluous Humidity on the Brain, or, if already possessing it, to consume and disperse it, by removing the feveral Obstructions confequent thereupon, viz. by unlocking the Pafsages of the Spirits; by rarefying and exalting the very Spirits themselves; by bringing them to their right or proper Quality; by reducing the Brain itself to its natural State and Temper; and, lastly, by causing it to become, together with the Spirits, readily and fitly subservient to the Functions of the Fancy and Memory.

CHAP. XI.

Of its Service and Benefit to the Wit and Understanding.

the Understanding, in the several Operations of Thinking, Reasoning, Inventing, and Judging, and the Aptitude or Fitness it retains for the Reception of Divine Illuminations. And hence comes it to pass, that Persons given to Abstinence are watchful, circumspect, provident, able in Counsel, and sound in Judgment: And, in the Application of any Sort of Learning, it is observable, that their Progress is wonderfully expeditious, and that they quickly and easily arrive at an eminent Proficiency in their Studies.

Studies. The Duties of Prayer, Meditation, and Contemplation, is to them an Office of wonderful Facility, and Pleasure, and spiritual Delight, in the Performance. The ancient Fathers and Hermits of old undeniably prove this by their own Example, who, being most abstemious, always preserved their Minds fresh and clear, spending whole Nights in Fasting and Prayer, and in the strict Search and diligent Study of Heavenly Objects: And all this too was done with such Rapture and Extasy of Soul, that they deemed themselves rather in a State of Paradise, and counted the Motions of Time itfelf too swift for their Spiritual Exercises, and even grudged the Interruption of those few Minutes the Calls of Nature demanded for the Sustenance of their Bodies. Such a Course of Life wasit, that gained them so great a Measure of Holiness, and Familiarity with God himself; and was the fole Cause of their being adorned with excellent Gifts of Prophecy and Miracles, and of their being standing Monuments of Admiration to the whole World: For, having their Minds and Hearts constantly lifted up, and firmly fixed on God above, his Majesty vouchsafed to descend unto, and wonderfully to illuminate them: For (as the Royal Psalmist expresses it) They had an Eye unto him, and were lightened, Psalm xxxiv. making them Partakers of his Secrets, and Instruments of his miraculous Works; that so the World might know, and be thoroughly convinced, how agreeable and acceptable their Manner of Life was in the Sight of God, and be provoked to a generous Emula-E 4 tion and Imitation of them.

And not even the present Age is altogether without Instances and Examples of this Kind; who by their ardent Piety and prudent Abstinence have foared to the highest Pitch of Wisdom and Virtue, and contracted an universal Esteem and Admiration through the Abundance of their Works, and excellent Learning. But no Man is capable of performing the like Excellencies without the Affistance of Sobriety; and, if he obstinately attempt it, he shall be sure to kill himself long before his Time. No Man, living without the necessary Help of this Virtue, is able to refrain his Passions and Appetites; to possess his Mind in quiet; to go about, and to be able to manage as he ought, the necesfary Duties and Functions of his Heavenly Calling; nor with Ease and Pleasure to get acquainted with the Mysteries of Godliness; nor, in fine, to attain to any eminent Degree of Holiness: For, as Cassian teaches, Sobriety is the very Ground and Basis of all: And even the Saints themselves, who have endeavoured to rear the lofty Tower of Evangelical Perfection, have taken their Rise from this Virtue, as from the Foundation of their spiritual Fabrick.

Nor is it any thing foreign to what hath been already delivered, that Faith ought to be held the Foundation of all Virtues, and consequently the Ground-work of all this spiritual Building; inassemuch as Faith is the internal and primary Foundation, in which all other Virtues centre, and are fixed, and whereupon they are reared: But Abstinence is an outward, secondary, and ministerial Foundation; in regard that it effectually

tually removes and banishes every Obstruction, that is an Impediment to the Exercises of Faith, or an Enemy to the Operations of the intellectual Faculties, or either ferves to render them the more difficult, tirefome, or unpleasant. And, besides all this, it affords many useful Aids, whereby the fuperior Functions become more clear and bright, as well as more vigorous, active, and transporting: For all spiritual Progress doth depend on the Use of the Understanding, and of Faith, which eminently resides in the Understanding: For it is impossible we can have a true Value, or a fincere Love, for any thing that is good or virtuous, or be averse to what is evil or wicked, and to continue to grow in the Difesteem and Hatred thereof, except the Understanding first propose it to the Thoughts, and move the Affections; whereupon he, who is fo disposed by Heavenly Grace, as that Heaven and Heavenly Matters are always in his Mind, (as it was in the Apostles, and many other Apostolical Men) will eafily be wrought upon to contemn the gaudy Splendors of Sublunary Enjoyments; and so by Degrees, from a great Measure of Holiness obtained here below, will be qualified (let that happy Change come when it will) for the Reception and Enjoyment of a glorious Crown of Blifs, and Immortality in Heaven: For the Will is easily conformable to the Judgment of the Understanding, when Matters are propounded by the Understanding, not, as it were, by Starts, but constantly and seriously. From hence it is manifest, that those Things, which hinder the Functions of the Mind, or tend to E 5

their greater Obscurity, Difficulty, and Irksomeness, are the Things which in fact debar us from the Attainment of any eminent Degree of Perfection, either in Learning, the Exercises of Religion, or Sanctity of Life: And, on the contrary, those Things which make the Functions of the Mind to become more easy and vigorous, clear and delightful, are the very Things which sit and prepare a Man for the proper Office and Discharge of spiritual Duties, and at the same Time conduct him to a more speedy Acquisition of superior Wisdom, and exemplary Holiness.

Since then Sobriety is endowed with this Virtue, that it prevents, or removes far from us, whatever is disagreeable, or prejudicial to the Consideration of the Mind, and supplies us with those Things whereby it becomes easy and pleasant to us, it justly deserves the Appellation of a Secondary Foundation of Wisdom and spiritual Progress. Now how this is brought to pass, is evident, I think, from what hath been already discoursed of before: For the Evils, which obstruct Speculation, and make it tedious, are these that follow; namely, too much Moisture of the Brain; too great a Stock of Vapours, and noxious Exhalations; Obstructions of the Passages of the Brain; the Heat of the Spirits themselves, arising either from Blood, or Choler; the Ascent of choleric Vapours, and those that proceed from adust Melancholy, into the Head; choleric and melancholic Humours, infecting or possessing the Brain itself. Now all these very mischievous Impediments, if not already in act, are easily kept off, and at a Distance, by a sober Course of Diet:

Diet: Or, if they are already crept into the Habit, still Sobriety and Abstinence, with the Asfistance of some well-chosen Medicines, skilfully applied, will by Degrees often lessen and totally consume the Disease, in case the Malady is not grown inveterate; as it now and then happens, that there is produced a continual Madness, as when Melancholy and Phlegm have got the joint Possession of the Brain. Nor doth Sobriety only take away the Lets of Speculation, but doth also minister proper and convenient Helps to further and exalt it; to wit, good Blood, and consequently pure and unmingled Spirits; and in the Brain begets a right and found Difposition: For the very Temperament of the Brain itself, which by Intemperance is made either too moist or too cold, or too dry or too hot, is by little and little rectified, through an orderly Diet, and reduced to its due or proper Mediocrity.

This Fruit of Temperance A Benefit this therefore justly claims, and of the greatest ought to attract, our greatest Moment and Con-

Esteem and Admiration: For what can a Christian more desire, than after Old Age to enjoy his Mind sound and healthful, chearful, expedite, and vigorous to all the Employments and Functions thereof? For, besides that it is very pleasant in its own Nature, it carries along with it a very great and spiritual Advantage: For from long Experience of sore-past Age the Vanity and Emptiness of the World is the better discerned, and becomes daily the more insipid: Heaven and Heavenly Things then begin to be entertained with a better Taste and much sweeter Relish, and every thing here E 6

below to be looked upon only with an Eye of Contempt and Indifference, as Trifles unworthy our Concern. Those everlasting future Things, impendent over us, are constantly before our Eyes, and call upon us to make fitting Preparation for them. All the Knowledge and Experience, which we have gained from our Youth up until that Time, turn to our very great Account, and we reap the bleffed and comfortable Effects of them. The Affections and Perturbations of our Minds being calmed, we can then with true spiritual Joy give due Attendance on God and Religion; always exercifing ourselves either in fearching the Scriptures, or in reading Treatifes of Divinity, or in devoutly and reverently performing the constantly necessary and public Duties of our Church. And it is hardly credible, what an Aptness and Facility there is in a fober Old Age to all these holy Duties and devout Employments of the Soul; and how exquifite is the Pleafure and Confolation, which it constantly administers even in this Life, befides the fure Expectation of a Reward of infinite Bliss and Glory in the Life to come.

This was really what was the principal Motive of my taking Pen in Hand, and inditing this Treatife; namely, that all Heavenly-minded Christians, especially those more immediately set apart for God's Honour and Service, might be thereby the more readily induced to embrace and ever to lay hold on so incomparable a Good as this is; a Virtue, able to preserve a sound Mind in a sound Body, and to add Length of Days to the short Span of human Life; a Virtue, capable

capable of raising, and begetting in Men a more ardent Zeal, forward and chearful Disposition for God and Goodness; a Virtue, alone sufficient to qualify their Souls for the Reception and Entertainment of the Holy Spirit of God, and productive of the fruitful Works of Righteoufnefs. A long Life is but of little Worth and trifling Advantage, if employed altogether in the Service of the World, and not of God, being given to Covetousness, or Ambition, or vain Pleasures: But, in case God and Religion be suffered to ingross almostall our Thoughts, and all our Care, and we make Virtue the chief and ultimate End of all our Actions and Defigns; then fuch a Life indeed, extended to the utmost Length of Mortality, will undoubtedly be ever infinitely valuable and serviceable both to a Man's felf and to Mankind in general: Wherefore, notwithstanding Sobriety hath that Virtue that it will preferve all Men in general (and not only the religious and pious Souls) healthy in Body, and found and vigorous in their Intellectuals, yet the Profecution thereof feems more properly and directly to belong to those who are more zealous in the Cause of God, and to make the strongest Efforts towards his Divine Excellencies and Perfections; in regard that it will be to them, not only a perpetual Spring of Confolation in this Life, but an endless Source of uninterrupted, inconceivable, and inviolable Delights in the Life Eternal.

CHAP. XII.

Its Allay of the Heat, or Fury of Luft.

THE fifth Advantage of a spare and coarse Diet, is its Mitigation of the Violence of Lust, and surprising Efficacy in subduing carnal Temptations, and reconciling the Differences and Disorders, and substituting in their Stead a perfect Tranquillity both of the Flesh and of the Spirit. The Poet's Observation is certainly very just, * Sine Cerere et Baccho friget Venus. And this Remedy against so fatal an Evil, all, who have risen to any eminent Degree of Christian Perfection, have ever made use of with happy Success. And indeed, fetting aside omnipotent Grace, there is nothing fo efficacious as this is: For Sobriety doth take away not only the Matter itfelf, but the impulsive and exciting Causes of Lust. The Matter of Lust I call the Abundance of Seed; the impulsive Cause, the Store of Animal Spirits, whereby the Seed is expelled; and by the exciting Cause, I mean the Imagination of lustful Matters. Now this Imagination first stirs up the Concupiscence, and that immediately moves the Spirits to the Expulsion; and upontheir being thus rarefied, they quickly do their Business, unless the Will obstinately refuse its Consent, or powerfully restrain them from it. Now on the entire Conquest of this Passion does the Christian's Combatchiesly depend, especially

^{*} Without fresh Fuel, (viz. good Eating and Drinking) the Fire of Lust will soon expire of itself.

in those that are in the very Flower of their Age,

and in the Strength of vigorous Nature.

Now Sobriety doth abate of the Matter and impulsive Cause: For it gradually diminishes both its seminal Heat and Quantity, lessens much of the Stock, and quells the burning Rage of the Spirits, by abstaining from such Foods as are most nourishing to the Body, and from such Liquors as serve only to inflame the Blood and Juices. And when once the Seed is corrected as to its Quality and Quantity, and the Spirits themfelves become calm and regular; luftful and unchafte Imaginations will then cease of their own Accord: Or in case they do arise, still they are the more eafily affuaged, except it so happen, that they are continued (by God's Permission) through the wicked Suggestions of the Tempter: For luftful Imaginations do spring up in the Mind, through a certain Kind of Sympathy they have with the Disposition of the Body, viz. by reason of the Abundance of Seed and Spirits; as all other Imaginations do, which follow the natural Bent and Condition of the predominant Humour. In Confirmation whereof we may daily observe, that sober and discreet Livers are seldomer haunted with the like indecent Imaginations, and unhallowed Temptations; and, besides, are less violently affaulted with them. Now, in case there is little or no Store of these dangerous Effects already treasured up in the Habit, Sobriety then doth easily obstruct their Growth: For a Man, that follows warily its Precepts and Injunctions, will be taught not to eat and drink more than Nature warrants, and to measure the Quantity

Quantity of those Victuals, he should take, not by his Appetite, which is altogether deceitful, but by right Reason, which respects the Agreeableness and sit Proportion of them for the bodily Health, and labours too, all it is able, effectually to restrain him from an Excess of whatever tends in the least to interfere with, or prejudice the Duties and Operations of his Intellectuals.

Why the Appetite is a deceitful Measurer in this Kind, is, because the Ap-

petite doth crave not only what is absolutely necessary for the Support of the Body, but also what may serve for the Use of Procreation: For the Appetite of Eating and Drinking, as well in the animal as brutal Creation, is ordained to both these Ends, viz. to the Preservation of the Individual, and to the Propagation of the whole Species. And therefore Reason commandeth all those that would live virtuously and chastely, and avoid the uneasy Sting of Lust, to obey their Appetites not to the Full, but only to indulge them to the Half; that is to fay, she bids Men to be cautious, that no more be swallowed down, than may prudently administer to the Recruit and Maintenance of the Body: And this wife Charge and prudent Direction of Reason, if faithfully observed, will not only put an entire Stop to any Over-proportion of Seed, but also very much check the Number of those Enticements, which accompany the Spirit of Fornication and Uncleanness: For Seed is bred of that Superfluity of Nourishment, that is more than requisite for the Refreshment of the Body: So that where there

there is no more Sustenance taken in, than Nature can safely dispense with, then certainly nothing, or very little, can remain for the Distribution and Increase of Seed.

The other Cause, why the Appetite is deceitful, is, because its Longing is extended farther, than is proportionable to any of the aforefaid Ends; that is to fay, to a greater Degree than is requisite either for the Support of the Body, or for the Matter of Propagation: And this is either occasioned through some faulty or evil Dispofition of Stomach, as it sometimes happens in that ravening Kind of Appetite, called * Bulimia; or else by reason of the elaborate and ingenious Cooking of the Food itself; which by its luscious Variety, and exquisite Relish, tends not only to rouse a fickly Appetite to receive the unnatural Load, but at the same Time to render a natural good one incapable of knowing when it has enough. Since then it is fo, how careful especially ought the Followers of Sobriety and Chastity to be, in eschewing this most delicate and nice Profusion of living! Nor indeed does it less concern every Person, who values nothing more than his prefent Health, and Ease of Body, to decline the frequent Opportunities of delicious Feafting: For as they will only ferve to provoke Excess, so, as Celsus observes, Variety of Foods, though they may go down with greater Easeand Pleasure, yet they are not so easily digested.

^{*} An Ox-like Hunger, or insatiable Appetite, a Disease often accompanied with a Loss of Spirits, which proceeds from a too sharp Ferment or Working in the Stomach.

By all which it plainly appears, that there is nothing so effectual in subduing the Passion of Lust, as Sobriety and Abstinence; to whose Virtue and Efficacy no corporal Mortifications whatsoever can pretend. The most painful Labours, or Chastisements of the Body, viz. the Discipline of Hair-Cloths, or Scourgings, or Lyings on the Ground, or any other Severities, and Cruelties of the Flesh, can contribute but very little towards a total Cure. These bodily Exercises strike not at the very Root of the Diseafe, but only raze, as it were, the Skin, and outwardly inflict a little transitory Smart: But Abstinence penetrateth deeply, and fixeth the Axe at the very Bottom of the Evil, and, if obstinately perfisted in, will fairly extirpate it from the Habit, and reduce its Temper to a just Mediocrity. And this is the very Remedy I would gladly prescribe to all those that are tormentedwith, or labour under, the like vexatious and restless Maladies of the Flesh.

And thus far touching the fingular Benefits and Advantages of a Life of Sobriety. It were easy enough to produce numerous Testimonies of the holy and ancient Fathers, in full Confirmation of all that has been asserted; but for Brevity's sake I omit them, contenting myself with the Quotation only of a single Passage out of St. Chrysostom, who, in his first Homily concerning Fasting, writeth thus: * "Fasting is,

^{*} Jejunium Angelorum imitatio est pro nostra virili, contemptus præsentium, schola precum, alimonia animæ, siænum oris, mitigatio concupiscentiæ: mollit surorem, compescit iram, sedat sluctus naturæ, excitat rationem, claram reddit mantem, alleviat carnem, sugat nocturnas sæditates, capitis do-

as much as lies in us, an Imitation of the " Angels, a Contempt of Things present, a " School of Prayer, the Nourishment of the " Soul, the Bridle of the Mouth, and the Abate-" ment of Concupiscence. It mollifies Rage, " appealeth Anger, calms the Tempelts of Na-" ture, excites Reason, clears the Understand-" ing, exonerates the Flesh, chaseth away noc-" turnal Pollutions, banishes uneasy Pains of the " Head, and begets chearful and well-coloured " Countenances. By it a Man gets Composed-" ness and Sweetness of Behaviour, Fluency of " Tongue, right Apprehension, and the like." See him likewise in his first Homily on Genesis; and agreeable to this, we read of many Things in St. Basil, and in St. Cyprian, in their Orations concerning Fasting; in St. Ambrose, in his Book of Elias, and Fasting; and in many others.

CHAP. XIII.

That a sober Diet is no very troublesome or grievous Business; and that Intemperance is the Source of many and very great Maladies.

I might as well have said Numbers, in the World, who are ready enough to oppose and deny this Assertion, by alledging, that there is more Difficulty and Uneasiness, in such a Regimen of Diet, than the Thing is worth; and that a Man is thereby almost perpetually worried out of his Life by an unsatisfied, or a lingering Aplores tollit, claros adsert et colores et aspectus. Jejunis gestus compositi, expedita lingua, recta cogitatio, &c. Chrys. de Jejunio.

of Opinion, that it were better to die sooner, than to prolong a wretched Life by so severe a Remedy; accordingly as it was once expressed by a certain distempered Person, whose Thigh was to be amputated, * Non est tanto digna dolore salus.

In answer to this Objection, I don't deny indeed, but what it may cost a Man some Pains or Trouble at first, just as every Change and every new Accident will do, in regard of the oppolite Custom formerly, as also in regard of the Extension of the Capacities of receiving. But then let it be considered, that Custom will subdue Custom, and that the so much imagined Difficulty will by Degrees lessen upon our Hands, and grow infenfibly the more light and easy: For our Method must be (as Hippocrates teacheth) every Day to subtract a little from our ordinary Meals, till we arrive at a just Proportion in them. And by this Means will the Expansion of the Stomach be contracted without any Violence or much Trouble; and that reftless Craving or Hankering after more, which was formerly fo troublesome to us, will then happily vanish: And when once the Stomach becomes contracted as it ought, a sober Diet will create us no manner of Trouble at all; but on the contrary, our smaller Portions of Food will sit more easy upon us, and do us treble the Service, than when we had voracious Appetites to gratify, and eat more frequent and larger Meals, and drank more plentifully, as exactly corresponding

^{*} Health would be too dearly purchased at the Expence of so much Pain or Torture.

fides

with the Strength and Capacities of our new contracted Stomachs. To confirm this, we may obferve how disagreeable, nay, prejudicial, sumptuous, or even ordinary, orany Suppersatall, are to some People: How difficult at first to disfuade them from them, and how loth themselves to quit them for their own future Interest. And we may observe again, what mighty Benefits those very Persons have acknowledged to have received from fuch a Compliance at last; and how unwilling (afterhaving once experienced the Sweets of fuch a Denial) to refume fo pernicious a Custom: And after that Menhave had Courage and Refolution enough to force themselves for some Time to a Recantation of their Luxury, they find no Vexation in forbearing their Provisions, their greedy Appetites fo strongly and vehemently contended for before: And therefore it is altogether untrue, what is commonly objected, that a thin and spare Diet doth torment a Man with impatient Appetites, or infatiable Defires.

Secondly, Ianswer, That supposing there were a little extraordinary Trouble or Inconvenience in such a kind of Diet, and that it should be of long Continuance, (which at the same Time is to suppose a Falsity) yet should we reflect on the infinite Advantages such a Life of Sobriety affords, in Recompence of these our Pains and Labours, viz. that a sober Diet expels Diseases, preserves the Body vigorous and sound, chaste and uncorrupt; that it procures Length of Days, and produces quiet and agreeable Sleep, and renders the most ordinary Fare equal in Sweetness to the greatest and most delicate Varieties; and, be-

sides all this, that it maintains the Senses free and clear, and the Memory fresh; ministers Sagacity to the Wit, and qualifies a Man for the more apt or ready Attainment of Divine Illuminations. And its Benefits stop not here neither; for it serves also effectually to calm and subdue our unruly Passions, to banish Wrath and Melancholy, and to quell and extinguish the Fury of a burning Lust. In a word, it conveys both to the Soul and Body Advantages inexpressible and innumerable: So that it highly deserves to be stilled the Parent of Health, of Chearfulness, of Wisdom, and, in sum, of all Virtues.

On the contrary, Intemperance The evil Confequents of Intem- is possessed of as many frightful and bad Qualities; for an innumerable Train of Mischies accompany her Irregularities. That small and fading Pleasure Delicacies afford the Palate, as foon as they are once lodged in the Stomach, is fucceeded by many Disorders, sufficient, one should think, to deter the stoutest Hero from a Repetition of the like Excesses: For how is the Belly oppressed with its unnatural Load, and the most confirmed Health shaken and broken, and ruined by it! What a Mass of Corruption and Putrefaction does it convey to the whole animal Oeconomy! How does it inflame Lust, and betray the Mind to the most furious and brutal Passions! What an Havock does it make among the Senses! How does it weaken the Memory, and befot and hinder the Actions of the Understanding! And, in fine, how lifeless and unactive does the Mind thereby become for superior or nobler Employments!

ments! And thus what a fatal Stop must all these Evils put to the Progress of either Learning or Religion, or to the Exercise or Performance of

good Works in general!

And, prithee, what a goodly Benefit is it, for the Satisfaction and Enjoyment whereof we fustain fuch an inestimable Loss, and inexpressible Damage? Nothing but a momentary Delight of the Throat, which we can be no longer sensible of, than whilst the Meat is in chewing, and going down into the Belly; a Delight, in its own Nature highly base and contemptible, as differing nothing from that of brute Animals; and fuch a one too, as doth affect but a very small Portion of ourselves, to wit, the Tongue, the Palate, and the Throat. This is the sole Cause of our drawing down upon ourfelves fuch terrible and fatal Consequences; and through the Defire of this it is, that the Profecution of Temperance appears so laborious and unwelcomea Task; for, were there no Pleasure in Eating and Drinking, there would be no Grief, no Reluctancy, in forbearing them. Intemperance then is nothing else, nothing more or better, than a base and momentary Pleasure, or fordid Gratification of the Sense of Tasting: And, as this is the Case, into what a Depth of Misery and Indignity must that Man needs plunge himfelf, who is an almost constant or perpetual Slave to that very Pleasure, and merely for the Sake of which alone he runs the Risk of so many Inconveniencies and Prejudices! What an intolerable Mixture of nauseous Bitterness doth Gluttony pour in, after the trifling, transient, and hardly perceptible Pleasure, which it hath afforded! Thefe

These are the Consequences which justly challenge the most serious Attention and Confideration of every Man of Sense, especially of Divines, and of those more immediately set apart for God's Honour and Service; whose only Profession it is to attend continually upon Divine Mysteries and mental Exercises: For, in case we ponder or ruminate as we ought on these Things, it is not possible but that we should make choice of, and be enamoured with, the Beauties and Excellencies of Sobriety, and find a real and fubstantial Pleasure and Satisfaction in the Practice of it: And, on the contrary, Intemperance will appear to us, as she is, a Monster, full of Horror, Sin and Detestation. We shall then be ashamed of our Delicacies, and blush at the base and feeble Tempers of our Minds, that are fo captivated to Voluptuousness and Sensuality, that we fervilely obey the tyrannical Rule or Power of it, not being able to refift its most sottish, tranfient, and unprofitable Allurements. What can be more vile, or more indecent, for a Man, especially for one that professes Christianity, than to be a Slave to his Belly? And what greater Madness, than to renounce and quit our Interest in all those excellent Benefits which accompany Sobriety, for the fake of gratifying a sweet Tooth, or a brutal Itch; and to expose ourselves to the Mercy or Lash of all those dreadful Evils or Calamities of Soul and Body, wherewith Intemperance fcourgeth her zealous and devoted Followers? Oh! the wretched Condition of Man, who is obnoxious to fo great Vanity, obscured with

HEALTH and LONG LIFE.

with so much Darkness, and encompassed with so many Errors; whose Mind is deluded in his Judgment and Choice by a vain Appearance of delectable Good, as it useth to be in Dreams,

or in Visions of Sleep!

And thus much shall suffice of this my Discourse concerning Sobriety, as it is the sovereign Means and Instrument of the Preservation of corporal Health, and mental Vigour, in and unto extreme Old Age, and as it is a Procurer of whatever is most dear, precious, and excellent, both to the Soul and Body of Man, yielding an Abundance of the choicest of Blessings, as well spiritual as temporal, to every sincere, steady, and strict Observer of it.

It is the most earnest Desire and fervent Prayer of my Soul to God, that the Maxims and Admonitions here given may tend to the Edification of many: And I will conclude in the Words of the Apostle, exhorting all Men to Sobriety, I Pet. v. Be sober, be vigilant : Because your Adversary the Devil, as a roaring Lion, walketh about, feeking whom he may devour: Whom resist, stedfast in the Faith. For Sobriety is not only available for the fubduing of the Temptations of the Flesh, to which the major Part of the Creation are exposed; but absolutely so for all other too, and is helpful to every Kind of Virtue; as is, I think, fufficiently manifest from what hath been already proved in the foregoing Pages.

The END.

SERVINE PROPERTY OF A STATE OF A

SPECTATOR, Vol. III. No. 195.

"HE most remarkable Instance of the Efficacy of Temperance towards the " procuring of Long Life, is what we meet " with in a little Book published by Lewis Cor-" naro, the Venetian; which I the rather men-"tion, because it is of undoubted Credit, as "the late Venetian Embassador, who was of " the same Family, attested more than once in " Conversation, when he resided in England. " Cornaro, who was the Author of the little "Treatife I am mentioning, was of an infirm " Constitution, till about Forty; when, by ob-" stinately persisting in an exact Course of "Temperance, he recovered a perfect State of " Health; infomuch, that at Fourscore he " published his Book. He lived to give a "Third or Fourth Edition of it; and after " having passed his Hundredth Year, died " without Pain or Agony, and like one who " falls asleep. The Treatise I mention, has 66 been taken notice of by several eminent " Authors, and is written with such a Spirit of " Chearfulneis, Religion, and good Sense, as " are the natural Concomitants of Temperance " and Sobriety. The Mixture of the old Man " in it is rather a Recommendation than a 66 Discredit to it."

A

TREATISE

OF THE

Benefits of a Sober Life.

The Force, or Truth, that the Prevalency of Cuf-

Habits of Men do grow into their very Natures, and lay them under a Kind of Necessity of practising those Virtues, or those Vices, to which they have been once habituated. Nay, it is too frequently the Case, that Custom obtains a far greater Ascendant over the Minds of Men, than even Reason itself. This is experimentally true: For how often is it seen, that a Man of the strictest Honesty, by often intermingling himself with loose and wicked Company, imbibes their poisonous Principles,

and thereby forfeits his own Innocence and Integrity! If so be indeed he should be so lucky as to abandon such lewd Company, and to fall into amore religious Converse of Men, Honesty and Goodness will then flourish again, and he become equally as wise and just as he was before he deviated from the Paths of Virtue. In a word, all the Variations in the general Behaviour of Mankind proceed (as far as I have been able to observe in Life) from little else, but from the Force or Prevalency of Custom.

Two dangerous Evils introduced in Italy by Cuftem. I am perfuaded, it is Custom alone, which has not long since introduced two very pernicious Evils in *Italy*. The one is Flat-

tery and Court-like Formalities; the other, Gluttony, or an immoderate Eating and Drink-The former of these deprives civil Society of all Honesty, Freedom, and Sincerity; whilst the latter (against which I am determined to employ my Pen) robs the Body of its Health and Vigour. It is indeed an Unhappiness that attends the Rich and Powerful, that frequent and delicious Feasting is fashionable, and therefore ferves as a Plea for Extravagance: And, although Men at the same Time are thoroughly sensible, that Frugality is as much the Refult of Temperance, as Prodigality is of Intemperance; yet so unaccountable is the Folly and Madness of Men, that they prefer the latter to the former, and look upon Profuseness as an Act of Liberality and true Honour; while Thriftiness and good Husbandry pass in the Eyes of the World for Avarice and Meanness of Spirit. Now all

this apparent Difference in the Oeconomy of Life is entirely the Consequence of Custom and Habit, which has fo far deluded and intoxicated the Minds of Men, that they first chuse to embrace an irregular and luxurious Way of Liing (whereby the Miseries and Infirmities of Old Age are insensibly contracted, before they can be able to taste the Pleasures of Youth) rather than to pursue a Course of Sobriety and Moderation, which would as infallibly ward off all those Maladies and Disorders, and render not only Youth, but even Old Age itself, pleasant, chearful, and vigorous. This is so true, that when Men lived less delicately, their Health and Vigour were greater, or more perfect, at Fourfcore, than our Libertines even now enjoy at Forty.

O wretched, miserable Italy!

The Prodigality

Dost not thou plainly see, that of Banquets.

Gluttony deprives thee of more

Souls yearly, than either a War, or the Plague itself, could have done? Thy true Scourges are thy continual Banquets, which are so intolerably extravagant and profuse, that there are not Tables large enough to contain the infinite Number of Dishes Luxury provides, without piling them one above another. What Frenzy, what unheard-of Extravagance, is this! Prithee confider, how highly displeasing thy Ways are in the Sight of God, and letadue Sense of his avenging Justice put an immediate Stop to thy dangerous Career. Strive, ere it be too late, to get rid of this Sin of Gluttony; a Distemper, though fatal in itself, yet it may easily be prevented by a well-regulated, or an orderly Diet. It

It requires no great Pains or Skill to avoid the Evils which Excess may occasion, no more than it does to discover a sovereign Remedy against Repletion; since Nature herself, who is the best Physician, has wisely taught us it. will be prudent and right not to allow her more than she requires, neither to overcharge her, fince a very Trifle will fuffice to fatisfy the Calls. of Hunger and Thirst. The Maxims of Temperance are derived from those of solid and substantial Reason. Let us learn therefore to eat no more than may prudently administer to the Recruit and Maintenance of the Body: Whatsoever exceeds this Measure is of fatal Confequence, and lays a Foundation for Infirmities. and Death itself, nay, perhaps eternal Death too. And what Pleasure can be thought safe or innocent, in the Enjoyment whereof we run the Risk of losing (besides many temporal Advantages) our precious and immortal Souls? How many Friends, of a promifing Genius and lively Disposition, have I myself seen hurried off the Stage of Life, in the very Sunshine of their Days, by this Plague of Intemperance! who, if they had lived, might have been shining Ornaments to the World, and an inexpressible Comfort and Satisfaction to their Relatives and Acquaintance. It is to prevent this Infection therefore, that I have now undertaken to shew, in this small Treatise, that Intemperance is no fuch Evil, but what it may eafily be remedied by refolving to live foberly: And I have the more readily taken it upon me, in regard several young Men of excellent Qualities,

lities, for whom I have a great Value, have by their joint Intreaties engaged me to it; who, perceiving their Parents to drop off in the Meridian of Life, and me, upwards of Fourscore, healthy and strong, became very defirous of being acquainted with my Manner of Living: Wherefore, to fatisfy their honest Defires, and at the same Time to become as useful and serviceable to others as I can, I will openly declare the Motives that first induced me to relinquish Intemperance and live soberly; and then lay down the Means I used, as well as the Benefits I reaped by so doing; and shew lastly, that a regular Course of Life is not at all impracticable, but very advantageous, and abfolutely necessary to be embraced and pursued by all Men.

I say then, that the Infirmities of my Constitution, which were not only sown, but deeply rooted in the Habit, first mo-

The Reafons why Cornato himfelf embraced a fober Life.

ved me to renounce that Intemperance, whereunto I had for so many Years, to my Cost and Sorrow, been addicted. My repeated Excesses had reduced me so very low, that I was not capable of supporting myself any longer under them. Various Diseases were the Product of my Irregularities. I was often afflicted with violent Pains of the Stomach; and sometimes a Pleurify, and a slight Fit of the Gout seized me. Besides all this, I was hardly ever free from a Fever, and an excessive Drought. Such was my unhappy Disposition, that I could not entertain the most distant Prospect of a Recovery,

F 5

nor of ever being perfectly freed from those Miseries I had indiscreetly brought upon myfelf, by any other Means, than by waiting patiently the expected Calls of Death itself. this miserable Condition did I remain from the 35th to the 40th Year of my Age, having tried all Remedies in vain, to the great Surprise of almost every body. The Physicians themselves, being by this Time quite wearied out with the ill Success of their Skill, were plain in telling me, that there was but one Remedy left, which I must either constantly and resolutely make use of, or unavoidably submit to impendent Fate; and that was a fober and an orderly Life. This they admonished me to pursue to the End of my Days; affuring me, that, as Intemperance was the sole Cause of my unhappy Disorders, so it was its contrary Virtue, that was most likely to filence my Complaints, and restore me to my primitive Soundness of Constitution. This put me upon reflecting, how efficacious a temperate Regimen of Diet had already been to Numbers originally of weak Complexions; and, on the contrary, how far Irregularity had been a Means of reducing the most naturally found and flourishing Constitutions to the lowest Ebb of Weakness and Misery. Upon balancing their wide Difference, my Reason soon convinced me, that, if any thing would effect my Recovery, or even a Mitigation of my Troubles, it must be accomplished by putting in Practice the Advice of my Physicians: For it is certain, contrary Causes will produce contrary Effects and Operations; and it is often feen, that the Faults

of

Faults of Nature are corrected by Art, in like Manner as barren and unfruitful Fields are made fertile by the Skill and Industry of the Hufbandman. The Physicians farther added, that Delays were dangerous, and, unless I speedily put in Execution my Resolutions of living soberly for the future, I must remain incurable, and inevitably perish within a few Months. This made so deep an Impression upon me, that what with the Thoughts of living in Pain and Misery, and of dying within so short a Time, I was instantly determined, animated with the Hopes of avoiding Pain and Death, to betake myself in good earnest to a sober Course of Diet.

The Doctors now began to be mightily pleafed with my Intentions, and instructed me in what Method I was to proceed. They injoined me to manage myself like a sick Person, by eating and drinking nothing but what was wholesome, and that in small Quantities. This Advice they had given me some time ago; but till now I was so imprudent as to slight it. I soon grew tired of their Prescriptions, and fell again to the Gratification of my sensual Appetite, as usual; and often perceiving myself scorched with internal Heat, I fell to the Drinking of Wines in Abundance. I used also to take a secret Pleasure (as some weak, filly People do, though I would not be thought to justify my Conduct in this Particular) of putting a Trick upon my Physicians, in neglecting to obey their Rules, though at the same Time I imposed the greater Cheat upon myself. But, as soon as I had resolved to follow the uncorrupted Dictates

F 6

of Nature and Reason, and sound it was no difficult Matter, but the bounden Duty and proper Interest of every rational Creature so to act; I so closely pursued this Course of Life, that I never after ventured to step out of the right Way. Upon this I sound I began to amend daily, and within a Twelvemonth, though it may seem incredible, I was persectly

cured of all my Infirmities.

This happy and furprifing Recovery made me reflect a little on the Usefulness, as well as Efficacy, of a temperate Regimen, and reason thus with myself: If Sobriety had so much Power as to restore me to Health, how capable must it be of preserving me from relapsing into the fame Maladies and Disorders! Resting fully fatisfied from my own Experience of the Certainty of it, I grew careful in providing fuch Food as was proper for me. I was resolved to try whether those Things, which pleased my Appetite, were really prejudicial or not to my Health; and whether that proverbial Aphorifm, wherewith Gluttons are wont to defend themselves, viz. That which savours is good and nourisheth, be consonant to Truth and Reafon. Upon Trial I found it otherwise: For heady Wines, raw Fruits, Salads, falt Meats, Saufages, and the like, notwithstanding they were once very grateful to my Palate, yet proved very pernicious to my Constitution. Hereupon, trusting more to my own Experience than to the Falfity of the Proverb, I generously declined all these noxious Things, and made choice of those Victuals only, which best

best suited my Constitution; and moreover took special Care never to rise from Table but with an Appetite to eat more upon Occasion, always bearing in Mind the Truth of Hippocrates's Aphorism, * Se non satiare cibis, studium est

Sanitatis.

Thus, after I had renounced Intemperance, and taken up a better Course of Life, I was refolutely bent upon continuing it to my Life's End. And O happy for me! that I had Courage and Resolution enough to attempt it: For this Change not only freed me from those Maladies and Evils, which without it were incurable, but fecured me from falling again into that annual and often violent Disease, to which I wasobnoxious all the Time I was a Slave to my Sense and Appetite. And these Blessings and Advantages still continue to accompany me, because, from the very Hour I was made whole, I never fwerved from my fettled Course of Temperance and Sobriety. No corrupt Humours, no Pains affect me now, neither have ever fince I became a fworn Enemy to Sin and Senfuality.

To this my approved Regimen of Diet, I found it necessary to subjoin a few particular Cautions, viz. to avoid as much as possible extreme Heats and Colds, violent Fatigues, late Hours, and an Excess even of lawful and conjugal Embraces. I was ever very nice also in the Choice of Air, and took all imaginable Care to screen myself from the Inclemency of the Winds and Weather, and from the excess

^{*} Whoever eats or drinks too much will be fick.

five or parching Heat of the Sun: For, although the Quantity and Quality of our Food ought principally and primarily to be considered, as being most conducive to Health; yet the forenamed Precautions have a greater Influence on our Constitutions, than most People are aware of. I was no less careful not to give way toangry Resentments, and melancholy Reslections, and to stifle every Degree of Passion, which in the least tended to disturb my Peace of Mind, or (as I thought, if indulged) might have injured my bodily Constitution. I don't pretend to fay, that I had always fo absolute a Command over my Reason, as never to lapse into any of these Disorders; but thus much I can boast, that this was rarely my Case: And the strict Watch I observed over my Appetite (which indeed ought to be every one's chief Business and Concern) prevented those bad Consequences, which might otherwise perhaps have enfued from my feldom and petty Irregularities.

This Galen himself confirms, when he says, that all other Excesses, to wit, immoderate Heats and Colds, sharp Winds, excessive Labour, or Action, and the like, made no lasting Impression on his Constitution, because in his Diet he was ever moderate. He tells us, that these Inconveniences seldom or never affected him at all; and when they did, that the Indisposition thereby occasioned was but slight, and certain to pass off within a Day or two at farthest. This Belief, without citing any more Authorities, is sufficiently and more abundantly confirmed by my own Experience, as many, who

are of my Acquaintance, can testify. It is certain, that the Passions have less Influence, and create less Disturbance to some, who live sparingly, than to others, who lay no manner of Restraint at all upon their boundless Appetites and Desires. Sometimes it so fell out, that I could not possibly avoid being exposed to the Extremes of Heat and Cold; neither was I always able to play the Philosopher so dexterously, as to furmount every perplexing Obstacle and Difficulty which came in my Way: Yet all these Trials worked me no considerable Hurt to my Constitution: And I have seen others, that have been addicted to Voluptuousness and Gluttony, fink under a less Weight of Troubles and Afflictions, than those I met with. It happened one Time, that my Brother and some of my Relations, perceiving certain powerful and litigious Persons commencing a considerable Law-suit against me, and fearing lest I should be worsted in the Cause, fell into a deep Melancholy, (a Case usual to dissolute Lives) which grew upon them to fuch a violent Degree, that they shortly died on the Account: But I (whom that Affair ought principally to have affected, as it most nearly concerned me) courageously withstood the Shock, and received no Hurt. The Loss or Disreputation I sustained, was, I thought, fufficiently compensated by the Pleasure and Satisfaction I reaped from braving the insolent and unjust Malice of my potent Adversaries, and from the secure Triumph I gained over my Difficulties and Misfortunes: Whence I infer, that the Passions are less furious

rious in Bodies free from any malignant Qualities, than in Bodies abounding with them.

When I was Seventy Years of Age, I had another Proof of the Usefulness of my Regimen. As I was one Day riding in my Chariot for the Air, the Horses, taking Fright, ran away with and overset it: By which Accident I dislocated a Leg and an Arm, broke my Head, and bruifed myself very much. In this deplorable Condition was I taken out, and immediately conveyed home. The Physicians and Surgeons were fent for, and at their first View were at a Nonplus how to act, and judged me irrecoverable. However at a Venture they agreed, that the Surgeons should breathe a Vein, and administer some evacuating Medicines, in order (as they faid) to prevent, if possible, the Fluxion of Humours, Inflammation, and Fever, so much feared and expected. But I, reflecting on the regular Course of Life I had led for so many Years together, whereby my Blood and Juices, as I thought, could not but be tolerably found and clean, rejected their Advice, and only ordered the Diflocation of my Arm and Leg to be reduced, and my Body to be sufficiently rubbed with some proper Fomentation. And thus, without any more Remedies, or farther Advice, I foon recovered, to the no less Surprise of the Physicians themselves, than of all that knew me. Whence I conclude, that a fober Diet is an excellent Defence against outward Causes and Accidents; and that Irregularity is productive of quite contrary Effects. But

But my own Experience hath taught me another Thing too; that, where the Rules of Diet have been punctually and long observed, it is of dangerous

The Danger of violating the Rules of a first and long observed Regimen.

Consequence to transgress them. About four Years fince, (viz. in the 78th Year of my Age) I was advised and pressed upon very hard by my Physicians, and several of my Acquaintance, to take a little more Nourishment than what of late I had been accustomed to. Various Reasons they urged in behalf of it; as, that Old Age could not be well supported with so little Food; that I ought to eat not only to support Nature, but even to increase the Strength and Vigour of it; and that I must either inevitably fink under my present Regimen, or take their Counsel and augment my Diet. To this I replied, that Nature was content with little; that, as I had been long accustomed to so small a Measure, Custom was now become a second Nature to me; that it was but agreeable to right Reafon, the farther I advanced in Years, and the faster my Nature decayed, that my Stint of Meat and Drink should be rather diminished than augmented: And, to add still a greater Force to what I had faid, I made use of two Italian Proverbs: One was, * He that eats little, eats much; because by eating sparingly a Man prolongs his Life: The other was, + The Food which is left after a Meal, does more Service than what hath been already eaten; by

^{*} Qui multum vult comedere, comedat parum.

[†] Plus juvat cibus qui superest comedenti, quam qui ab illo comestus.

which is intimated, that the Hurt or Prejudice of too much Food is greater than the very Benefit of it taken in a moderate Quantity. But even all this could not prevail upon them; and therefore, to avoid friendly Teazing and the Character of Obstinacy, I condescended to their Importunities. Now my usual Measure, in Bread, Soops, Yolks of Eggs, and Meat, was twelve Ounces exactly weighed, which I increased to fourteen Ounces; and the Portion of my Drink, which before was fourteen Ounces per Diem, I now made fixteen. This very Addition, as small as it was, caused such a surprising Alteration in my Health within the Space of ten Days, that, as brisk, active, and chearful as I was, I began to grow melancholy and peevish. Every body was troublesome to me, and I was no less troublesome to myself and others too; neither did I at Times rightly understand either what I said or acted. On the twelfth Day I was seized with a Pleurisy in my Side, which afflicted me two and twenty Hours successively. This was seconded by a violent Fever, which held tormenting me 35 Days and Nights without Intermission; and for the first fifteen I fuffered so extreme Torture, that I could hardly get a Wink of Sleep the whole Time; so that all gave me over for a dying Man: However, I did recover, though in the 78th Year of my Age, and at a Time too when it was allowed we had a severer. Winter-season, in our Climate, than was ever known in the Memory of Man: And I am confident, nothing (under God) rescued me from the Jaws of Death, but the betaking

taking myself to my wonted Regimen of Diet. The Temperance of fo many Years together, having perfectly drained my Body of every evil Humour, had prevented the Growth of any more that were fo. It had hindered me from contracting those malignant Qualities, which are the common Fate of those old Folks, that have been so imprudent as, in their younger Days, to have lived at large and without Rule. As I was thoroughly perfuaded I was free from all those Complaints an intemperate Youth brings upon Old Age, and that I had no other to grapple with than what arose from my slight Excess; I grew resolute, and at last, though with some Difficulty, conquered my threatening Indifposition.

From these, viz. my Indisposition and Recovery, it eviRegimen the best
Physick.

dently appears, how great is the Power of Order and Disorder, of Temperance and Intemperance; the former whereof had preserved me for so many Years together in perfect Health; the latter, though it was but flight, had reduced me to the last Extremity. If the Universe consist of Order, if our natural Life depend on the Harmony or perfect Agreement of Humours and Elements, it is no Wonder that Order should preserve, and Disorder destroy. Order is of so extensive a Benefit, that it behoves every one strictly to obferve it: It renders Arts and Sciences eafy, and Armies victorious: It establishes Kingdoms, civil Corporations, and Families, in Peace and Concord. Whence I conclude, that an orderly

derly Life is the most fure Ground of Health and Length of Days, and the most efficacious or infallible Medicine that can possibly be administered to almost all Diseases: And no-Man, that duly confiders this, can deny it. Hence a Physician, when he attends his Patient, prescribes a Diet the very first Thing he does; and it is the very last Remedy he advises. him to pursue, when he has recovered, and takes his leave of him : And we need not doubt, if once we could be so wise as strictly to follow their Advice, but what we should live free from any threatening Relapses for the future. This Method of proceeding would cut off most Causes of Diseases, and render both Physick and Physicians less necessary. Nay, every Man, if he would but steadily apply himself to it, might become his own Physician, and be convinced he never had, nor can have, a better : For no Man indeed can be fo complete a Phyfician to another, as to himself: And the Reason is this: Every Man, by long Observation and various Experiments, may attain to the perfect. Knowledge of the Qualities of his own Nature, and be able to fearch out its most occult Properties: He may learn precisely the Quantity and Quality of Meat and Drink that are fittest for him, easiest of Digestion, and lightest upon his Stomach; which cannot certainly be fo well. understood by another, as by himself: And it is next to impossible, from the Result of the longest Experience and exactest Observation, precisely to know the Constitution of another, feeing there is among Men as great a Variety of Constitutions

Constitutions, as of Faces. Who now, for Example, would believe, that old Wine was bad, and new Wine good, for my Stomach; or that Pepper heated me less than Cinnamon? What Physician alive, do you think, could have discovered these hidden and surprising Properties in my Constitution, when it cost me no small Pains in making a perfect Discovery of the Causes thereof from long Experience? It is plain, therefore, no Man can become a complete Physician to another; and since no Man can have a better than himself, nor a more sovereign Remedy for all natural Evils, than a temperate Regimen, it behoves every one instantly and chearfully to embrace and follow it.

However, I do not pretend to Physicians ne-

fay, but what Physicians are cessary.

necessary; neither would I be fuspected of lessening the Esteem they justly merit from their successful Practice in the Cure of various Diseases: And, although it is certainly true, that Intemperance is the chief Source of the major Part of them, yet there are some Diftempers, which all the Care and Forefight imaginable cannot fufficiently guard against. In these Cases to rely wholly upon Nature, argues Folly and Madness; and a Man must submit himself to the Care and Direction of a Physician, if he mean his Recovery: But, for the future Preservation of his Health, there is, in my Opinion, little else requisite, but a sober and regular Life: It is a specifick and natural Medicine, which infallibly preserves a Man, let his Constitution be what it will, and prolongs his Life

Life to a very advanced Age; softens the Pains and Agonies of Death, and, when the radical Moisture is totally consumed, procures him a quiet Exit out of this World: In fine, it contains all the imagined Virtues of Aurum Potabile, or the Philosopher's Stone, which Numbers have

already fought after to no Purpose.

But, alas! the Senfual and In-Why Senfualists temperate (who indeed constitute shun a sober Life. the major Part of Mankind) are fo entirely devoted to the Gratification of their Taste and Appetite, that they cannot possibly be prevailed upon to renounce their finful Pleafures. All the Sin, and Shame, and bodily Afflictions, which are entailed upon their Follies, are insufficient to awaken them to a just Sense of their Danger. They hold it better to live, though it be ten Years less, in Riot and Excess, or even to enjoy the Pleasures of Sin for a Seafon, than always to be put to the Torment and Mortification of laying a Restraint upon their Appetites. But, alas, foolish and inconsiderate

Men! they little think of what great Importance ten Years of Life are to a Man, more espevery precious.

Men! they little think of what great Importance ten Years of Life are to a Man, more espevery precious.

riod of an healthful Life, wherein it is in its highest Pitch of Perfection, and the Understanding, Wisdom, and every Kind of Virtue, are most vigorous; which but in that very Period can never be brought to Perfection. To produce only one Instance: Were not almost all the learned Books, which are extant, composed by their Authors in their riper Age, and

in those last ten Years which the Intemperate despise and set at nought, in respect of their sensual Gratifications? Would not all Arts and Sciences have appeared less perfect, if all their Professors had died ten Years sooner than what they did? For my Part, I must own, I am contented to live as long as Nature designed me to last, and think it proper to ward off the fatal Stroke of Death as long as I can. Had not this been my Care and Resolution, several Performances of mine, which, I flatter myself, will prove both useful and entertaining to Posterity, had naver been completed.

had never been completed.

Your Libertines farther ob-No hard Matter ject, that it is a Thing impossible to live regularly. to lead a regular Life. To this I reply, that Galen himself kept it and held it for the best Phyfick: So did Plato, Isocrates, Cicero, and many of the Ancients: And in our Age Pope Paul, Cardinal Bembo, and two of our * Doges Lando and Donato; and thereby arrived to a very advanced Age. I might instance in others of a meaner Rank and Figure; but my own Experience, I think, without producing any more Authorities, is an undeniable Demonstration of the easy Possibility of observing a Regimen; and that the almost only Difficulty therein is the fetting out well at first, viz. with Courage and Resolution. Neither do I think Plato's Objection of any great Force, who affirms, that those, who are intrusted with and employed in the Affairs of the Republick, cannot possibly

^{*} Chief Magistrates of either Venice or Genoas

live a fober and regular Life, by reason of their being under a Necessity of making frequent and tedious Journies, or being exposed to the various Changes of the Winds and Weather, and enduring many Hardships and Fatigues in the Service of their Country, which are directly contrary to the Rules of Diet. These are Inconveniencies, it is true, but no very confiderable ones. It is in every Man's Power, if he will, to eat and drink what is wholesome, and to avoid overfeeding. He that is wife enough to observe this, will fuffer little from other Inconveniencies. The Diseases of Repletion, which infallibly destroy the best natural Capacities, and all Power of acting agreeably in any Post, would be thereby happily avoided, and the Man himself at full Liberty to exert his Reason, and his Wisdom, upon every Occasion, in his Country's Cause. But some again may object, if a Man that is in Health, always governs himfelf like a fick Perfon, what Diet must he make use of when he is taken ill? To this I reply, that Nature, who endeavours, as much as possible, to preserve all Beings, instructs us after what Manner we ought to govern ourselves in Sickness: For fuddenly she takes away our Appetite, so that we can eat little or nothing at all. At that Time, the fick or infirm Person, whether his Manner of Living has been regular or not, ought to feed on nothing but what is proper for the Nature and Weakness of his Distemper, viz. on Broths, Jellies, Cordials, Barley-Water, &c. When he perceives himself on the mending Hand, and fancies he can with Safety venture

upon a more solid Nourishment, he must be equally careful to eat less than he did before he fell fick, and to restrain the violent Cravings of his Appetite, till he be perfectly restored to his pristine Soundness of Constitution. To act otherwise, would be to run the Risk of (perhaps) a more fatal Relapse. But after all, I dare affert, that the Man, who pursues a temperate Life with all possible Exactness, will seldom or never be seized with a Disease; or, if he should, that his Indisposition will be but very slight and short: For this Way of Living effectually prevents every evil Humour from engendering in the Habit; and there certainly can be no Effect, viz. Distemper, where the productive Cause is removed.

Since then an orderly Life is A fober Life is fo beneficial, fo virtuous, fo a- to be embraced.

miable, so agreeable to our Na-

ture, and easily attainable, ought not all Men instantly to embrace it with eager Affection? No Man need be discouraged, or conceive an Aversion to it, from the Method I pursue. No Man is confined to that exact Measure, or particular Sort of Food, I am, nor yet prohibited the Use of many Kinds of Victuals I never taste. I eat but little, because that very little fuffices my weak Stomach; and I abstain from Fruits and Fish, and many other Things, because they are prejudicial to me : But those, who are not offended by them, may, nay ought to use them; only it behoves every one to be cautious he eat no more, even of what he finds most agreeable to his Stomach, than he can perfectly

perfectly and eafily digest. In short, he who is not offended at any thing, has the Quantity, and not the Quality, for his Rule; than which

nothing is more easy to be observed.

Let no Man object to me, Some Libertines that there are Instances of Perlive to a great Age, but these fons, who, although they have, are very rare. during the whole Course of their Lives, been prone to lewd and fenfual Gratifications, yet are arrived to the utmost Length of Mortality, healthy and vigorous. This is but very rare, hazardous, and in a manner miraculous; and it is by no means fafe or proper confidently to venture upon the Trial of it. No wife Man will risk the Loss of his Health, and perhaps Life too, on Hope of an happy Issue, which yet befalls very few. It is much more certain, that a fober old Man, of an infirm Habit of Body, is secured in regard of his Health and Life, than the most robust, sprightly, vigorous Youth, who daily lives without Rule or Measure. However, this is absolutely certain, that one of a naturally found Temperament, with the Advantage of an orderly Life, shall be able to spin out the Thread of Life to a much greater Length than another of a weakly Nature, though he be equally as strict in the Care and Management of his Constitution. The Almighty Creator indeed is able to form Bodies fo furprifingly strong and robust, as to be Proof against the most exorbitant, and oft-repeated Excesses, and even against the Storms and Batteries of Time itself. One Instance whereof I remember to have happened at Venice, and another

another at Padua: The Procurator Thomas Conterini was one, and Chevalier Capo di Vacca the other. No two ever did, or could endeavour to abuse their Constitutions more; and yet they enjoyed an uncommon Length of Years, feemingly in Health and Vigour, and at last both died by a pure Dissolution. But where among ten Thousand shall we be able to pick out their Fellows? All others therefore, who are defirous of attaining to an healthy Old Age, who would avoid a painful or violent Separation of Soul and Body, and who, in fine, would be capable of relishing the inexpressible Comforts and happy Fruits of fuch a Period, must never think of compassing their Wishes or Designs by any other Means than by a constant and regular Course of Life and Diet.

It is Sobriety alone which preferves our Bodies in a steady of Sobriety.

Course of Health and Vigour:

It is this which supplies them with sound Blood and sweet Juices, and prevents the Emission of those noxious Fumes and Vapours to the Head, which are perpetually steaming from a filthy and polluted Carcase: It is this which clears the Brain, brightens Reason, and gives a full, free, and perfect Use of all their Faculties: It is by this that the Mind is enabled to soar above the World and its Vanities, and to taste the rapturous Delights of an heavenly Contemplation; Delights, which the Voluptuous and Intemperate can have no Notion, no Experience of at all. Infinitely agreeable indeed, and no less various, are the Resections of a sober Mind,

G 2

which

notificat

which that Man can never be truly capable of, and much the better for, whose Brains are intoxicated or bewildered in the Fumes of Drunkenness and Gluttony. But when once their evil Effects vanish, and the Understanding comes to itself again, the Man then begins clearly to see and apprehend the real Nature of Things, and to make fuch useful Discoveries, from the Works both of God and Nature, as are impossible to be discerned or comprehended in a State less pure, or with Faculties less refined. He can then plainly see the Folly and Baseness of Sin, the many precious and admirable Effects of Virtue, and the inexpressibly wretched Condition of those unhappy Souls who are fatally deluded by their Lufts and Paffions. The three most dangerous are Voluptuousness, Ambition, and Avarice: These Defires are the natural Concomitants of our Youth, and never fail to increase with the Age of old Men of intemperate Lives. A wife Man takes care to curb his Passions before they have taken too deep Root: He corrects them be-Violence. A Victory this, which, if well fecured, is attended with the most valuable Blessings, viz. the Favour of Heaven, and Love of all the World. This Man fears no Evil from his approaching Dissolution. He is conscious his Virtue and Integrity will secure him. He is not afraid of the Terrors of Hell, because he is a Christian, and puts his Trust in the Blood and Merits of Jesus Christ. He dies without repining, because he is sensible this World was never

never defigned for his continuing City; and his Reason sweetens the Bitterness of his Fatality. In a word, he chearfully refigns his Soul into the Hands of God, when, in a long Succession of happy Years, he has had Time enough to enjoy his Virtue and Reputation, and confiders, that scarce one in ten Thousand, who have lived the very Reverse of himself, has been blest with such a Length of Days. His Joy is still the greater, arising from a Reflection that his End will be calm, and attended with less Horror; that he shall depart in Peace, as a Lamp goes out for want of Oil; and so be translated from this corruptible Life, to those Seats and Realms of Blessedness and Felicity which are eternal in the Heavens.

O holy, truly happy, and The Praise of a

justly to be admired Life of fober Life.

Temperance! And O unhappy and detestable Life of Intemperance, which incumbers Mankind with so great Evils and Calamities! How beautiful and amiable are the very Words—Regularity, Sobriety, Temperance! And, on the contrary, how loathfome and disagreeable is the Sound of these Words—Irregularity, Gluttony, Intemperance, in the Ears of the chaste and sober Part of Mankind! Nay, as wide a Difference is discernible between these distinct Sounds, as between those of the Angel and Devil.

Thus far having explained the Reasons which occasioned me to abandon Intemperance, and embrace its contrary Virtue; as also the Method I observed therein, the good Effects I

G 3

found

found thereby, and the many great and fingular Advantages others may as reasonably expect to reap from the Practice of it; I come now to address myself to those Sensualists, those stupid and dull Souls, who object, that a Man's Life, when once he shall have almost reached Seventy, is not worth the having; that the Residue of his Days are, as they foolishly conclude, rather Death than Life, and over-burdened with Miferies and Infirmities, Anxiety and Discontent. But give me leave to fay, that they are mightily mistaken, I myself being an Instance sufficient to confute their false Ideas. I am at this prefent 83; and yet the Pleasures and Recreations Istake, are fuch, as that most Men generally account me happy. First, I am continually in

Many are the Health, and so nimble, brisk Delights of a so- and active, that I can get on ber Old Age. Horseback with all the Ease imaginable off any rifing Ground. I am able also, and often do ascend steep and high Hills on Foot without Lassitude. Besides, I am ever chearful and merry, and well pleased, uninterrupted by any anxious Apprehensions, or violent Perturbations of Mind; in whose Place, Joy, and Peace, and Love, have taken up their Refidence in my Soul. I am fo far from being weary of my Life, that no Man in the World can enjoy the Pleasures of it in fuller Perfection, or with more fenfible Delight. Sometimes, as Occasion serves, I converse with Men of Literature, Ingenuity, good Morals, and found Religion: At other Times, when I chuse rather to be alone, I apply myfelf to the reading of fome

fome of the choicest Books of Divinity, Philofophy, Morality, &c. I can get. When I lay these aside, I fall immediately to writing, ever studying, as much as in me lies, to promote the Good and Happiness of my Fellow Creatures. All this I do at my Leisure, at stated Times, and without the least Inconvenience of-

fered to myself, or my other Concerns.

I dwell in an House, which, besides its being fituated in the pleafantest Part of Padua, may be reckoned the most beautiful and commodious Edifice in this learned City: Few in this Age can equal it; and its Apartments are fo artificially contrived by me, according to the nicest Rules of Architecture, that I can in either Seafon screen myself, and live secure from the Extremes of either Heat or Cold. Now and then I take a Turn or two in my Gardens, along my Canals and Fish-Ponds, where I agreeably amuse myself with Fishing an Hour or two together under some pleasant shady Bower. Some Months in the Year I spend very delightfully on the Euganian Hills, where I have another very elegant Seat or Mansion-House, whose adjacent Gardens and Fountains are beautifully neat, and diversified with many Curiofities both of Nature and Art. When I am here, I divert myself often in going out with Beagles, and in killing Game, whereof there is great Variety in this Country. Sometimes I repair to, and enjoy my Villa, fituate in a Valley beneath, which indeed is extremely pleafant, the many Paths thither all meeting and terminating at a large Area, in the Midst whereof is built a G 4

pretty neat Church, well adapted to the Condition or Bigness of the Place. A little murmuring Brook, called Brenta, divides and gently glides through this Villa, which is encircled with many large, fruitful, and well-cultivated Fields, and a confiderable Number of Buildings. This was not so anciently: The Place was then moorish and unhealthy, abounding in Bogs and Fens; an Habitation, fitter for Snakes, Toads, and Serpents, than for Men to dwell in: But I drained the Marshes; so that, being dry, the Air foon became more wholesome; whereupon Men flocked thither, and built Houses with wonderful Success. By this Means was the Place brought to that Perfection we now behold it in; fo that, I may truly fay, I have dedicated to God both a Temple, an Altar, and Hearts to worship him; the Thought whereof, as often as I reflect upon it, is a never-failing Spring of Comfort to me.

Once a Year I make a Visit to some one or other of the neighbouring Cities, where I enjoy the Sight and Communication of my Friends and Acquaintance, as also of excellent Artificers in Architecture, Painting, Sculpture, Musick, and Agriculture, whereof in this Age there is a great Plenty. I carefully inspect their Pieces, compare them with those of Antiquity, and am continually learning something that is new and worthy my Notice. I survey Palaces, Gardens, Antiquities, publick Fabricks, Temples, Fortifications; neither, in short, omit I any thing which may serve either to gratify my Curiosity, or advance my Knowledge. I am infinitely

infinitely delighted also with the charming Prospect of the various Places, and their beautiful
Situation, in my Travels backwards and forwards; the verdant Plains, the losty Hills, the
crystal Fountains, the antique Structures, and
melodious Groves, all conspiring to form the
most agreeable Appearance to the Eye, and
captivate the Sight. Neither is this Pleasure of
mine made less by the least Decay of my Senses;
I see, and hear, and enjoy them all in as full Perfection, as ever I did in my Youth; especially
my Taste, which any simple Fare suits better
now than heretofore, when I was a Slave to my

fenfual Appetite.

The changing of Beds creates me no Inconvenience at all: I can fleep found and quietly any where; and, when I dream, my Dreams are pleasant. But one Satisfaction, which pleases me above all the rest, is to reslect how far instrumental my Suggestions and Advice have been towards the reducing of many rude and uncultivated Places to good Husbandry; a Work of fo great Importance to this State, and so expensive and difficult to be performed. I was one of those Persons who were deputed for the Direction and Furtherance of that Undertaking: I refided two Twelve-Months together in those marshy Places, even in the Heat of Summer, which in Italy is exceffive; and yet (Thanks to the powerful Efficacy of my Regimen) I received no Hurt thereby. These are the Solaces, these the substantial Pleasures, of my Old Age, which are superlatively preferable to the Joys and Delights of a vicious and intemperate

perate Youth. I am (God be praised) persectly free from those manifold Anxieties or Troubles of Mind, those tormenting Maladies or Pains of Body, under which a Multitude of indiscreet

Persons, both young and old, do labour.

A very convincing Argument of the Vigour and Sprightliness of my bodily as well as mental Faculties, (if the bare Mention of it may not be thought too trifling for a Subject of this Nature) is this, namely, that at these Years, viz. 83, I have composed a very diverting Comedy, whose Scenes are diversified with an inoffensive Variety of Wit and Humour; which has in it an agreeable Turn of Thought, and Quaintness of Expression. Comedy, you know, is generally the Child of Youth, as Tragedy is the Product of Old Age; the latter, on account of its Gravity and Seriousness, befitting more mature Years; whilst the former, by its Gaiety of Wit and Humour, is more agreeable to Youth. Now, if an ancient Greek Poet, ten Years younger than myself, was admired and celebrated for his having written a Tragedy; why should I be esteemed less happy, or less myself, who have composed and published a Comedy; when I am confident, that same Poet, though he was ten Years younger than I am, yet had not a better Share of Health, nor a livelier Imagination?

But to draw towards a Conclusion: As an Addition to my present Happiness, I daily behold a Kind of Immortality in the Succession of my Posterity. When I come home, I find eleven Grand-Children of mine, all the Sons

of one Father and Mother; all, as far as I can perceive, in perfect Health, docile, and of sober virtuous Dispositions. I am pleased with the innocent Mirth, harmless Sports, and inoffensive Prattle, of these Youngsters. Some of the elder of them indeed entertain me more agreeably: They understand Musick, often play to me on the Harp, and fing to it melodiously; and I myfelf, who have now as strong and clear a Voice as ever, often join in Concert with them.

Is not this an undeniable Proof, that the Life I lead at Age preferable to these Years, is not alanguishing Youth. melancholy one, but really a

an intemperate

Life of the utmost Chearfulness, Mirth, and Pleasure? I folemnly aver, that, were the Option in my Power, I would not exchange Age and Condition with those Youths, though never so robust and flourishing, who are Slaves to their Appetites. My own Experience hath convinced me, that fuch as these are continually exposed to a thousand Diseases and Deaths. am not insensible, how rash and inconsiderate that Age is, how easily transported by Heat and Pasfion, and how apt too confidently to rely on their own Strength, and venturoufly to rush upon all those Dangers their Lusts and Passions prompt them to. They continue obstinately deaf to Reason and sober Counsel, and will not defift from gratifying their corrupt Inclinations, let the Consequence be what it will; never confidering, that they are going the readier Way to increase and multiply those evil Humours which

which will infallibly render their Lives miferable, and hurry them to their Graves. The former of these two Evils is cruel; the latter insupportable, and terrible to all loose and wicked Livers, but especially to the younger Sort of People, who dread nothing so much as dying; and to Sensualists, those already hardened in a sinful Course, who tremble, at least in their more melancholy Moods, at the Thoughts of a

future Judgment.

As for my Part, bleffed be God! I am freed from any fearful Alarms of this Nature. I am certain, I shall not be seized with a Disease, so long as the Cause, which must produce it, is prevented by that facred and powerful Medicine, Sobriety; which I ever make use of: And for the anxious Fear of Death, at which the Diffolute and Profane startle and are confounded, it gives me no Manner of Concern at all; because I have for so many Years together given Way to, and followed the Dictates of, right Reason and true Religion. Whence I look upon it as a Disgrace, to be afraid of that which cannot be avoided; and I hope, when my Time comes, to fubmit with Patience and Refignation, and to share in the Merits of my Saviour and Redeemer. But, although I am senfible I must die, yet, I am persuaded, it will be a confiderable Time first, ere I shall: For I know (fetting afide Cafualties) I cannot die but by a pure Dissolution, my Regularity having left Death no other Way of destroying me: And that is an honourable and defirable Death, which comes upon us by no other Means than by.

by a total, or a natural Dissolution. Nature herfelf, who has linked the Bonds of our Life together, can easily loose them again, without the least Violence; and give Men a longer Respite than Diseases usually do, which forcibly rend those Chains as under. An End so painful, or a Death so violent, can be only the Effect of foreign Causes; since nothing is more opposite to Nature, than that which has a Tendency to

weaken and deftroy us.

When the Time of a Man's Diffolution draweth nigh, he finds that his Strength begins to fail him gradually: His Body flags and droops; the Vigour of it is abated: Its wellknit Limbs grow weak and feeble, and tremble, and bend, and knock together: His Speech, his Sight, his Hearing, his Memory and Judgment, all grow imperfect: In fine, the whole human Fabrick becomes tottering and decayed. But (Thanks to Heaven!) this, as yet, is not my Case: On the contrary, I firmly believe, that my Soul, finding itself so well in my Body, will not (in Spite of all the Opposition of the elementary Qualities, whereof we are composed) be easily brought to quit her Habitation, and that it must be a Work of some considerable Time, ere she can be put to Flight. Word, I am confident, that I shall live many Years longer in perfect Health, and the full Enjoyment of the Pleasures of this World; which indeed is very comfortable to me, and might be so to others too, would they, like me, but make a proper Use of it. I hope from hence to be made a Partaker of more ample Comforts

Comforts and Bleffings in the next World; and that through the Means of that true and holy Sobriety, to which I have been devoted: To those Virtues I owe the happy and complete Conquest I have gained over my sinful Lusts and corrupt Affections: Nor need any Man despair of tasting the same Felicity, who will be careful, as I have been, to live, as becomes a Christian wirtuens and schools.

Christian, virtuously and soberly.

Since therefore a regular Life An Exhortation is fo happy, its Name fo comto a Life of Sobriety. mendable, its Possession or Enjoyment so desirable and advantageous; nothing more remains, after what hath been already faid, but to exhort, admonish, and intreat all Men, who tender their own Happiness, to embrace, with the strongest Holds they can, this inestimable Treasure; a Treasure, which (as it exceeds all the Riches of the World besides, by bestowing upon Mankind two of the greatest Bleffings, viz. Health and Long Life, without which no Man can enjoy the least Degree of Happiness) deservedly merits our utmost Esteem, eagerest Pursuit, and most careful Preservation of it when obtained. This Treasure, I am recommending, is that holy Sobriety which is ever well-pleafing to Almighty God, and the fincere Friend of Nature: She is the Daughter of Reason, the Sister of all other Virtues, the Concomitant of Temperance, always gay, always modest, always wife and punctual, and regular in her Functions and Operations: She is the Root of Health, of Industry, and of every Exercise and Employment that are worthy

thy a noble and divine Soul: She has the Laws, both human and divine, to countenance her: When she reigns, (like Clouds dissipated by that glorious Luminary, the Sun) Repletion, superfluous Humours, noxious Vapours, Diseases, Pains, and the Terrors even of Death it-

felf, vanish.

The Beauty and Happiness of it should attract and captivate our Affections. The Promises she makes us are very fure and confiderable; nothing less than the Duration of our mortal Being, and the complete Victory over the Vices of our Tempers and Constitutions. She will be the faithful Guardian of every Man's Life, that will but embrace her; whether Rich or Poor, Young or Old, of what Sex foever: She'll teach the Rich Man Moderation; the Poor Man, Frugality and Contentment: One she will teach Continence; another, Chastity: Old Men, the Art of deferring the evil Hour of their Death; and young Men, the Method of prolonging their Lives. She will fcour the Drofs off our Senfes, render the Body vigorous, the Understanding clear, the Soul amiable; give us a happy Memory, free Motions, and just Actions. In a word, it is by her, that all the Powers both of Soul and Body are maintained in a beautiful Order and perfect Harmony; which nothing but Irregularity can ruffle and discompose.

O most sacred and powerful Sobriety! the sure Protection of human Nature, the tender Guardian of our Lives, and infallible Medicine both of Soul and Body; how ought Men to praise thee, and with Hearts sull of Gratitude

Of the BENEFITS of, &c.

38

to acknowledge thy Benefits; thou, who affordest them Means of arriving at the Joys of Heaven, and of preserving their Health, and lengthening out their Days, here upon Earth!

It were easy to expatiate on the Commendation of this Virtue; but, as it is not my Design at present to write a Panegyrick, I shall here stop my Pen, keeping within the Bounds of Sobriety on this Subject; and defer what I have more to say on this Head, to some suture Opportunity.

FINIS.

6/27. We 28/5/40.
