NEW

DISCOVERIES

Relating to the CURE of

CANCERS

WHEREIN

The Painful Methods of Cutting them off, and Consuming them by Causticks are Rejected, and that of Dissolving the Canterous Substance is recommended, with various Instances of the Author's Success in such Practice, on PERSONS reputed Incurable;

IN A

Letter to a Friend

To which is added,

A SOLUTION of some Curious PROBLEMS, concerning the same Disease.

By WILLIAM BECKETT Surgeon.

The Second Edition, with Additions.

LONDON: Printed for George Strahan, at the Golden-Ball, over against the Royal Exchange in Cornhill. 1712.

New DISCOVERIES, &c.

SIR,

LOOK upon it to be peculiar Happiness to live in an Age, when Men of our Profession consider, that as the Art is capable of receiving daily Improvements, useful Discoveries, confirm'd by Experiments, ought to receive the joint Concurrence of their Well-Wishes; notwithstanding, they may contradict an Opinion that has been almost universally receiv'd. These, we shall always find, are the Gentlemen that in opposition to those Bigots whose Tempers discover them to be the Votaries of a few opinionative Men, endeavour to guide their Judgments by Reason, back'd with judicious Observations, and what ever Arguments are produc'd, will never go about to controul Matter of Fact. It's a Grand Truth that Necessity gave being, to Physick and Surgery, and Experience is the only Way to bring (4)

bring'em to Perfection; but it's much to be lamented by them that are Well-Wishers to those Arts, that the Perfons which are perhaps capable of advancing them most, devote themselves so much to speculative Fictions (the Effects of teeming Brains) that fome have pretended with a magisterial Air to dictate, even to experience it self. In fuch a Case it wou'd be needless to go about to offer Arguments sufficient to disengage their Inclinations, time only must discover to 'em their Error, when it makes 'em sensible they have, to no Purpose, persisted in the Pursute of frivolous Niceties; for in reallity, the Benefit of Mankind in general is deduc'd from practical Truths. The Thoughts of this are sufficient to inspire every generous Soul with an Ardent Defire of discovering something that may be of so universal an Advantage: As for my own Part, I was not animated to concern my self in the Undertaking I have engag'd in, by a Prospect of gaining that Honour that is often liberally bestow'd on those that mint new Hypotheses, or make new Discoveries; my only Design was to inform my self, whether some of those Diseases, which are generally reputed incurable, are not actually in themselves curable, and by this means to wipe off a Reproach which has been cast on Nature, when in reallity it proceeds only from our FI WO

own Weakness, and the Infirmity of our Art. A diligent Application to those Distempers which baffle us most, has been frequently recommended by very reputable Authors, and some of those who have obliged us with the Histories of Diseased Persons, have very often mention'd considerable Cures, which have been happily perform'd after the Patients have been look'd upon by some as incurable. Hippocrates tells us, Lib. 2 Aph. 52. Si Medico secundum rectam Rationem Facienti, Curatio non statim succedata non est tamen mutanda Methodus, quamdiu id restat quod a Principio visum est. I am fully persuaded that most Practitioners in Surgery have at some Time or other, by an industrious Application, been successfull where Art could not warrant a Cure. As to the Disease, I propose to make the chief Subject of this Letter, tho' it be generally branded with the Character of Incurable, I must freely own I never cou'd discover any thing effential to it in general that shou'd make it so; it's true, there are many Diseases that are not to be cured, where certain Circumstances are conjoyn'd, which very much contribute to the Misfortune; tho' Others of the same Class exempt from those Adhærents may, perhaps be happily enough cured: Thus for Instance. In Cancers we have but little Reason to expect a Cure in a Person that's old, if the

the Cancer has been of many Years standing, and is firmly fix'd to the Ribs; but if the Patient be not so far advanc'd in Years as to be uncapable of receiving the Benefit of Nature by the regular Discharge of the Menses, and the Cancer be loose; notwithstanding, it be Ulcerated, over-spread with fungous Flesh, discharge a filthy Matter, and smell very offensively; we do upon Experience affirm that fuch a Patient may be cur'd. We must own we cannot be of the Opinion of the Paracelsians, who affirm there is no Disease but what is curable in any Patient, for the Reason we have given; nor can we, with the Galenists; agree that the Gout, Dead-Palsie, Stone, Cancer, &c. are Difeuses absolutely incurable; because Experience discovers the contrary. We find that Mr. Boyle is of the same Opinion, and thinks it were no ill Piece of Service to Mankind, if a fevere Collection were made of the Cures of fuch Perfons as have been judged irrecoverable by the Doctors; that Men might no longer excuse their own Ignorance by the Impotency of Nature, and bare the World in Hand, as if the Art of Physick, and their Skill, were of the same Extent. There seems to be one very effectual Way to rescue the medicinal Art from the Aspersions of some bold Persons; and that is that of a certain Number of regular Practicioners in

(7)

Physick and Surgery, each of them should apply himself to the Study of one particular Disease: By this means we should soon find they wou'd be capable of Surmounting those Difficulties that have all along baffled the most Judicious of the general How odd, and disagreable Practicers. this Opinion may feem to some Men I know not; but I affure you Sir, I find it of a very ancient Date, for Herodotus, a Greek Historian informs us that before his Time, the Physitians in Agypt, used to apply themselves to the Study and Advancement of one Disease in particular Baricellus, and Lionardo di Capoa, observe the same likewise, in Relation to the Practice of Physick in that Country. Baglivi, in the Scheme he lays down for erecting of Colledges for the Improvement of Physick, tells us that every Fellow of his Literate Society must have one Disease allotted him for the Task of his whole Life; and which elsewhere he says is not sufficient for the illustrating the Province of one Disease; but that we lie under a Necessity of taking in Materials from all Hands. But there is no Man that we know of, has spoke more agreably of this Matter than Dr. Harris, in his Pharmacologia Anti-Empirica, he owns that he took more than ordinary Pains in one particular Disease, and assures us he verily believes if learned Men, after a com-

compleat Acquisition of the universal Method of Physick, and a necessary Search into the Nature and Cures of those manifold Infirmities and Diseases, which, with a kind of infinite Variety, do afflict Mankind; would, with their utmost Vigour and Resolution, prosecute the Knowledge of some one Disease eminently above others; they wou'd, most certainly, find a particular Providence attending and affifting them in fo good and honest a Design. He adds, a few Pages farther, that wherever a Man's Thoughts are intent and fix'd, wherever his Genius does naturally incline, and all his Aims and Application do continually tend, whether it be to pertinent or infignificant Matters; whether it be too useful, or else meerly curious Things; if he has but tollerable Parts, and Education corresponding, he can hardly ever miss; it is hardly possible he should miss; the becoming Eminent, and in great Measure perfect, (I mean perfect (fays he) according to the Modulum of humane Capacity) in that one Point. But there is one Thing to be recommended to the Consideration of the Person, who takes upon him the Enquiry into the Nature of one particular Difense, which perhaps he might be very liable to err in, if not caution'd against; and that is, that he be not too bold and rash in his Attempts; for as Ga-

len says, The Physitian's Art is not like that of an Artificer, who may make what Experiments be pleases, to satisfy bis Euriosity; because if he spoils the Materials he works on no Body, is endanger'd by the Miscarriage: In Corpore autem bumano (adds he) ea tentare que non sunt Experientium comprobata Periculo non vacat, cum temeraria Experientice Finis sit totius Animantis internecio I believe we shall find, that one of the grand Reasons, why Persons, generally speaking, have been so negligent in making any Attempts on Cancers, has been the seeming Discouragement they have all along met with from Authors. The Caution Hyppocrates has given us in his Thirty eighth Aphor. Sect. 6. has scarce been omitted by any one confiderable Person that has wrote of this Subject, tho' perhaps the Sentence has often had an Exposition put upon it, contraryto the Author's meaning; but of this, more in its proper Place. I proceed now to give an Idea of Cancers in the Breast from an external Cause; and this I shall do without concerning my felf with the Opinion of the Antients; for fince we have been so happy as to live in an Age which. will be remarkable for the many surprising Discoveries which have been made in Anatomy: We should be reckon'd unworthy the Advantages we enjoy, if we did not study to apply them to the Benefit of Mankind

Mankind in general. The more inquisitive and learned Part of the World, are at this time very well affured that the Animal Body is an exquisitely fram'd Machine, and that its Composure is little else than a Compages of branching and winding Canals, which are kept to a moderate Degree of Extention, by Fluids of different Natures; and that the motions of these were first determin'd by the divine Architect: Thus in a natural State, the whole Fabrick is govern'd by certain Laws impress'd on the Fluids; and we often find the unhappy Consequences of the Discomposure of a Part, to discover themselves first by an Interruption of the Motion of the animal Juices. Thus in a Cancer of the Breaft, which proceeds from a Blow or Bruise (as upon strict Enquiry we have found they most commonly do) is it not probable that by fuch means a Confusion of the true Order of the little Glandulous Grains and their excretory Ducts may happen? and at the same time an extravalated Lympha may lodge in such a spungy Texture, which in time becoming viscid, will coaless with the Glandular Substance, and form a Maß conside-rably compact? Now this being so, it's reasonable to believe that as the Lymphatic Juice continues its Motion till it arrives at the indurated Part, its Passage must

must be embarrass'd there; upon which, 'twill soon be qualify'd for a Union with the remaining Part of the glandulous Substance of the Breast; and so the whole be perfectly changed from what it was before. This, Hypothesis is, in a great Measure, grounded on Experiments; for if we express a Juice from some of the Cancerous Maß, and hold some of it in a Spoon over a Fire, there immediately flys off a small Vapour, and the Remainder hardens not unlike the White of an Egg boil'd; this shows it to have the Properties of the Lympha; For the Chymical Analysis of that Liquor assures us 'tis a Composition of a great deal of fixt Sulpbur, a little Volatile, some Phlegm, and much Volatile Alkalie; to which some add a little Earth: Now while the Volatile Alkalie keeps the Sulpbur dissolv'd, the Lympha remains in a State of Fluidity; but when, by making the same Experiment, the Volatile Alkalie is evaporated, the Remainder hardens, and forms a pretty, compact, whitish Substance. From hence the judicious SURGEON may easily deduce the Reason why these Sort of Tumors can never be brought to Suppuration. We shan't be so particular as to mention those Cancers which proceed from internal Causes, nor several other things which relate to the former; for what We have here faid, we look upon to be com-

commonly the Method of the Formation of 'em; and as fuch, we did endeavour to calculate Remedies that should peculiarly operate on the Mass, so as to dis-unite the firm Cohæsion of its Parts, and dispose 'em to separate and come away, without any great Inconvenience to the Patient; which is what we wou'd recommend with all the Earnestness imaginable to those that are defirous of discovering aMethod of Curing Cancers. We were before sensible that it was possible for one Body to operate on another determinate Body, without being able to have any fuch Effect on innumerable Others; as Quickfilver will dissolve Gold, Aqua-fortis Iron, Vinegar the Shell of an Egg, Oyl common Sulphur, &c. which won't have any fuch Effect on feveral other Bodies; for there's nothing more certain, than that the Operations of Diolvents are so determin'd by the various Textures of the Bodies on which they are employ'd, that a Liquor that is capable to. Corrode a more hard and folid Body, may be unable to disunite the Parts of one more foft and thin, if of a Texture indispos d to admit the small Parts of the Monstruum It may be expected I should say something in relation to that which is generally look'd upon to the grand Cause of the Incurableness of Cancers, I mean the acid Humour in the Blood. But if those Gentlemen who are fond of enter-

entertaining this Opinion, do but consider that Cancers are often form'd in a perfect State of Health; and that during the Time the Cancerous Substance dissolves, and comes away according to our Method, the Sides will run a digested Matter, and heal by the Application of dry Lint only; they will be of my Opinion, that neither the Atrabile of the Ancients, the Corrosive Alkalious Salt of the Chymists, nor the predominant Acid of the Rest of the Moderns, are capable of procuring those Alterations that Cancers are sometimes attended with. If we trace the Writings of our Predecessors to their earliest Date, we shall find that many of them have made Mention of the Roots of the Cancer, which they took to be the large blew Veins that are often extended on its Surface; and the entire Removal of these they thought to be absolutely necessary, or the Patient cou'd not be cur'd: But I believe there is no Body at this Time that confiders the Mechanism of the Parts in fuch a Condition, but will agree they are the necessary Consequents of it, and that their Absence, or Presence is of no Importance; that the Cancer is sometimes attended with Adharents, or Appendices, which may very well refemble Roots, we are affured; but these generally lay deep, and not easily discover'd; the most considerable One that ever we faw was very near Five

Five Inches long, and of an unequal Bigness, some Part of it did not exceed the Largeness of a Goose's Quill, but some others were near as big as the Top of the Thumb, which resembled so many Knots in it, it divided in the Middle, and continu'd separated about an Inch and a Half, and then re-united, 'twas of a more tender Substance than the Body of the Cancerous Mass, but of the same Colour, and was probably the Juice that was last apply'd to the Cancer, which assum da Form agreable to the Cavities it lodg'd it self in. Such Adhærents as these are, I am more inclin'd to believe, are the Cause of the unsuccessful Attempts on Cancers, than any Acid in the Blood; for I am of opinion there are few Persons unacquainted with Medicines that are capable of correcting its Aciduty, when it happens; and had the Cure of Cancers depended on that, I am positive they wou'd notat this Time have had fuch ill Character. We have before, show'd that Cancers have generally their Rise from a Blow or Bruise, and that when the Body is in an healthful Condition, and the Blood and Lympha temperate and fweet: Now if there always is an Acidity of the Blood when Persons are afflicted with Cancers, the Cancers must sometimes cause it, and not the Acid in the Blood the Cancers, as is the Opinion of most of the Moderns. What has been hitherto faid

faid, is sufficient to prove that if Men will be always so sluggish as to acquiess in the Dictates and Dogmatical Politions of their Predeceffors, and not exert their Faculties in endeavouring to undeceive themselves; we must no longer expect our Art will receive any Advancements, but as Slaves to their Opinions content our selves with what we know already. Were not Parisani, Riolan the Son, and Plempius, fo much in the Intrest of the Ancients, that when our Country-man, the affiduous Harvey had discover'd the Circulation of the Blood, they not only opposed his plain Demonstrations, but engag'd in vigorous Disputes against him, tho' at the last they were obliged shamefully to recant their Follies. Celsus tells us, Vix ulla perpetua Præcepta Ars Medicinalis recipit; Scarce any of the Precepts of the Medicinal Art are perpetual. And shall we engage then in the List with a few opinionative Men, that ground their Course of Practice on those Methods only, in which they have been brought up, and implicitly affent to the Conjectures of Others. No certainly, this wou'd be to strangle Truth, and extinguish the Vigour of our Wits with precarious Authorities. Confonant to this, Dr. Paxton, in his lately Publish'd Treatise tells us, Thus Men, out of atrifling Distrust of their own Parts, will not

tife them; or out of Laziness of Temper, will not employ them, chusing rather to be wife or learn'd, by being adorn'd with Others Whimsies, than undergo any Labour, Fatigue, or Trouble, of being really (o. I believe there are some Men that would rather contradict their Senses than deny the Authority of a darling Opinion: Of this, we have a sufficient Proof in an Instance, related by an Italian Author, before-mention'd. He tells us, That a certain Publick Reader long Time versed and grown Old in the Books of Aristotle being one Day present at a Dissection, and clearly seeing that the Vena Cava takes its Rife from the Liver, confes'd with Astonishment what his Senses discover'd to him, but that he ought not therefore, by crediting his Senses, to contradict bis Master, who constantly affirms all the Veins in Man's Body to have their Original from the Heart; because said be, it is much more easy for our Senses to be sometimes deceived, than the Great and Sovereign Aristotle. I here serioully confess, I have as much Veneration for Antiquity as any Person whatsoever; but it would be ridiculous, if, as One fays, we shou'd so far forego our own Judgments, as always to follow the Foot-steps of Others, and to be certain of nothing our selves: For this wou'd be to see with others Eyes, to hear with others Ears, and to understand with other Men's Intellects; so that whenever we make Quorations

tations from the Ancients to strengthen our Opinions, we ought to do it judiciously, and fully confider, whether their Notions of Things, are consonant to the Experience of these Times. To prove to you, Sir, that I have not proceeded to apply my self to the Cure of so formidable a Difease, without a Precedent, I shall instance to you that Fuschius, a learned Italian, Surgeon, had fuch a wonderful Reputatation forit formerly, that some Authors say he was diffinguish'd by a particular Title, which discover'd his Success. His Method I have made use of, and tho' by passing thro' feveral Hands (the Author being mention'd by Few) it has been stampt with wonderful Encomiums, I have not hitherto, found it deserves it, notwithstanding, I did not omit the most minute Circumstance in preparing the Medicine, or prosecuting the Directions; but in its proper Place, I shall take particular Notice of this, and several other Remedies, that have been recommended by some Authors, as substantial and extreamly useful; for if in One or Two Instances they have been crown'd with Success, by Degrees they are handed down as infallible in all Difeases of the like Form. To the former Account I may add, that Monsieur Alliot, Physician to the Duke of Lorrain, has apply'd himself to the Cure of this Disease very

very successfully, as a Schedule he Publish'd at Paris some Years ago informs us; we are likewise affured by Mr. Boyle, that Dr. Haberfield, one of the Principal Physitians of Bobemia, has had extraordinary Success in the Cure of Cancers; and the Sieur Gendron, Doctor of Physick in the University of Montpeller, has done extreamly well on that Head; the Latter of these Gentlemen I can't mention, without making an Apology for not Publishing our Annotations on his Enquiries relating to Cancers, which was promis'd at the latter End of our Chi rurgical Remarks, Printed above a Year ago; but I affire you Sir, I was more inclin'd for some Reasons to offer what is therein contain'd, with feveral Observations made with the greatest Exactness, and to which, perhaps I may have an Opportunity of making feveral Additions, in a particular Treatife, so that the whole may conspire to finish a compleat Account of this Disease. I had at first a Design of enlarging confiderably on this Subject in this Letter by adding various Things, but confidering they might better find a Place in what I just now mention'd, and that you did not defire an exact History of the Disease, I resolved to omit them. I shall now proceed to give you fome Instances of the Success of our Method, as being what you are most solicitous of, the Cases

on that proposes a Cure. But because Perfons generally find some Relief by Opiates, as they retard the determin'd Motion of the Blood, straiten the Nerves, and check the tumultuous and disorderly Influx of the Spirits; fo, probably, in these Cases, their Use will be continu'd. Besides the acute Pain, the Cancer was over-spread with fungous Flesh, its lower Part extreamly hard, knotty, blackish, and its Basis feem'd inclinable to fix; the Matter which was discharged was thin, reddish, and stank abominably. This was the Condition of this poor Woman, when we first apply'd our grand Dissolvent; the Pain she was attended with the first and second Day after was inconsiderable, nor did she complain of more afterwards, then would have been procur'd by the most mild and easy Remedy the Dispensatory affords. In four Days Time we found a very evident Alteration for the Better; for the Confistence of the Matter was changed, and the Surface of the Cancerous Mass became somewhat foft, we continu'd the Use of the fame Medicine, and in a few Days more some Part of the Cancer came away with the dreffing. In fhort, in about Six Week time, the whole Substance was entirely gone, and nothing remain'd to be don but to heal the Ulcer, which was effecte in about a Fort'-night. During the Tim

fh

she was under Cure we gave her a proper internal Medicine, not calculated to destroy the Acidity of the Blood, but to dispose the whole Cancerous Mass, with its Appendices to come away, which might otherwise, as the Seeds of the Disease, cause it to spring again, thus was this Patient, after so great a Fatigue she had undergone before she came to me) perfectly Cur'd, and has continu'd so to this Time, without any manner of Inconvenience as she lately told me, it being a long time since she has been well.

A Gentlewoman near Fifty Years of Age, by some Accident receiv'd a Blow on her Left Breaft, which in a few Days was succeeded by a considerable Tumor, whereupon she apply'd her self to a Surgeon, who imediately let her Blood, ordered her to take the Lap. Hibern in Posset-Drink, and embrocated the Breaft with Ol. Succini: By the Use of these Means the Swelling was much abated, a small Hardness only remaining, which didn't exceed a fmall Wall-Nut in Bigness, in this State, with very little Pain, she continu'd above a Year; but being perfuaded to apply an Emp. de Ran. cum Mer. to it, it encreased very apparently, was extreamly painful, and in Seven Months time became as big as a large Egg: After this

this she made use of a Woman who was reputed Famous for these Cases; but by One or Two of her Applications the Tumor became as big again as before: In short, it continu'd to encrease gradually from that time, till the whole Breast which was of a monstrous Bigness, and which was judged not to weigh less than Eight Pound, in time became entirely Cancerous. It was at this time that I saw it, the Skin was very Livid, looking fleek and shining, and feem'd ready to open, as being scarce capable of longer containing fuch a prodigious hard Mals as laid conceal'd under it, and was in all Probability as big as the Breasts of the Ammonian Women, of which Juvenal thus speaks. In Merce, crasso ma. jorem Infante Mamillam. She had been with various experienc'd and reputable Surgeons before, among which was One not long ago diseased, who was justly look'd upon as an Ornament of hisProfession; but not One would willingly attempt a real Cure by cutting it off, or any other Way: They only prescrib'd some palliating Remedies to remove the Pain and prevent its Breaking. I was animated by my former Successes, and prevail'd with my self to undertake it, not thinking I was at all blameable if my Success in so extraordinary an Affair contradicted the Prognosticks of fo many worthy Gentlemen; and the' it did

did, I shall at all times think my self obliged to pay a Defference to 'em. I began the Cure by removing the Integuments from the upper Part of the Cancerous Substance, but did not wait for a Separation of the Slough the Escarotick made for fear of being incommoded in my Proceedure by a Fungus; For this Reason I mix'd some of our Dissolvent with a digestive Ointment, by which Means I had a Part of the Cancerous Mass came away with it, without any Trouble to my Patient I continued this Method of Dreffing several Days longer, with very little Alteration; but upon a Complaint of a Pain between the Shoulders, I was obliged to change my Medicine, and foment the Cancer with an infusion of some of those Herbs that contain many Volatile attenuating and active Particles And here I can't but remark, by the by, that Applications to the pained Part would have been of no Effect, as I have many imes observed, and particularly in a Woman which had a Cancerated Breast, that was violently afflicted with a Pain in her Arm on the same Side, which would not be removed by any of the Applications he Person that had the Care of her made ise of the affected Arm. To this I might ubjoyn a very pertinent Case from Galen; out I fear I shall digress too far. The Pain

of my Patient's Back being removed, I proceeded to apply the Dissolvent, which so soft ned the Superficies of the Cancerous Mass, that in Three or Four Days Time I cou'd take off above a Quarter of a Pound of it with the Edge or Back of my Incision Knife, and my Patient not so much as feel me, this I continu'd to accustom my selfto, because 'twould have been more tedious to have waited for the coming away of the Cancerous Mass of it self. Sometimes I varied my Applications as I faw Occasion, but as my Patient confess'd, I scarce put her to any more Pain during the Timeher. Breast was dissolving (abating for the Pain of her Back) than there is in the dreffing of an Issue. The prodigious Bigness of the Cancerous Mass made the Cure the more tedious; for twas above Three Months before all of it was entirely diffolv'd and gone; but this being at length furprifingly and very happily effected the Cancerous Ulcer (the last Part of the Cancer that came away left) was incarn'd and cicatriced by an Infusion of vulnerary Herbs, to which was added a small Quantity of Tincture of Myrrh, thus was this Cure entirely compleated and my Success in it confirmed that French Proverb, which fays, 'Tis better to be condemn'd to Die by the Doctor, than by the Judge. I did not make use of that internal Medicine I mentioned in the former

former Case, because here I found no pressing Necessity for the Use of it, but some other proper Physick was taken to difpose the Ulcer to heal, as one would have done in any other Case Upon the whole of this Cure, I cannot say whether I had more Trouble with the Cancer, or in endeavouring to oblige my Patient to a strict Observance of some of the Non-Naturals The so often err'd in. There's nothing can create a greater Trouble to the Surgeon, than to find Patients negligent of their Healths, by not endeavouring to prevent or regulate Miscarriages, nor taking so much Care of themselves, as they expect the Surgeon should take of 'em. The Rules and Directions of Physitians and Surgeons, given to their Patients, we have Reason to believe were not so often violated formerly; for in some Places they oblig'd themselves very strictly to the Observance of'em, and some Historians give us an Account that Selucus made a Law, that if any of the Epizephyrian Locrians drank Wine, contrary to the Physician's Direction, tho they escaped the ill Consequents that might have attended it, Death was their Punishment, because they did contrary to what was prescribed them.

Cured

A Woman about Thirty Years of Age had been for a confiderable Time afflicted with a hard painful Tumor under her Tongue, for the Cure of which the had apply'd her felf to various Persons, but without Success. When I sawher, I found the swelling to be hard, painful, of a livid Appearance, and incommoded her so much in speaking, that she could not pronounce herWords articulately. I was of the Opinion of some Gentlemen that had seen it before me, viz. That it was undoubtedly Cancerous, and as fuch I proceeded to the Cure of it; but I met with more Difficulties in this Case than I at first expected, for after I thought the Cancerous Substance had been entirely dissolv'd, and I had reduced the Ulcer to a very narrow Compass, it began to swell again, and in a short Time enlarged it self to almost the Bigness it was at first: This put me upon a Necessity of making an Incision into the Body of the Tumor, that I might commodioully come at the remaining Part, and fo dispose some little Dossels of Lint, arm'd with our Dissolvent, that they might have their desir'd Effect, and this in every Respect answer'd what we proposed; so that we proceeded imediately to incarn the U1cer, which we did by a Lotion prepared of an Infusion of some vulnerary Herbs, and Mel Rosar. Thus was this Woman perfectly Cured,

(27)

Cured, and has continu'd well about a Year.

Because I have always found greater Difficulty in treating Cancers of the Mouth and Lips than those of the Breast, I'll here relate an Instance of One upon the lower Lip that prov'd extreamly troublesome. It sometimes happens that One, or more, of those Glands which are spread on the Infide of the Cheeks and Lips, called Buccales and Labiales, receive some Damage by a Bite or Blow; upon which they generally tumefy very much, become painful, and in Process of Time (if proper Means are not made use of) may become Cancerous. Such was the Case of a Woman about Thirty Years of Age, who having had a Blow on her lower Lip, neglected it till it was confiderably tumefied, grew very painful, and became extreamly troublesome to her. The Circum erence of the Swelling when I saw it, which was many Months after the Blow was received, was very much inflamed, and a small Quantity of Icorops Matter discharged from several small Pustules. which over-spread it; the Middle, which was the Body of the Cancer, was hard of a whiteish Colour, and moveable; its Sides being only connected to the contiguous Parts by some small Filaments that were .ved. detach'd

detach'd from it. The fame Thing Doctor Gendron has discover'd in an ulcerated Cancer on the Forehead of the Servant of a certain Marques, as he observes in his Third Chapter of the Tract we have before mentioned. I began with my Patient by applying cool and temperate Remedies, till the Inflamation was confiderably abated; after this I apply'd our Dissolvent, which operated so mildly that my Patient was not sensible of near so much Pain as before she was apprehensive of: In short, the Body of the Cancer was removed, and a good digested Matter discharged from the Sore. Now all the Difficulty was after what Manner we should proceed to dispose the little Cancerous Branches in the Skin to come away, but this we effected after the following Manner; the Confiftence of the Medicine we before apply'd, was fuch as was no way qualified for rooting out the the Cancerous Filaments, whereupon we were obliged to procure its Dissolution in a proper Menstruum, tho' it required a considerable Time to do it; by this means, we foon found, that what before wasineffectual was now capable of effecting what we defired. This being done, the Ulcer was incarned by aSarcotickInfusion(for I never useOintments in these Cases) and cicatrized by the common drying Plasters. It's to be observed,

ved, that the Scar still continues hollow (it having been heal'd near Two Years) and not like those that are the Consequents of well order'd simple Ulcers.

The following Observation contains an Account of One that was cured of an incipient Cancer in her Breaft, by Internals. I was the rather inclin'd to fet down the whole Process of this Cure, because by thefe, or such like Medicines, Persons under the same Circumstances may perhaps be cured, tho' by somethey may be thought incurable. The Case is this; A Gentlewoman, Thirty Years of Age, of a thin spare Habit of Body, by some Accident receiv'd a Blow upon One of her Breafts, which put her to an immediate Pain, and that very acute; but it lessen'd upon her being let Blood, and the Application of a discutient Plaster: However, in a few Days, some of the glandulous Grains of the Breast became indurated, and in Process of Time, by their Increase, they were rendred painful. At this Time she fought out for fresh Advice, and continu'd Two Months under the Care of a Person she was recommended to; but Things not succeeding according to Expedation, she became a Patient to Three or Four more. During this Time the Lump continu'd to encrease

(30)

encrease but slowly, and at the Expiration of Six Months it appear'd to be a very hard painful Tumor in the Middle of the Breast, but no bigger than a Hen-Egg; whereupon 'twas thought proper to commence her Method of Cure by exhibiting the following Pills. B. Pill. Tartar. Quercetan 3 ss. Calomel gr. 8. F. Pill. No. 5. These were likewise continu'd twice a Week during the whole Cure; after this, was order'd the following Infusion. Be Vin. Rhenan. thii. Milleped 3ii. Ocul. Canc. 31s. Croci. 3ii. This was not to be taken alone, but when it had stood Four and Twenty Hours, three or four Spoons-full of it was to be mix dwith a Draught of the ensuing Dietetick-Drink, and taken in the Morning, and at Four of the Clock in the Afternoon. B. Rad. Sar-Saparill. 311 Chinæ 3 vi. Lig. Sassafr. 31. Corn. Cervi, 31. Sem. Correand. 31s. Sant. Rub. Sii Ceq. in aq. Font. Congiis 4 per Hora dimidium, deinde stent Claule super Cineres Calidos per Horas, Xii; postea ebuliiant ad tertiæ Partis Consumptionem. By the Continuance of these Means about two Months, and observing a regular Method of living, the Cure of this Patient was effected; tho by fome the had been look'd upon as incurable, unless the wou'd fubmit to the cuting it out, which is not often attended with Success, and one one Perhaps,

Perhaps, Sir, here you may object, that it is acting difengenuously, and not like a Friend to give you an Account of those Persons only where I have succeeded. To this I answer, that excepting one Woman, that was emaciated almost to the last Degree by the excessive Discharge of a fætid Icorous Matter from her Breaft, and an Abscess under her irm, and who was carried of by a violent Loosness, I never had a Person miscarried under my Gare, where I propos'd a Cure. That poor Woman I fuffer'd my felf to be perfuaded to take care of, having but little Prospect of effecting it, yet my Endeavours succeeded so well, that had it been in our Power to put a Stop to her Loosness, I am of opinion the might have been cured.

What has been hitherto said, I do not question but is sufficient to satisfy you, that this formidable Disease is not so rebellious, but that it may be sometimes conquered by Art; and I might here relate a Case I have at this present Writing, wherein not only a Part of the Cancer was fix'd, but there were hard Cancerous Knots extended to the Arm-pit; and yet this seems to be almost well; the Ulcer that remains, and which heales daily, not being much broad-

(32)

Patient is not entirely cured, I shall reserve this Relation 'till another Opportunity; tho' I will embrace the Present to assure you that I am,

(35)

Problem I.

Whether the Cancerous Juice is Corrosive, or not:

E can't come to a certain Knowledge of the Principles of the Juice which is lodged in the Cancerous Substance, altho' it enjoy'd the very same Properties, of that which is discharged from an ulcerated Cancer, from the Account which Authors have given of the Latter; for they have differ'd very much in determining the Nature of the Salts, with which they suppose it abounds. Helmont, Van Horne, and most of those Gentlemen that were Chimically inclin'd, were of Opinion they belong'd to the Alkaline Family, but afar greater Number than those, have thought they are Acid. Riolin, the Father in his Vide Rio-Chirurgical Works, without givlanus Cap: ing his Opinion what the confti-13. Sect. 2. tuent Parts of the purulent Matter are, af-E z firm'd

(300)

firm'd it to be as strong as Poison, and that no Death could be devised too cruel for fuch a One as shou'd give it to a Man. This brings to my Remembrance an very unhappy Accident a Gentleman inform'd me of that befel Mr. Smith, one of the Surgeons of St. Thomas's Hospital, who being so curious as to taste the Juice of a Cancerated Breast presently after it was extirpated, found himself very strangely affected by it, in a very short Time; he washed his Mouth with various Things, but nothing could free him from that penetrating, malignant, and naufious Savour, he was continually attended with; in short, he became Consumptive, and in a few Months died a Martyr to the Art of Surgery. I confess, when I receiv'd this Account it did not a little surprize me, because I had several times had the Curiofity to do the very same Thing: at the Hospital where that unfortunate Gentleman made the Experiment. I never found any remarkable Sharpness in it, tho' twas always attended with a very unpleasant Savour. I proceeded at first very cautiously in making this Attempt; for I diluted some Drops of the Juice in several Spoons-full of fair Water, till at length, not finding any Inconvenience from it, I came to the Juice it self. We can't imagine the Death of that Gentleman before-mention'd, was procur'd by the Action of any corrolive Salts, whether Acid or Alkaline, which would have caused a Corrosion of the Parts; but that its only accountable from the extraordinary Stench and Malignity of the Matter, which impressing its Virulency on the Animal Juices must undoubtedly disturb their regular Motions, and cause the utmost Confusion of the whole Æconomy. It must certainly be a very tragical Scene, to observe how Nature, by so inconsiderable Means, confounds and infults over the Animal System; but still there is nothing we are more certain of than that her Method of Procedure is always confistent to the Rules sheacts by. Since the writing of this, looking over a little Tract which informs us of the Rarities in New-England, I met with a Relation which discovers to us the peculiar and odd Quality of the Juice of a Cancerated Breaft, or Wolf, as our Author calls it. He tells us that an indulgent Husband, by fucking his Wife's fore Breaft to draw out the Poifon, lost all his Teeth, but was attended by no other Inconvenience. Now this does not prove that so strange an Effect should fucceed the fucking the Ulcer, because of the Corrosiveness of the Matter, for had it been so, such tender Parts as the Gums, Lips, and Tongue, could not have escap'd fo

deduces his Experience from an Observation of a poor Woman, that having an ulcerated Cancer in her Breast, and lying with three Children, they were affected after the same Manner by the Contagion. He says that Two of 'em died; but the Third, which was of a stronger Constitution, had the Cancer cut off by

a Surgeon and was cured. Senneretus is of Opinion that these Chil-

dren did not contract the Disease

Vid.Sennett.

ad Part.
1 Cap. 19.

by Contagion, but that it was by Hereditary Succession. We likewise find that Cardan. Lib. de Venen. Cap. 12. is of Opinion that Cancers are not contagious. However, we'll not make any particular Enquiry into these Authors Reasons, when they fo strenuously maintain this Point; but only relate a remarkable History, which will prove the contrary, if the Cancerous Matter comes to an imediate contract with a fost and glandulous Part. The Relation I had (some time ago) from a Gentleman not long fince deceafed, who, out of a pious Disposition, had devoted himself for several. Years last past, to be serviceable to the greatest Objects of Charity. He inform'd me that a Tradesman's Wife in Nottingham, being so unhappy as to labour under a Cancer in one of her Breafts,

Breasts, her Husband was of Opinion he cou'd relieve her by sucking it; accordingly he put this Method in Practice, in hopes without doubt he cou'd effect a Cure, by drawing the Cancerous Matter out of the Nipple; he continu'd his Attempts for some Time, but found it did not answer his Defign; for tho' a small Quantity of Matter was discharged this way, the Disease still became worse, and she terminated her Life foon after. Two Months were scarce expir'd before the Husband of the Deceased came up to London, upon Account of a fwelling he had arose on the Inside of the upper Jaw; he apply'd himself to some ingenious Surgeons for Advice, who affured him he must undergo the drawing of several Teeth on that Side of the Jaw which was affected, and have the Swelling, and Part of the Jaw-Bone (if necessary) cut away; he went away very much difatisfy'd with fo harsh a Proposal, and became a Patient to a Person, who undertook to cure him with Gargles, and such inconsiderable Remedies; however, by the Use of these Things he was of Opinion he became much better, and thought he should be cur'd. Upon this he retird into the Country to his Business, but in less than a Month's Time he was obliged to come up again, and have the former Method

(41)

Method put in Practice. But the Event was according to that Expression

of Galen, Quibus item sunt Cancri Vide Galen, in cavitate Corporis, aut Palato, sede Com. Lib. 6. utero, si secentur, aut urantur, Ulce- Aph. 38.

ra cicatrice induci non possunt. For

the Sore could never be brought to Cicatrize, but the Cancer continu'd to spread, till it had extended it felf over most of the internal Parts of the Mouth, and to the inner Part of the Nose: In this unhappy Condition, he liv'd some time, but at last became so frightful an Object, and the Stench that continually proceeded from the Parts was so offensive, that he retir'd himself from the World, and finish'd his miserable Life in a Garret. Since the finishing the Solution to the foregoing Problem I met with a Surgeon (a Forreigner) who giving me an Account of the present State of the Practice of Surgery in the Country where he liv'd, and relating some considerable Cases which had happen'd within his own Knowledge, in answer to my Desire, among other things, told me, without any particular Intimation from me, he knew a very odd Accident, which happen'd upon a Woman's having an ulcerated Cancer in her right -Breast, which was, that she being poor, for want of other Conveniencies, suffer'd EWO

two Children she had to lie with her in that Condition; at length one of 'em, a Girl about five Years old, began to be afflicted with a small painful Tumor in one of her Breasts, which encreasing to near the Bigness of an Egg, became Livid, and' entirely Cancerous; the Mother died some time after, and the Child did not long survive her; but the other Child continu'd well. Several Surgeons gave their Sentiments of this Case; some thought it to be an Hereditary Indisposition, but considering the Mother had no Appearance of a Cancer before, or at the Birth of the Child, I cannot but readily embrace the Opinion of those Gentlemen, that were inclin'd to believe that it was contracted by Contagion, seeing the Position of the Child's Body was such in Bed, that Part of it which was affected was almost always disposed to rub against the Dressings soaked in Matter; (for I understand the Mother took but very little Care to change them often.) Now it is not at all probable, that the maligant Effluvia, which continually pass off from the Cancerous Mass, and the putrefied Matter, can dispose a Person at any little Distance to be affected with the like Disease, for then the other Child wou'd have became a Sufferer; but it may happen in some extraordinary Cases, where the

the corrupted Fluid has attain'd an exalted Pitch of Malignity, to communicate some of its more active Particles to the Blood and Spirits; and so causing a very great Disorder in their Motions produce a violent Feaver, and Confusion of the whole Oeconomy, so as to occasion a Person's Death. But see a remarkable Case in Tulpius, Lib. 4. Obs. 8. That there are several cutaneous Diseases that may be propagated by Contagion, if a Person lies with another, is by all allow'd of; and that the lying with a Person that has a Cancer may be attended by such a Disease; from the Proofs we have brought, I suppose will be agreed to be equally as certain; but this cannot happen unless the matter be very malignant, and be suffer'd, by the Negligence of the Patient, to come to an imediare Contact, with a Part of the Body of the other Person; for then, withoutdoubt, it may contuminate the Fluids, and incline 'em to assume a Viscidity, to which the Effluvia will imediately adhære, because they are best qualify'd for a Union with those Substances that are viscous. To this we may add, that in those Persons that are nearly related, the Malignity may be more easily communicable because of their Analogy to each other; for consonant hereto, Diemerbroeck says in his Treatise of t be WW.

(44)

the Plague, that Kindred more easily receive the Insection from one another. But see Vide Diemer more in that Author's excellent brockdePest. Book where you have likewise some curious Thoughts relating to Contagion.

Podlem III.

Whether if the extirpating a Cancerous Breast happen; to be
successful, it ought to be look'd
upon as a Consequent of Performing the Operation better than our
Predecessors.

BY the Account we receive from Authors we can't be positively assured, whether there was any particular established Method in the first Ages of this Art, for the Performance of this Operation: This we are only affured of, that there are some Circumstances which relate to it, that have been taken Vide Ætius Tetrab. 4. Ser. 4. Notice of; the most conside- Cap. 44.

rable of which is, that the actual Cautery was to be apply'd imediately after the Abscission; this they advised, not only to put a Stop to the Flux of Blood, but likewise to correct the ill Quality of it: Tis to be observ'd, that they order'd always, upon fuch an Occasion, Defensatives to be apply'd to the contiguous Parts, to prevent their being inflamed; but for as much as they were sensible the actual Cautery would procure an Eschar, they recommended the Use of Digestives to seperate it; after which, they propos'd to heal it as a common Ulcer. The very next Advance this Operation receiv'd, that we have met with, was rent onn

Franciscus Arceus, who oblig- Vulnerib:
ed the World with an exact

and methodical Account of the whole Method of Proceedure in extirpating a Cancer in the Breast; tho' this Author wou'd only venture on those that were not ulcerated, those that were he look'd upon as incurable, we don't find that this Method was recommended to the World by any remarkable Histories of Cures effected by

it; whether it proceeded from the Unfuccessfulness of the Attempts, or its Disuse, we can't determine. Fabritius Hildanus likewife made a confiderable Step toward the Encourageing the Performing this Operation; and he assures us, he has more than once done it with Success; he did not only influence his Contemporaries to revive an Operation, that was, perhaps, almost grown out of Date, by the Histories of some Cases he recites; but obliged them with the Figure of a Pair of Forceps, which in this Operation are very convenient to engage the Breast, and thereby prevent the Pain the Patients are sometimes put to, by piercing the Breast with Needles arm'd with Silk to suspend it. There are feveral Ways of performing the Operation, mention'd by latter Practitioners, but at this Time there are few that are willing to be concern'd in it. A very confiderable Author speaking of extirpating a Cancerous Breaft, advises us to take care we don't cut the Pectoral Muscle in the Operation is But we have seen a very remarkable Case of this Nature, where a Part of that Muscle was cut away, and the Cartilages of Two of the Ribs laid bare, and the Patient happen'd to be cur'd. Now if our Predeceffors had so great a Respect to the avoiding the wounding of this Part, as to make

their Incisions too superficial, their Operations must be in all Probability unsuccessful; for we are very well affured by Experience, that their actual Cauteries will have no good Effect here, nor will they consume the remaining Part of the Cancerous Maß We have elsewhere show'd, that this Substance upon boiling becomes hard and friable; and we will here take the Liberty to give our Opinion of the Use of Cauteries in this Case. The Cancerous Substance we take to be nothing more than a Transformation of the small glandulous Bodies, which form the Breast, and a Lymphatick Juice, intimately incorporated therewith, into a hard, close, whiteish, and (by common Medicines) indisfolvable Maß. In some Cases, perhaps, it may receive some Addition from some Juices, which may distill from the contiguous Fibres. This being granted, what Benefit, can we reasonably imagine, will ensue on this painful Method? Will not the Fire, by causing the more Fluid Parts of the Maß to evaporate, actually dry up, torrefy, and harden it; and so dispose it for displaying a Train of mischievous Effects, on the contiguous Parts? and all this without any very apparent Decrease of it too: Nay, the very reducing of it to fuch a Confistence, which very much resembles a Piece

(48)

Piece of burnt Horn, is sufficient to procure a perpetual Pain, seeing Medicines can hardly soften it, so as to reduce it to its sirst State.

od Effect here,

Poblent IV.

Whether a Salivation will Cure a Cancer.

THE extraordinary Success this Method has been attended with, in some Cases of the greatest Difficulty, has to far recommended it to the World, that ir's at this Time become of so great Repute, that there are few Persons but what will willingly embrace it, if proposed to em, provided they have found former Methods prove ineffectual. We once knew a Person, who labour'd under an ulcerated Cancer in her Breast, advised to it, and who had certainly under-gone it, tho' contrary to the Opinion of some Perfons concern'd, if in Three or Four Days, Time she had not been reduced to such a weak Condition, that it put an End to the

(49)

the Controversy. That a Salivation has cur'd the most malign and spreading Ulcers, and those that have been of several Years continuance, notwithstanding their Edges have been high, inverted, and affum'd the Confistence of a callous Body we have found by several Instances; but that it should cure a Cancerous Ulcen, an Ulcer which is chiefly seated in a transform'd animal Substance, and which has no Correspondence with the contiguous Parts, is what we can't believe. One of the principal Effects of Mercury, if prudently given, is, that it attenuates the Juices, clears the Canals, destroys the ill Quality of that Fluid that has a Hand in causing any Obstruction, and renders the Juices temperate and sweet. By effecting this, it is, that it cures fo many different Diseases, which perhaps have not so great a Diversity in their Causes, but have different Appearances, which depend upon the Variety of Parts, where the Cause operates. From hence any One may judge, that a Person who discovers a certain Method of curing Cancers by Medicines only, will find that it will not confift in a Secret for purifying the Juices, which can have no Effect on the Cancerous Maß, fo as to procure its Dissolution; and without a Remedy for which his Method will be always unsuccessful. Merckling

lin, in his Treatise de Transfus Sanguinis, Pag. 35. tells us we have no Reason to believe we may have Success from Transfusion in a Cancer, nor indeed would Injections succeed better; tho', perhaps, by this Means, it's possible so to alter the Fluids, that Ulcers, not Cancerous, may be curd in a short Time, as it once happen'd to a certain Person, who being under Cure for an inveterate Pox, had some Rosin of Scammony infused in the Essence of Guaiacum, injected into his Veins, which Vomited him excessively; but his Ulcers were heal'd in three Days Time. From what has been hitherto said, it's evident, that a Salivation can never cure a confirm'd Cancer, because it's not capable of procuring a Dissolution of that hard Substance, which is the real Cancer it self. The Glands we have obterv'd, with the extravalated Lympha, and its Vessels, are perfectly changed to a different Substance to what they were before, all which make a Maß of fuch a Nature, that it will be impossible to procure its Dissolution by any inward Means If the Cancer was nothing more than a Coagulation of the Juices in the Vessels, or other Canals, or Pipes, the Cure might be much more easily effected, but as the Cancer is conjoyn'd with fuch Circumstances as we have mention'd, we may affirm the Cure

(51)

will be altogether impossible without the whole Substance with its Appendices or Branches (which we have found they often have) be taken away; or a perfect Dissolution of all of it be procured by some external Remedy, which is capable of operating on it after such a peculiar Manner, as to dissolve the Cancerous Substance, without having any such Effect on the contiguous Parts.

Problem V.

Whether Cancers are Curable by Causticks.

HE Difficulty that those of our Predecessors who had Courage enough to attempt the Cure of Cancers, must unavoidably meet with, oblig'd them to enter upon several Methods of Practice, in order to be capable of furmounting it; and there have not been wanting for these several hundred Years last past, some Gentlemen in the Republick of Medicine that have proposed to Conquer this Rebellious Disease, by the use of some particular Causticks, they have recommended. Its foreign to my Design, to give an Account of the Composition of the several Remedies, they have been big with the Expectation of Success

Success from; I shall only take notice of one or two not very pompous Preparations, that by fome Persons I know, have been look'd upon as extraordinary as any that have been transmitted to us. Guido, who I think I may justly say is one of the best Authors of so ancient a Date, has been very lavish of his Encomiums, on Arsnick, and after him Fallopius, Rodericus a Castro, Osenius, Penotus, Faber, Borellus, and others, have recommended in it in some particular Preparations. That of Fuschius, who is faid to have cured abundance of Persons of Cancers, in England, Germany, and Poland, having had the most said in its Commendation, requires our more particular Notice; Hartman calls it Pul Benedictus, which whether it deserves that Title, we'll leave to the Reader to Judge, after we have faithfully recounted the Effects of it. Its Preparation is as follows. Be Arsenici albi 31 subtilissime pulverisetur per dies 15 de die tertio in tertium affundatur Aq. vita, ut cooperiat pulverem, post triduum Aq. vitæ abjiciatur, ac nova affundatur, ac misceantur. Rad Dracunouli Major, mense julio vel Agu. collect et in taleolas scisse ac in loco ventis perflatili exsiccata 311 Fuliginis Camini splendidi Zili redigantur omnia in subtilissi. mum pulverem super lapidem marmoreum, et servetur in Vase bene clauso vitreo. Ante annum vero ad usum non erit ita commodus. This Powder

Powder I apply'd to a Cancerated Breast of a Woman, under thirty Years of Age, after having made a Sore by applying one of the milder Causticks, the first Night it was made use of, it caus'd a great deal of pain, and the next Day, the Breast appear'd very much tumefied and inflam'd, a small quantity of Gleet, having discharg'd on the Bolster, in short for sifteen Days she was not free from pain, she had a Fever, was attended with frequent Vomitings, Faintings, and several other Disorders. I cou'd afford her but very little Relief by internals, or the most cool and temperate Applications to the Breast, nor was it in my Power to remove the dreffing, it adhæred so fast to the Sore. There was a Discharge of a bloody serous Juice for twelve Days in a moderate quantity, after which the Matter thickned, and it began to smell somewhat offensive, at the end of fifteen Days the Dreffing drop'd off, and and with it came away about two Ounces of the cancerous Mass. The Reader may easily imagine that making so small a Progress in such a time, and that at the Expence of so much Pain, I cou'd easily prevail with my self to desist from the undertaking, for the second Application wou'd have been attended with the same Inconveniencies as the first, which to any Perfon that entertains fuch a concern for his Patients

((54))

Patients as he ought to do, must be very fatigueing; in short, after this I made use of that Remedy I have elsewhere mentioned, and which from its Effect we properly enough call a Diffolvent, with this by the Bleffing of God the Cancerous Substance was confumed in about three Weeks, and a perfect Cure compleated in not many Days after, the Patient which I faw lately continuing perfectly well, it being the first Case that ever Providence directed me to the use of the Remedy in. Hildan. Has an Observation very pertinent to what we have before related, he tells us, that the Powder so much celebrated by Penotus, and which is much the same with that just now mention'd, being apply'd to a Caneer, was succeeded by such ill Symtoms, that it Kill'd the Patient in a few Days. We are inform'd in the communicated Observations of Riverius, that a Foreigner extirpated a Cancer, that had began to Ulcerate in the Breast of a Woman of Fifty Years of Age, by the following Application. Be Arsenici 3i Salis Armoniaci 311 sublimat crud 31111 Aq. Fortis 31 These were to be distill'd to Dryness, then an equal Weight of distill'd Vinegar put thereto, which was to be distill'd again, till the remaining matter became of the Consistance of a Paste. The Surgeon bath'd the Cancer with hot Wine, and rub'd it with

with Cloaths for some time to irritate it, then he fpread fome of his Composition on a Bolster fix times less than the Tumor, and apply'd it; in twenty four Hours time, it made a Escar as large as the Swelling, fo that it wholly confum'd the Cancer, after the Separation of the Escar he incarn'd the Olcer and cicatrized it. Its very ob-fervable, that he didn't engage in this painful Process, without immediately caufing a Fever, which was attended with a Vomiting, Loofness, and much Provocation of Urine, which Simptoms lasted two or three Days, for Nature was diforder'd by the destructive Quality of a venemous Remedy. Paracelsus, Faber, and fome others, make mention of Arsenical Preparations, that procure but little Pain in their Operation; I had a Delign of making a Trial of some of these Remedies, had I not in my Enquiries met with what was very satisfactory to me, tho' after knowing what I have related, I shou'd have always cautiously avoided the use of any Remedy, in which the Arsnick had not undergone such a Preparation as I shou'd have approv'd of, because I am affur'd it may procure very mischevious Symptoms, tho' in Substance, it do not so much as touch the Skin, witness the Amulets, in which it has been the chief Ingredient, and of which there have been fuch

fuch direful Accidents related by Crato, Massaria, and Zacutus Lucitanus. I don't think it impossible, but that Arsnick may be prepared after such a manner as may by the addition of some convenient Body, or depriving it of its noxious Particles qualify it for effecting uncommon things in the Cure of this Disease, without causing the Surgeon to repent the use of it. I remember that Helmont somewhere says one may easily enough correct several sorts of Poisons, so that they shan't be depriv'd of their Force, when we destroy their Virulency: Many Instances of this Nature we meet with in Mr. Boyl, and some others; but that which makes most for my present purpose, is, what is mention'd by the last Honourable Gentleman, of a very ingenious Man he knew, that was famous, as well for his Writings, as for a Remedy to cure ulcerated Cancers in Womens Breasts, without any considera-ble Pain, he assured our Author that his Medicine was indolent, and mortified the ulcerated Parts as far as they were corrupted, without disordring the Party, and this Remedy it seems partly by the Confession of the Gentleman, was reasonably enough suppos'd to be a Dulcification of Arsnick; one wou'd think that the mention of this very Remedy, with Monsieur Alliers, and that recommended in the preceeding

preceeding Letter, shou'd be sufficient to influence the inquisitive of our Profession to farther Enquiries, which must be certainly an Undertaking, worthy the noblest Spirits. To conclude, we can't fay, but there are many Cancers that may be cur'd by Causticks, but the Person that is to undergo it, may very well answer, as a certain Patient. did, who's Thigh was to be cut off, Non est tanto digna dolore Salus. The Preservation of Life would be too dear bought at the Price of so much Pain. This puts me in Mind of what is related of Galienus the Emperor, who it seems had for a considerable time been very grievioully afflicted with a Sciatica, a certain Physician undertaking to cure him, perform'd indeed his Promise, but nevertheless made him undergo a thousand painful Experiments; whereupon, the Emperor one Day sent for, and thus said to him, Take Fabatus two Thousand Sesterces, but withal, be inform'd I give 'em not for curing my Sciatica, but that thou may's never cure me again.

Problem VI.

Whether Cancers are Curable by internal Medicines.

by Cauthicks, but the Porlon that HO' this Problem at first View, may feem to be too near Allied to that which proves the Impossibility of curing cancerous Tumors, whether ulcerated or not, by Salivation; yet in regard there are some Persons, that tell us the Disease is superable by some internal Remedies, which operate after a quite different Manner, to those generally given to procure a Salivation, we shall enquire into one of the most considerable of 'em, related by a Person whose Memory we have a very great Value for. And we shall the rather take Notice of this particular Remedy, because we have elsewhere spoke of the Success of it. Twere no very difficult Matter for me to mention feveral internal Medicines, out of our Chirurgical Writers, more especially those that have been Favourers of Chymistry; but I shall purposely decline it, because to speak freely, I suspect that most of the Remedies, tho' much has been faid in their Praise, have not been sufficiently examin'd by those that recommended them.

this we may add, that had the Authors of 'em consider'd the vast Difference there is to be observ'd in Cancers, they wou'd not have fo fuddainly and positively determin'd, that their Medicines were of use in these Cases in general; seeing we must have regard to absolutely different Intentions, in those that are not ulcerated, and those that are, and those that are a hard Tumor, and those that are flat, and likewise when they are conjoin'd with Circumstances, which are often enough to be met with. The Honourable Mr. Boyle in his usefulness of experimental Philosopby, tells us, that he was inform'd by credible Persons, of a certain English Woman above fixty Years of Age, who had lain long indispos'd with a Cancer in the Breaft, in an Hospital in Zeeland, and was by Doctor Harberfeld, with one fingle inward Remedy perfectly cured in three Weeks, the Relation was made by a Doctor of Physiek, who was an Eye Witness of the Cure, and another Person who not only faw the Cure, but knew the Woman before, and out of Charity, carried her to him that heal'd her. Our Author was inform'd, that the Chimical Liquor the Doctor constantly made use of, does in the Dose of about a Spoonful or two, work fuddainly and nimbly enough by Vomit, but hath very quickly ended

ended its Operation, so that within an Hour, or less, after the Patient has taken it, he is commonly well again, and very hungry. He adds, that having some of the Liquor presented him, he found the Taste to be offensive enough, and not unlike that of Vitriol, which by the Taste and emetick Operation, was guess'd to be its principal Ingredient, the Relators assur'd our Author they had been in England, as well as elsewhere partly Eye Witnesses, and partly Performers of wonderful Cures by the help of it alone, under God, in the King's Evil, infomuch, that an Eminent Gentleman of this Nation, hath been cured by it, when that Distemper had brought his Arm to fuch a pass, that the Surgeons had appointed a time to cut it off. Now, who is there, that upon reading this Account wou'd not think the Doctor a very happy Man, that was Master of so valuable a Secret; but alas! How fatisfactory wou'd it be to the World if the hundredth part of the Remedies that have been handed down to us, had a Power of effecting those things that are ascrib'd to 'em, without being attended with any ill Consequences. I assure you, Reader, I have made use of this very Remedy, for fince I mention'd it as the Doctor's having great Success from it; I met with the true preparation of

of it, as 'twas communicated to Sir Kenelm Digby by Doctor Havervelt, or Harberfield, for the Cure of Cancers, the Kings Evil, and old Ulcers. It is as follows. Be Dantzick Vitriol, calcine it till it be yellow, then grind it with Salt, or Salt Petre, the ordinary proportion with this Sublime Mercury which Sublime once again by it self, then take only the Cristaline part of it; of this take 31 grind it to a Subtile Powder in a Glass Mortar with a Glass Pestle. Put this into a Glass Bottle, and pour upon it a Quart of Fountain Water, stop the Bottle close, and let it stand thus for some Days, shaking it often, after its well fettled pour off the clear, and filtre it, take a Spoonful of this Liquor, which put into a Vial, and put to it two spoonsful of fair Water, shake the Vial well, and let the Patient Drink it in the Morning Fasting: As to the quickness of its Operation, and the making the Patient Hungry, I found it at first to agree with what Mr. Boyle says of it, but upon giving it three or four times, the Patients wou'd afterward complain of a Languidness, which was usher'd in by a Sickness at the Stomach, after this, they'd be attended with a Heat and Soreness of the Throat, immoderate Thirst, convulfive Motions of the Stomach, &c. Some of which Inconveniencies, wou'd continue for

for many Hours together. 'Twas upon Account of the Melancholy Reflections of bringing the Patients into such Disorders and their Unwillingness to endure such Fatigues, that I had never Courage enough to proceed in this Method. I cannot but fay, upon the Alteration I found in a Patient of mine, from the use of Six Doses of this Medicine, that it may as well as some other such churlish Remedies, cure some flat ulcerated Cancers where there's no Tumor to dissolve, in Persons that are capable of often repeating it, which I think is sufficient to put us upon further Enquiries, that we may be able to accomplish such Undertakings without bringing upon the Patients such a Train of mischievous Accidents. two spoonsful or dair Water, finke

Advertisement.

Here is now (by the same hand) preparing for the Press, Chirurgical Collections, which will confift of many of the Author's Observations, of uncommon Cases, and feveral which have been already communicated; these will be interspers'd among the most curious things relating to Surgery, taken from the Performances of the German Eruditi, in their Acta Lipsia, the Miscelan. Curiosa, Philosophical Transact. Memoirs for the Curious, Voyages, Travels, Natural Histories of Counties, and many other things that will afford useful Observations. In this Collection will be a great number of Figures of Cases, Instruments, Machines, &c. All which will be curioully Engrav'd on Copper Plates. The Author in this Undertaking has no other Design, than the Improvement of the Art, and will gratefully receive any communicated Observations.

N. B. The Introduction to this Piece, will give an Account of our famous English Writers in Physick and Surgery, for many hundred Years last past.

Books Printed for Geo. Strahan Bookfeller, at the Golden Ball, over against the Royal Exchange in Cornbill.

Octavo.

Presagium Medicum, or the prognostick Signs of acute Diseases, Establish'd by ancient Observation, and explain'd by the best modern Discoveries. By James Harvey. M.D.

The Art of curing Venereal Diseases, explain'd by natural and mechanical Principles. By Nicholas de Blegni, Surgeon to the French King. Done into En-

glish by f. H. M. D.

Sea Diseases, or a Treatise of their Nature, Causes and Cure: Also an Essay of Bleeding in Fevers. By Wm. Cockburn. M. D. and late Physician of his Majesty's Fleet. Fellow of the Royal Society.

An Account of the Nature, Causes, Symptoms,

and Cure of Loosenesses. By the same Author.

An Account of animal Secretion, the Quantity of Blood in the Humane Body, and the muscular motion.

By fames Keil, M. D.

The Practice of Physick, reduc'd to the ancient Way of Observations. Containing a just Parallel between the Experience of the Ancients, and the Hypothesis, of modern Physitians. With several new and curious Dissertations; particularly of the Tarantula Written in Latin by George Baglivi, M. D.

A Treatile of the Diseases of Tradesmen, shewing the various Influence of particular Trades upon the State of Health. With the best Methods to avoid correct it. Written in Latin by Bern. Ramazin, Pro-

fessor of Physick at Padua.

Chirurgical Remarks, occasion'd by the Death of a Child, whose Case was lately publish'd. To which is added an Account of a Wound of the Brain by a Bullet, with Resections thereon.

1884
