**IRON AND STEEL UTENSILS.**

The instruments of the Iron Age and those that date of steel and bronze are very hard to tell apart. The handles were of wood, but were sometimes being decorated and were generally made in single pieces, or the wood being fastened to the handle with iron rings and the handle or head being made of iron. Some have the handle of wood and the head of iron. Some have the handle of wood and the head of iron, but the handle is made of a single piece of wood and the head is made of iron. Some have the handle of wood and the head of iron, but the handle is made of a single piece of wood and the head is made of iron. Some have the handle of wood and the head of iron, but the handle is made of a single piece of wood and the head is made of iron. Some have the handle of wood and the head of iron, but the handle is made of a single piece of wood and the head is made of iron.

These instruments should have the names given to them according to their shape, function, or material. Some are made of iron, some of steel, some of bronze, some of wood, some of bone, some of stone, some of glass, some of other materials. Some are made of a single piece of material, some are made of several pieces. Some are made of a single piece of material, some are made of several pieces. Some are made of a single piece of material, some are made of several pieces. Some are made of a single piece of material, some are made of several pieces.

These are the names of the instruments shown in the photograph above. They are arranged in the order in which they are shown in the photograph. Some are made of iron, some of steel, some of bronze, some of wood, some of bone, some of stone, some of glass, some of other materials. Some are made of a single piece of material, some are made of several pieces. Some are made of a single piece of material, some are made of several pieces. Some are made of a single piece of material, some are made of several pieces.
