1877-1881
The handles of these hooks were by various and by various, some instruments in the other were in steel of the old type.

INSTRUMENTS FOR APPLICATING
LIGATURES.

1870
These forceps were used for the purpose of holding the ends of the ligatures together for the purpose of a suture.

1870
These were used for the purpose of holding the ends of the ligatures together for the purpose of a suture.

1870-1881
These are a great variety of probes. The probe, as well as the needle, was often a double instrument having a flattened apex of point at the top made for passing a suture or needle through the tissue. These were used for the purpose of holding the ends of the ligatures together for the purpose of a suture. Some of the probes are made of steel and some of brass. Some of the probes are made of iron and some of steel. Some of the probes are made of iron and some of steel. Some of the probes are made of iron and some of steel.
