**DIRECTIONS.**  
The Compartments of this Box are numbered and arranged in the order in which their contents will be wanted.

1 To stop bleeding, bind the india-rubber tube tightly round the limb, between the wound and the body.

2 Pick away pieces of clothes, dirt, &c., with forceps: The scissors may be wanted at any point in the dressing.

3 Wipe away blood, dirt, &c., with swabs. If grease is about wound and skin, thoroughly soak swab in car's petrol and wash it off.  
Car's petrol must not be used in artificial light.

4 Iodine. Break the point of tooth-stick and dip it in iodine, and apply to wound.

5 Then spread the paste gently over wound first, and then over parts around, by means of swabs on clips.

6 Cover up wound thus prepared by wrapping it round with the gauze.

7 Fix gauze on by bandages and strapping, as case may be.

8 Contents: (1) Rubber Bandage. (2) SAL VOLATILE.
