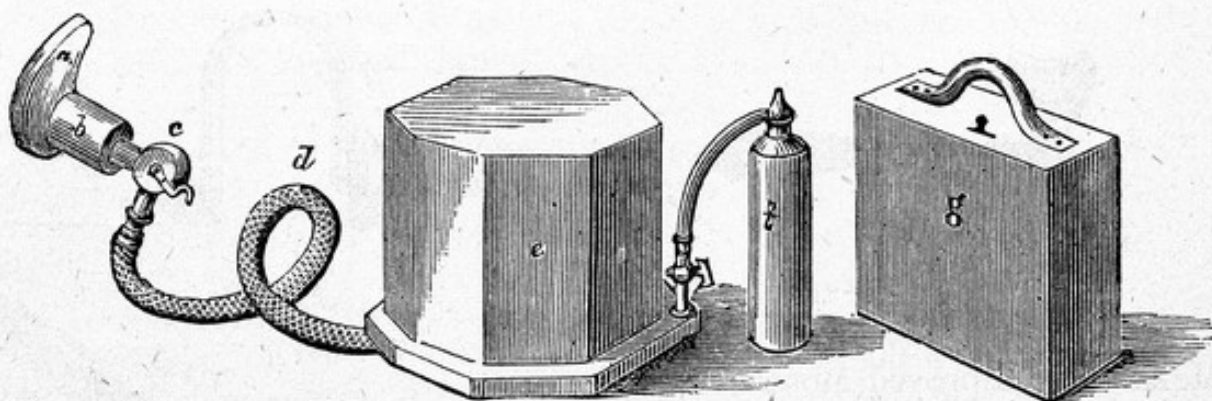

FIG. 338.

Edward's Patent Economizing Inhaler and Gas holder, complete, Fig. 338	3	5	0
Portable case for ditto	0	5	0

The Economizing Inhaler is constructed so that the gas exhaled from the patient is thoroughly filtered through lime; it then passes through the inhaling tube to the gas-holder, and back again at the next inspiration, thus being filtered a second time.

The gas is thus thoroughly purified from carbonic acid, and from all unhealthy emanations from the lungs, as soon as it passes from the

patient, and before it reaches the inhaling tube. On this account, and for other reasons, it claims superiority over all other apparatus of the kind. At the same time its low price places it within the reach of every operating dentist, whilst more complicated apparatus not only involve a large outlay, but also special instruction in their use.

	£	s.	d.
Coleman's Economizing apparatus	2	12	6
Face-pieces, three sizes, for ditto each	1	0	0
Ditto ditto for Clover's apparatus "	1	3	6
